

# VMware 3V0-21.25 Exam Dumps Help You Achieve Success Faster

P.S. Free 2026 VMware 3V0-21.25 dumps are available on Google Drive shared by TestkingPass: <https://drive.google.com/open?id=1DDlxQyC2k9XJJ2RRsb73t7AjpHygLOk0>

Taking 3V0-21.25 practice exams is also important because it helps you overcome your mistakes before the final attempt. When we talk about the 3V0-21.25 certification exam, the VMware 3V0-21.25 practice test holds more scoring power because it is all about how you can improve your Advanced VMware Cloud Foundation 9.0 Automation (3V0-21.25) exam preparation. TestkingPass offers desktop practice exam software and web-based 3V0-21.25 Practice Tests. These 3V0-21.25 practice exams help you know and remove mistakes. This is the reason why the experts suggest taking the 3V0-21.25 practice test with all your concentration and effort.

The VMware 3V0-21.25 web-based practice test software is very user-friendly and simple to use. It is accessible on all browsers (Chrome, Firefox, MS Edge, Safari, Opera, etc). It will save your progress and give a report of your mistakes which will surely be beneficial for your overall 3V0-21.25 Exam Preparation.

## VMware 3V0-21.25 Online Training: Advanced VMware Cloud Foundation 9.0 Automation - TestkingPass Supplies you best Dumps Cost

You deserve this opportunity to win and try to make some difference in your life if you want to attend the 3V0-21.25 exam and get the certification by the help of our 3V0-21.25 practice braindumps. As we all know, all companies will pay more attention on the staffs who have more certifications which is a symbol of better understanding and efficiency on the job. Our 3V0-21.25 Study Materials have the high pass rate as 98% to 100%, hope you can use it fully and pass the exam smoothly.

## VMware Advanced VMware Cloud Foundation 9.0 Automation Sample Questions (Q21-Q26):

NEW QUESTION # 21

An organization uses a centralized external Configuration Management Database (CMDB) to track all infrastructure assets. Currently, when a new virtual machine (VM) is provisioned through VMware Cloud Foundation (VCF) Automation, operations teams are required to manually input associated metadata into the CMDB. An administrator is tasked with reducing the manual effort and increasing efficiency of this process using VCF Automation. Which three of the following can VCF Automation perform? (Choose three.)

- A. Create a webhook endpoint on VCF with payload containing the required metadata.
- B. Call a webhook endpoint on the CMDB API with payload containing the required metadata.
- C. Request additional metadata as input during the deployment of the blueprint.
- D. Configure a subscription that reacts to VM provisioning requests.
- E. Create a new event topic that creates a notification upon successful VM provisioning.

**Answer: B,C,D**

Explanation:

To automate CMDB updates in VCF 9.0, administrators leverage the Event Broker Service (EBS) and Custom Forms. First, the administrator can Request additional metadata as input during the blueprint request. This ensures that unique information, such as "Cost Center" or "Application ID," is captured directly from the user at request time. Second, the admin must Configure a subscription that specifically listens for the "Post-Provisioning" event topic. This subscription acts as the trigger for the automation logic. Finally, the subscription invokes an ABX action or Orchestrator workflow that is programmed to Call a webhook endpoint on the CMDB API. This call sends a JSON payload containing both the system-generated metadata (e.g., VM UUID, IP address) and the user-provided inputs directly to the CMDB. This "closed-loop" automation eliminates manual data entry, reduces human error, and ensures that the asset repository is updated in real-time as soon as the infrastructure is live.

#### NEW QUESTION # 22

An administrator is configuring RBAC policies in VMware Cloud Foundation (VCF) Automation to delegate access across multiple clusters. The administrator must ensure that:

- \* Cluster lifecycle operations (e.g., scaling) can only be performed by a designated operations group.
- \* Security policies at the NSX project level remain restricted to network administrators' group.

Which two role assignments meet these requirements? (Choose two.)

- A. Assign the Service Viewer role in VCF Automation to the operations group at the cluster scope.
- B. Assign the Cluster Administrator role in VCF Automation to the operations group at the cluster scope.
- C. Assign the Service User role in VCF Automation to the operations group at the cluster scope.
- D. Assign the Security Administrator role in NSX to the network administrators group at the project scope.
- E. Assign the Organization Owner role to the network administrators group at the tenant organization level.

