These modules cover processes such as Event, Problem, Update, Service Request, Information, and Release, etc where ITSM Pro offers additional advantages for Performance Analytics, Analytical Intelligence, and Provider Manager Workspace and Service Owner Workspace.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q36-Q41):

NEW QUESTION # 36

Based on the following image, which of the following choices is also true about London Linux Servers?

- A. It is a CMDB Group with Dashboard Group type.
- **B. It is a CMDB Group with Health Group type.**
- C. It is a CMDB Group with Default Group type.
- D. It is a Datacenter Group in London.

Answer: B

Explanation:

London Linux Servers is a CMDB Group with Health Group type. A CMDB Group is a collection of configuration items (CIs) that share common characteristics or are related in some way¹. A Health Group is a type of CMDB Group that is used to monitor and measure the health of a specific set of CIs based on predefined rules and metrics². The image shows that London Linux Servers is selected from the CMDB Health Group List, which is a dropdown menu that displays all the Health Groups defined in the system³. The image also shows the Group Health tab, which displays the health scores and indicators for the selected Health Group. NEW QUESTION # 37

Which choice best describes a Functionality Definition?

- A. Defines what CI identifiers to use.
- B. Defines the IP addresses to discover.
- **C. Defines what protocols to detect from within a Behavior.**
- D. Defines what Behavior to use from a Discovery Schedule.

Answer: C

NEW QUESTION # 38

What pattern operation allows the transfer of a file from the MID Server to a target?

- A. Create Connection
- B. Put file
- C. Parse file
- **D. Manage Attachments**

Answer: D

NEW QUESTION # 39

The following shows part of the Windows OS - Servers pattern in Pattern Designer:

□ Which of the steps above use(s) a shared library?

- A. Step 25
- B. Step 26
- C. Neither step
- D. Both steps

Answer: A

Explanation:

Step 25 uses a shared library called Windows - Storage, which is a reusable component that can be invoked by multiple patterns to discover the storage information of Windows servers. A shared library is a collection of steps that can be referenced by a pattern name and can accept input parameters and return output values.

Shared libraries help to avoid duplication of code and simplify the maintenance of patterns.

* Windows - Storage shared library

NEW QUESTION # 40

Which choices are necessary to launch any pattern?(Choose two.)

- A. CI Classification
- B. Data Certification
- C. CI Type
- D. CI Serial Number Attribute

Answer: A,C

Explanation:

To launch any pattern, you need to specify the CI classification and the CI type. The CI classification determines the table where the discovered CI is stored in the CMDB, and the CI type defines the specific attributes and relationships of the CI. For example, if you want to discover a Windows server, you need to select the CI classification as `cmdb_ci_win_server` and the CI type as Windows Server. These choices are mandatory for any pattern, as they enable Discovery to identify and classify the CIs correctly.

1: Patterns and horizontal discovery, Available discovery patterns
