ISC CISSP Dumps Full Questions - Exam Study Guide

Everyone wants to have a good job and decent income. But if they don't have excellent abilities and good major knowledge they are hard to find a decent job. Passing the test CISSP certification can make you realize your dream and find a satisfied job. Our study materials are a good tool that can help you pass the exam easily. You will feel convenient if you buy our product not only because our CISSP Exam Prep is of high pass rate but also our service is also perfect. What's more, our update can provide the latest and most useful CISSP exam guide to you, in order to help you learn more and master more.

ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q343-Q348):

NEW QUESTION # 343

What should happen when an emergency change to a system must be performed?

- A. The change must be performed immediately and then submitted to the change board.
- B. The change is performed and a notation is made in the system log.
- C. The change must be given priority at the next meeting of the change control board.
- D. Testing and approvals must be performed quickly.

Answer: A

Explanation:

In cases of emergency changes, the priority is to address the issue at hand immediately to prevent any potential impacts on the system or organization. After implementing the change, it should then be documented and submitted to the change control board for review and approval post-implementation. NEW QUESTION # 344

In a disaster recovery (DR) test, which of the following would be a trait of crisis management?

- A. Anticipate
- B. Wide focus
- C. Strategic
- D. Process

Answer: A

Explanation:

Crisis management is the process of planning and responding to unexpected events that can have a negative impact on an organization. One of the key traits of crisis management is the ability to anticipate potential problems and develop plans to mitigate their impact. This means being able to think ahead and identify potential risks, as well as having a plan in place to deal with them if they do occur.

NEW QUESTION # 345

When RAID runs as part of the operating system on the file server, it is an example of a:

- A. software implementation.
- B. hardware implementation.

- C. server implementation.
- D. network implementation.

Answer: A

Explanation:

When RAID runs as part of the operating system on the file server, it is an example of a software implementation. RAID can also be implemented as hardware. NEW QUESTION # 346

Which of the following is critical for establishing an initial baseline for software components in the operation and maintenance of applications?

- A. Software patching procedures
- B. Application monitoring procedures
- **C. Configuration control procedures**
- D. Security audit procedures

Answer: C

Explanation:

Configuration control procedures are critical for establishing an initial baseline for software components in the operation and maintenance of applications. Configuration control procedures are the processes and activities that ensure the integrity, consistency, and traceability of the software components throughout the SDLC.

Configuration control procedures include identifying, documenting, storing, reviewing, approving, and updating the software components, as well as managing the changes and versions of the components. By establishing an initial baseline, the organization can have a reference point for measuring and evaluating the performance, quality, and security of the software components, and for applying and tracking the changes and updates to the components. The other options are not as critical as configuration control procedures, as they either do not establish an initial baseline (A and C), or do not apply to all software components (D).