**Answer: B,D**

Explanation:

VCF 9.0 introduces a more granular RBAC model to support complex operational requirements. To meet the first requirement regarding cluster lifecycle management, the administrator must assign the Cluster Administrator role to the operations group. This role provides the specific permissions needed to perform actions such as scaling, patching, and modifying the configuration of Supervisor or TKG clusters. By scoping this at the cluster level (or within the project containing those clusters), the operations group is empowered to maintain the resources without having broad administrative access to other organizational settings. For the second requirement, the Security Administrator role in NSX must be assigned to the network administrators group. By scoping this to the project, the network admins can manage distributed firewall rules, gateway policies, and security profiles specific to that project's VPCs while being prevented from interfering with the compute lifecycle managed by the operations team. This separation of duties is essential for large-scale enterprise deployments to prevent unauthorized security changes or accidental cluster disruptions.

#### NEW QUESTION # 23

An Organization Administrator for an AllApps Organization in VMware Cloud Foundation (VCF) Automation must determine which networks are used by deployed workloads.

How does the administrator view the networks?

- A. The NSX segments mapped to each workload are visible by expanding deployment details for each deployed workload in the Organization Portal.
- B. VPCs and connectivity profile assignments are visible in the Organization Portal, but the underlying NSX Tier-1 gateways and segments are not.

- C. The NSX Tier-1 gateway mappings for each workload in the Organization can be retrieved with `kubectl get vm`
- D. VPCs, connectivity profiles and the associated NSX segment and Tier-1 gateway details can be retrieved with `vcf-cli deployment get`.

**Answer: B**

**Explanation:**

The AllApps (AllApps) organization model in VCF 9.0 is built on the principle of high-level abstraction to simplify the developer experience. In this model, the Organization Portal presents networking through the lens of Virtual Private Clouds (VPCs) and Connectivity Profiles. The Organization Administrator can easily view which VPC a workload belongs to and what connectivity policies (such as public access or isolation) are applied. However, the underlying NSX implementation details—such as the specific Tier-1 gateways and segments automatically created by the Supervisor—are intentionally abstracted away from the organization-level view. This "cloud-style" visibility ensures that tenants can manage their application networking without being burdened by the complexity of the provider's physical or logical NSX fabric, which remains the exclusive domain of the Provider Administrator.

**NEW QUESTION # 24**

An organization administrator has been tasked with adding a certificate to their organization in VCF Automation. What three actions are required? (Choose three.)

The screenshot shows the VMware VCF Automation interface. On the left, under 'ACTION OPTIONS', there is a list of actions: 'Log into the Organization Portal.', 'Log into the Provider Portal.', 'Import the certificate in DER format.', 'Import the certificate into Fleet Management.', 'Import the private key.', 'Import the certificate in PEM format.', and 'Log into VCF Operations.'. On the right, under 'ACTIONS LIST', there is a list of actions: 'Log into the Organization Portal.', 'Import the private key.', and 'Import the certificate in PEM format.'. Two circular arrows, one pointing right and one pointing left, are positioned between the two lists, indicating a selection process.

**Answer:**

**Explanation:**

This is an annotated version of the screenshot above. The 'ACTION OPTIONS' list on the left has three items highlighted with green dashed boxes: 'Log into the Organization Portal.', 'Import the private key.', and 'Import the certificate in PEM format.'. The 'ACTIONS LIST' on the right has three items highlighted with red dashed boxes: 'Log into the Organization Portal.', 'Import the private key.', and 'Import the certificate in PEM format.'. The two circular arrows between the lists remain.

**Explanation:**

To add a certificate to an organization in VMware Cloud Foundation (VCF) Automation, the organization administrator must perform the following three required actions:

**Answer**

- \* Log into the Organization Portal.
- \* Import the private key.
- \* Import the certificate in PEM format.

In VCF Automation 9.0, managing identity and security at the tenant level is performed within the Organization Portal. This portal allows organization administrators to configure tenant-specific settings, including branding and certificates, independently of the provider.

