Salesforce Certified OmniStudio Developer Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which OmniScript Action element redirects the user outside the OmniScript?

- A. Remote Action
- B. HTTP Action
- C. Integration Procedure Action
- D. Navigate Action

Answer: D

NEW QUESTION # 32

In an Integration Procedure, a developer needs to perform a multi-step calculation on every element of an array. Based on best practices, what two methods are recommended?
Choose 2 answers

- A. Use a Decision Matrix Action to call a Decision Matrix.
- B. Use a List Action to merge the array elements together.
- C. Use a Set Values Element inside a Loop Block.
- D. Use an Expression Set Action to call an Expression Set.

Answer: C,D

Explanation:

A Set Values Element inside a Loop Block can be used to perform a calculation on each element of an array and store the result in a variable. An Expression Set Action can be used to call an Expression Set that contains one or more expressions to perform calculations on array elements. These two methods are recommended based on best practices for performing multi-step calculations on array elements.

NEW QUESTION # 33

Refer to the exhibit below. In this Integration Procedure structure, what Send JSON Path would you use to send the output of the ActionZ element to a Response Action?

- A. ActionZ:BlockY:BlockX
- B. BlockX:BlockY:ActionZ
- C. BlockX:BlockY:ActionAZ
- D. ActionZ:BlockY:BlockX

Answer: C

NEW QUESTION # 34

A developer examines data received from an external data source. The data is nested two levels down in the JSON structure. Which OmniStudio tool could the developer use to simplify this data?

- A. An HTTP Action Element
- B. An integration Procedure
- C. A DataRaptor Transform
- D. A guided workflow

Answer: C

Explanation:

Explanation

A DataRaptor Transform can simplify nested data by transforming it into a flat structure. The developer can use JSON paths to map the input data to the output data and define the output structure.

NEW QUESTION # 35

In an OmnoScript, a developer needs to configure a Disclosureelement to require user input only if the user already checked a Non-Disclosure Agreement Checkbox.

How should the developer configure the conditional view to meet this requirement?

- A. Disable read only if true
- B. Set element to require if true
- C. Show element if true
- D. Set element to optional if false

Answer: B
