High-quality 156-836 Exam Overviews & Passing 156-836 Exam is No More a Challenging Task

Our 156-836 exam questions boost 3 versions: PDF version, PC version, APP online version. You can choose the most suitable version of the 156-836 study guide to learn. Each version of 156-836 training prep boosts different characteristics and different using methods. For example, the APP online version of 156-836 Guide Torrent is used and designed based on the web browser and you can use it on any equipment with the browser. It boosts the functions of exam simulation, time-limited exam and correcting the mistakes.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q25-Q30):

NEW QUESTION # 25

During an upgrade, Is Multi-Version Clustering (MVC) supported?

- A. Maestro supports MVC or full connectivity upgrade as of R80.40.
- B. Yes, MVC is supported as of R81 for Maestro.
- C. No, Maestro does not support MVC.
- D. No. Maestro does not support MVC because ClusterXL is disabled during an upgrade.

Answer: A

NEW QUESTION # 26

In a dual MHO environment, MHO1 and MHO2 are connected to the SGM line cards in which way?

- A. MHO1 and MHO2 are connected to the SGMs using the Sync cable.
- B. MHO 1 is connected to the odd-numbered ports, while MHO2 is connected to even-numbered ports.
- C. MHO1 and MHO2 are connected to the line cards in any order administrators see fit.
- **D. MHO 1 is connected to the even-numbered ports, while MHO2 is connected to odd-numbered ports.**

Answer: D

Explanation:

The correct way to connect MHO1 and MHO2 to the SGM line cards in a dual MHO environment is to use the even-numbered ports for MHO1 and the odd-numbered ports for MHO2. This is to ensure that each SGM has two downlinks to each MHO, and that the downlinks are balanced across the different NICs and links.

This provides redundancy and high availability for the traffic flow between the SGMs and the MHOs.

NEW QUESTION # 27

Which distribution mode assigns packets to an SGM based solely on the packet destination IP?

- A. Manual mode
- B. User mode
- C. Auto-topology mode
- **D. Network mode**

Answer: D

Explanation:

Explanation

Network mode is the distribution mode that assigns packets to an SGM based solely on the packet destination IP. In this mode, the Orchestrator uses a hash function to map each destination IP to a specific SGM. This mode ensures that all packets with the same destination IP are processed by the same SGM, regardless of the source IP or port. This mode is suitable for scenarios where the destination IP is the main factor for load balancing, such as NAT or VPN.

NEW QUESTION # 28

When working with Maestro, what is the difference between using Clish and gClish?

- A. Clish commands apply to all UP SG members, by default. gClish commands apply to all SG members, by default.
- **B. Clish commands apply only to a specific SG member. gClish commands apply to all UP SG members, by default.**
- C. Clish commands are run on the SG members. gClish commands are run on the MHO and applied to all connected SG members in a specified group.
- D. Clish commands are for testing purposes only and cannot be saved, gClish commands apply to all SG members, by default.

Answer: B

Explanation:

Explanation

This is the correct answer because it describes the difference between using Clish and gClish when working with Maestro. Clish is the Check Point command line shell that allows users to configure and manage the SG members individually. gClish is the global

Click that allows users to run commands on all UP SG members of the current Security Group at once. UP SG members are the ones that are in the UP state and have the same policy installed as the SMO Master.

NEW QUESTION # 29

In a Maestro Dual Site environment, what is the definition of the term Active Site.

- A. There is no such thing as an active site. In a Dual Site environment, traffic is load balanced.
- B. The Active Site is the site where the SMO Master exists.
- C. The Active Site is the site that is not handling any traffic for the specific SG, but its connections are synced to its SGMs from the MHOs to be ready in the event of a failover.
- **D. The Active Site is the site currently handling the enforcement on traffic passing for a specific SG. Connections are synced within the SGMs in the Active Site.**

Answer: D

Explanation:

In a Maestro Dual Site environment, there are two sites that can host Security Group Members (SGMs) for each Security Group (SG). The Active Site is the one that is currently processing the traffic for a specific SG, while the Standby Site is the one that is ready to take over in case of a failover. The Active Site and the Standby Site can be different for different SGs, depending on the load balancing and failover policies. The Active Site and the Standby Site are synchronized by the Maestro Orchestrators (MHOs) using the Site-Sync port and VLANs.