The requirements for adding a certificate involve these key components:

- \* **Administrative Interface:** While global infrastructure certificates are managed in the Provider Portal, tenant-specific certificates used for securing an organization's internal services or custom domains are added through the Organization Portal.
- \* **Certificate Format:** Standard practice for these integrations is to use the PEM (Privacy Enhanced Mail) format, which is a base64 encoded text format widely supported for secure exchanges. The DER (Distinguished Encoding Rules) format is binary and typically not the primary requirement for these web-based portal imports.
- \* **Security Pair:** To establish a valid, secure connection, both the certificate itself and its associated private key must be imported into

the organization's identity store. The private key is essential for the decryption process and must be handled securely during the import process.

#### NEW QUESTION # 25

A VMware Cloud Foundation (VCF) Automation Administrator is tasked to enable VCF Automation with the following requirements:

- \* All companies are hosted within a single private cloud.
- \* RBAC (role-based access control) is enforced.
- \* Resource governance within companies.
- \* Segregation between companies.

What two actions must the VCF Automation Administrator perform to satisfy the requirements? (Choose two.)

- **A. Create and configure a VMApps Organization per company.**
- **B. Ensure that the vCenter instance has a Supervisor cluster enabled.**
- C. Create and configure an AllApps Organization per company.
- D. Deploy a VCF Operations Orchestrator server to enable multi-tenancy.
- E. Deploy a vCenter instance with a Supervisor cluster per company.

**Answer: A,B**

Explanation:

In VMware Cloud Foundation 9.0, multi-tenancy is structured around the concept of Organizations. To meet the requirement of hosting multiple companies within a single private cloud with strict segregation and governance, the administrator must utilize the VMApps Organization model. Unlike the AllApps model, which is highly optimized for modern containerized and VPC-driven workloads, the VMApps Organization is specifically designed for environments requiring traditional VM-centric segregation and access control while sharing underlying physical infrastructure. Enabling a Supervisor cluster on the vCenter instance is a foundational prerequisite for these advanced automation capabilities. The Supervisor provides the necessary integration between the vSphere compute layer and the VCF Automation control plane, allowing for the instantiation of the Namespace and Organization constructs that enforce RBAC and resource quotas. By configuring a VMApps Organization per company, the administrator ensures that each tenant has a distinct administrative boundary, private catalog, and isolated resource allocation, effectively satisfying the requirements for hard tenancy within a consolidated private cloud environment.

#### NEW QUESTION # 26

.....

TestkingPass customizable practice exams (desktop and web-based) help students know and overcome their mistakes. The customizable VMware 3V0-21.25 practice test means that the users can set the Advanced VMware Cloud Foundation 9.0 Automation (3V0-21.25) Dumps and time according to their needs so that they can feel the real-based 3V0-21.25 exam scenario and learn to handle the pressure.

**3V0-21.25 Dumps Cost:** <https://www.testkingpass.com/3V0-21.25-testking-dumps.html>

All in all, we hope that you can purchase our three versions of the 3V0-21.25 real exam dumps, On the other hand, I prepared with TestkingPass 3V0-21.25 Dumps Cost and I got 100% score on my very first try, which is simply amazing, TestkingPass 3V0-21.25 labs online and updated TestkingPass 3V0-21.25 audio guide are the specialized tools that can give you great and authenticated preparation for the 3V0-21.25 online computer based training and these tools can surely help and guide you in an amazing manner indeed, VMware 3V0-21.25 Online Training We keep promise that your information will be important secret, we respect your personal action honestly.

In a paint program, you can perform flood fills, in which you choose 3V0-21.25 a color and use a paint bucket-like tool to fill areas with color, Tips for Using Calendar, Contacts, Reminders, and Notes.

### Quiz VMware - 3V0-21.25 - Newest Advanced VMware Cloud Foundation 9.0 Automation Online Training

All in all, we hope that you can purchase our three versions of the 3V0-21.25 Real Exam dumps, On the other hand, I prepared with TestkingPass and I got 100% score on my very first try, which is simply amazing!

TestkingPass 3V0-21.25 labs online and updated TestkingPass 3V0-21.25 audio guide are the specialized tools that can give you

great and authenticated preparation for the 3V0-21.25 online computer based training and these tools can surely help and guide you in an amazing manner indeed.

We keep promise that your information will be important secret, we respect your personal action honestly, The 99% pass rate can ensure you get high scores in the 3V0-21.25 actual test.
