

Aruba Certified Campus Access Professional Exam

- Latest & Updated Exam Questions
- Subscribe to FREE Updates
- Both PDF & Exam Engine
- Download Directly Without Waiting

At QuestionsTube, you can read HPE7-A01 free demo questions in pdf file, so you can check the questions and answers before deciding to download the HP HPE7-A01 practice questions. These free demo questions are parts of the HPE7-A01 exam questions. Download and read them carefully, you will find that the HPE7-A01 test questions of QuestionsTube will be your great learning materials online. Share some HPE7-A01 exam online questions below.

P.S. Free 2026 HP HPE7-A01 dumps are available on Google Drive shared by Actual4test: https://drive.google.com/open?id=1GTTQsd1WzkJ5PSUL-TLdpwvBW1_I87zU

You can directly refer our HPE7-A01 study materials to prepare the exam. Once the newest test syllabus is issued by the official, our experts will quickly make a detailed summary about all knowledge points of the real HPE7-A01 exam in the shortest time. All in all, our HPE7-A01 Exam Quiz will help you grasp all knowledge points. Not only our professional expert have simplified the content of the subject for you to understand fully, but also our HPE7-A01 practice guide will help you pass the exam smoothly.

HPE7-A01 exam is an industry-recognized certification that demonstrates a professional's expertise in Aruba access solutions. It is designed for network engineers, administrators, and consultants who are responsible for designing, deploying, and managing enterprise-level wireless networks. Aruba Certified Campus Access Professional Exam certification validates the candidate's ability to configure and troubleshoot Aruba wireless networks, as well as their understanding of the latest industry standards and best practices. Earning the Aruba Certified Campus Access Professional certification can enhance an IT professional's career prospects and provide them with the knowledge and skills necessary to succeed in today's fast-paced IT environment.

Exam Questions for HP HPE7-A01 With Money Back Guarantee

We promise to provide a high-quality simulation system with advanced HPE7-A01 study materials. With the simulation function, our HPE7-A01 training guide is easier to understand and have more vivid explanations to help you learn more knowledge. You can set

time to test your study efficiency, so that you can accomplish your test within the given time when you are in the Real HPE7-A01 Exam. You will be confident if you have more experience on the HPE7-A01 exam questions!

HP HPE7-A01 exam is designed for IT professionals who want to demonstrate their expertise in implementing, configuring, and managing Aruba wireless networks in enterprise environments. HPE7-A01 exam is part of the Aruba Certified Mobility Associate (ACMA) certification track and is a prerequisite for the Aruba Certified Mobility Professional (ACMP) certification. HPE7-A01 Exam covers a wide range of topics such as WLAN fundamentals, ArubaOS and CLI, wireless LAN security, and troubleshooting.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q128-Q133):

NEW QUESTION # 128

You need to drop excessive broadcast traffic on an ingress port or an ArubaOS-CX switch. What is the best feature to use for this task?

- A. Rate limiting
- B. DWRR queuing
- C. Strict queuing
- D. QoS shaping

Answer: A

Explanation:

According to the Aruba Documentation Portal1, the ArubaOS-CX switch supports various features to control the ingress traffic on specific ports, such as rate limiting, QoS shaping, and access control. These features can help reduce the impact of excessive broadcast traffic on the network performance and availability.

This is because rate limiting is a feature that allows you to limit the inbound or outbound traffic on a port based on a percentage of the port capacity or a fixed amount of bytes per second. Rate limiting can help prevent broadcast storms by reducing the amount of broadcast packets that enter or leave a port

NEW QUESTION # 129

Your customer has asked you to assign a switch management role for a new user. The customer requires the user role to only have Web UI access to the System > Log page and only have access to the GET method for REST API for the /logs/event resource. Which default AOS-CX user role meets these requirements?

- A. administrators
- B. sysops
- C. auditors
- D. operators

Answer: D

NEW QUESTION # 130

Match the appropriate QoS concept with its definition. (Options may be used more than once or not at all.)

