DS0-001 Pdf Free - Learning DS0-001 Mode

All questions on our DS0-001 exam questions are strictly in accordance with the knowledge points on newest test syllabus. Also, our experts are capable of predicating the difficult knowledge parts of the DS0-001 exam according to the test syllabus. We have tried our best to simply the difficult questions of our DS0-001 Practice Engine to be understood by the customers all over the world. No matter the students, office staffs, even someone who know nothing about this subject can totally study it without difficulty.

CompTIA DataSys+ Certification Exam Sample Questions (Q89-Q94):

NEW QUESTION # 89

Which of the following NoSQL database types best categorizes MongoDB?

- A. Document
- B. Key-value stores
- C. Graph
- D. Column-oriented

Answer: A

Explanation:

The NoSQL database type that best categorizes MongoDB is document. Document databases are databases that store and manage data as documents, which are collections of fields and values in formats such as JSON (JavaScript Object Notation) or XML (Extensible Markup Language). Document databases do not use any schema or structure to organize data, but rather use identifiers or indexes to enable flexible and dynamic access to data based on fields or values.

Document databases are suitable for storing large amounts of complex or unstructured data that have variable attributes or nested structures. MongoDB is an example of a document database that uses JSON-like documents to store and query data. The other options are either different types of NoSQL databases or not related to NoSQL databases at all. For example, column-oriented databases are databases that store and manage data as columns rather than rows; graph databases are databases that store and manage data as nodes and edges that represent entities and relationships; key-value stores are databases that store and manage data as pairs of keys and values.

NEW QUESTION # 90

Which of the following scripts would set the database recovery model for sys.database?

- A.

```
select name, recoverymodel from sys.database where name='XYZ'  
USE[master]  
GO  
DROP DATABASE [xyz] SET RECOVERY FULL WITH NO_WAIT  
GO
```

- B.
- C.

```
select name, recoverymodel from sys.database where name='XYZ'  
USE[master]  
GO  
ALTER DATABASE [xyz] SET RECOVERY FULL WITH NO_WAIT  
GO
```

- D.

```
select name, recoverymodel from sys.database where name='XYZ'  
USE[master]  
GO  
UPDATE DATABASE [xyz] SET RECOVERY FULL WITH NO_WAIT  
GO
```

Answer: B

Explanation:

The script that would set the database recovery model for sys.database is option A. This script uses the ALTER DATABASE statement to modify the recovery model of the sys.database to full with no wait. The other options either have syntax errors, use incorrect keywords, or do not specify the recovery model correctly.

NEW QUESTION # 91

Which of the following is the preferred data structure for storing hierarchical data models?

- A. Queue
- B. Stack
- C. Tree
- D. Graph

Answer: C

Explanation:

A tree data structure is ideal for representing hierarchical data models, as it organizes data in parent-child relationships.

NEW QUESTION # 92

Refer to exhibit.

Given the following customer table:

ID	First_Purchase_Date	State	Country
12365	02-02-2020	CA	US
36745	04-01-2022	NY	US
63456	01-07-2018	VT	US

Which of the following ORM snippets would return the ID, state, and country of all customers with the newest customers appearing first?

- A.

```
result = session.execute(  
    select(Customer.ID, Customer.State, Customer.Country).  
    .order_by(Customer.First_Purchase_Date)  
)
```

- B.

```
result = session.execute(  
    select(Customer.ID, Customer.State, Customer.Country).  
    .order_by(Customer.First_Purchase_Date.desc())  
)
```

```
result = session.execute(  
    select(Customer.ID, Customer.State, Customer.Country)  
)
```

- C.
- D.

```
result = session.execute(  
    select(Customer.ID, Customer.State, Customer.Country).  
    .order_by(Customer.First_Purchase_Date.asc())  
)
```

Answer: C

Explanation:

The ORM snippet that would return the ID, state, and country of all customers with the newest customers appearing first is option C. This snippet uses the select method to specify the columns to be returned, the order method to sort the results by ID in descending order, and the all method to fetch all the records. The other options either have syntax errors, use incorrect methods, or do not sort the results correctly. Reference: CompTIA DataSys+ Course Outline, Domain 1.0 Database Fundamentals, Objective 1.2 Given a scenario, execute database tasks using scripting and programming languages.

NEW QUESTION # 93

Given the following value from a VARCHAR column that is used to store integer values:

12A

Which of the following is the best way for a DBA to increase the data quality for this column?

- A. Keep the value and change the column to integer.
- B. Correct the value and change it to integer.
- C. Keep the column as VARCHAR and correct the value.
- **D. Add a check constraint to the column and change it to int.**

Answer: D

NEW QUESTION # 94

.....

We can confidently say that Our DS0-001 training quiz will help you. First of all, our company is constantly improving our products according to the needs of users. If you really want a learning product to help you, our DS0-001 study materials are definitely your best choice, you can't find a product more perfect than it. Second, our DS0-001 learning questions have really helped a lot of people. Looking at the experiences of these seniors, I believe that you will definitely be more determined to pass the DS0-001 exam.