Best Effort Service	Class of Service	Answer Area
		
		A method for classifying network traffic at layer-2 by marking 802.1Q VLAN Ethernet frames with one of eight service classes
		A method for classifying network traffic at layer-3 by marking packets with one of 64 different service classes
		A method where traffic is treated equally in a first-come, first-served manner
		A method for classifying network traffic using access categories based on the IEEE 802.11e QoS standard

Additional options on the right: Best Effort Service, Class of Service, Differentiated Services, WMM

Answer:

Explanation:

Best Effort Service	Class of Service	Best Effort Service	A method for classifying network traffic at layer-2 by marking 802.1Q VLAN Ethernet frames with one of eight service classes
Differentiated Services	WMM	Differentiated Services	A method for classifying network traffic at layer-3 by marking packets with one of 64 different service classes
		Class of Service	A method where traffic is treated equally in a first-come, first-served manner
		WMM	A method for classifying network traffic using access categories based on the IEEE 802.11e QoS standard

Explanation

Best Effort Service	A method for classifying network traffic at layer-2 by marking 802.1Q VLAN Ethernet frames with one of eight service classes
Differentiated Services	A method for classifying network traffic at layer-3 by marking packets with one of 64 different service classes
Class of Service	A method where traffic is treated equally in a first-come, first-served manner
WMM	A method for classifying network traffic using access categories based on the IEEE 802.11e QoS standard

QoS concept: Class of Service Definition: 3) A method for classifying network traffic using access categories based on the IEEE 802.11e QoS standards
QoS concept: Differentiated services Definition: 2) A method for classifying network traffic at layer-3 or marking packets with one of 64 different service classes
QoS concept: WMM Definition: 4) A method for classifying network traffic using access categories based on the IEEE 802.11e QoS standards

NEW QUESTION # 131

A customer just upgraded aggregation layer switches and noticed traffic dropping for 120 seconds after the aggregation layer came online again. What is the best way to avoid having this traffic dropped given the topology below?

- A. Configure the linkup delay timer to 120 seconds, which will allow the right amount of time for the initial phase to sync
- B. Configure the linkup delay timer to exclude LAGS 101 and 102, which will allow time for routing adjacencies to form and to learn upstream routes
- C. Configure the linkup delay timer to 240 seconds to double the amount of time for the initial phase to sync
- D. Configure the linkup delay timer to include LAGS 101 and 102, which will allow time for routing adjacencies to form and to learn upstream routes

Answer: D

Explanation:

Explanation

The reason is that the linkup delay timer is a feature that delays bringing downstream VSX links up, following a VSX device reboot or an ISL flap. The linkup delay timer has two phases: initial synchronization phase and link-up delay phase.

The initial synchronization phase is the download phase where the rebooted node learns all the LACP+MAC+ARP+STP database entries from its VSX peer through ISLP. The initial synchronization timer, which is not configurable, is the required time to download the database information from the peer.

The link-up delay phase is the duration for installing the downloaded entries to the ASIC, establishing router adjacencies with core nodes and learning upstream routes. The link-up delay timer default value is 180 seconds. Depending on the network size, ARP/routing tables size, you might be required to set the timer to a higher value (maximum 600 seconds).

When both VSX devices reboot, the link-up delay timer is not used.

Therefore, by configuring the linkup delay timer to include LAGs 101 and 102, which are part of the same VSX device as LAG 201, you can ensure that both devices have enough time to synchronize their databases and form routing adjacencies before bringing down their downstream links.

NEW QUESTION # 132

Refer to the exhibit. A company has deployed 200 AP-635 access points. To but is not working as expected.

What would be the correct action to fix the issue?

Name (Profile)	Security	Access Type	Traffic forwarding mode	Network Enabled
secure_wireless	wpa3-aes-gcm	Role Based	Bridge	Yes
open_wireless	opensystem	Unrestricted	Bridge	Yes

- A. Change the SSID to WPA3-Enhanced Open
- B. Change the SSID to WPA3-Enterprise (CNSA)
- C. Change the SSID to WPA3-Enterprise (CCM)
- D. Change the SSID to WPA3-Personal

Answer: B

Explanation:

WPA3-Enterprise is a security mode that supports 802.1X authentication and encryption with either AES-CCM or AES- GCMP. WPA3-Enterprise also optionally adds usage of Suite-B 192-bit minimum-level security suite that is aligned with Commercial National Security Algorithm (CNSA) for enterprise networks. This mode provides the highest level of security and is suitable for government and financial institutions. The exhibit shows that the SSID is configured with WPA3- Enterprise (CCM), which uses AES-CCM as the encryption protocol. However, this mode is not compatible with some devices that require CNSA compliance. Therefore, changing the SSID to WPA3-Enterprise (CNSA) would fix the issue and allow all devices to connect to the network.
