

New C_S4CPB Test Testking & C_S4CPB Dump Collection

The customer is God. C_S4CPB learning dumps provide all customers with high quality after-sales service. After your payment is successful, we will dispatch a dedicated IT staff to provide online remote assistance for you to solve problems in the process of download and installation. During your studies, C_S4CPB study tool will provide you with efficient 24-hour online services. You can email us anytime, anywhere to ask any questions you have about our C_S4CPB Study Tool. At the same time, our industry experts will continue to update and supplement C_S4CPB test question according to changes in the exam outline, so that you can concentrate on completing the review of all exam content without having to pay attention to changes in the outside world.

Based on the credibility in this industry, our C_S4CPB study braindumps have occupied a relatively larger market share and stable sources of customers. Such a startling figure --99% pass rate is not common in this field, but we have made it with our endless efforts. The system of C_S4CPB Test Guide will keep track of your learning progress in the whole course. Therefore, you can have 100% confidence in our C_S4CPB exam guide. And you can have a try on our C_S4CPB exam questions as long as you free download the demo.

New C_S4CPB Test Testking | Professional SAP C_S4CPB Dump Collection: SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602)

Whereas the SAP C_S4CPB web-based version of our practice test is compatible with iOS, Android, Windows, Linux, and Mac. Additionally, you can take the SAP C_S4CPB web-based practice test online using Chrome, Firefox, Safari, MS Edge, Internet Explorer or any other popular browser.

SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2602) Sample Questions (Q19-Q24):

NEW QUESTION # 19

SIMULATION

Set up an Integration Scenario

Business Scenario

You are responsible for setting up the Bank Integration with File Interface (1EG). During an actual implementation, you would first download the Set-up Instructions for the business process from SAP Signavio Process Navigator. In this practical exam, all the information will be provided to you, so you do not need to download the Set-up Instructions.

Prerequisites

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Your Task

Create a Communication Arrangement for Finance - Account Receivable Bank Statement Integration with the information below and save.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a Communication Arrangement for the bank integration scenario using the communication system created in the previous task.

The required scenario is:

Scenario ID: SAP_COM_0316

Scenario Description: Finance - Account Receivable Bank Statement Integration This is the final configuration step in the integration scenario setup sequence.

Business Scenario Explanation

In the previous tasks, you created:

a Communication User

a Communication System

Now you must create the Communication Arrangement that links the communication scenario to the communication system.

In SAP S/4HANA Cloud, the communication arrangement defines:

which communication scenario is used,

which communication system is connected,

which inbound/outbound services are active,

and which technical settings are applied for the integration.

For this task, the communication arrangement is used for:

Finance - Account Receivable Bank Statement Integration

Scenario: SAP_COM_0316

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values provided.

Do not change spaces, underscores, or capitalization.

The communication system selected must be the one created in Task 14:

1EG_SYSTEM_#####

Required Values

Use the following values exactly as shown in the task image.

Example

If your suffix is 000013, then the values become:

Scenario = SAP_COM_0316

Arrangement Name = SAP_COM_0316_000013

Communication System = 1EG_SYSTEM_000013

Step 1: Open the app "Communication Arrangements"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the search bar or app finder.

Search for:

Communication Arrangements

Open the app.

Explanation:

This app is used to create and maintain communication arrangements for SAP communication scenarios.

Because the task explicitly asks to create a communication arrangement, this is the correct starting point.

Step 2: Start creating a new communication arrangement

Inside the Communication Arrangements app:

Click:

New

Explanation:

This starts the creation wizard for a new communication arrangement.

Step 3: Enter the communication scenario

In the Scenario field, enter:

SAP_COM_0316

Then confirm or continue.

Explanation:

This is the required SAP communication scenario for:

Finance - Account Receivable Bank Statement Integration

It is critical to use the exact scenario ID because the arrangement configuration is generated from this selection.

Step 4: Continue to the arrangement creation screen

After selecting the scenario:

Click Create

or

Click Continue

depending on the screen behavior.

Explanation:

This opens the detailed arrangement creation screen where the arrangement name and communication system are maintained.

Step 5: Enter the Arrangement Name

In the Arrangement Name field, enter:

SAP_COM_0316_#####

Example

If your suffix is 000013, enter:

SAP_COM_0316_000013

Explanation:

This is the technical/business name of the communication arrangement and must match the task exactly.

Step 6: Select the previously created Communication System

In the Communication System field:

Open the value help or selection list.

Select the communication system created in the previous task:

1EG_SYSTEM_#####

Example

If your suffix is 000013, select:

1EG_SYSTEM_000013

Explanation:

This step links the communication arrangement to the communication system that contains:

the technical host definition,

the communication user assignment,

and the inbound communication settings.

Without this link, the arrangement is incomplete.

Step 7: Review the automatically derived communication details

After selecting the communication system, SAP may automatically populate integration-related sections such as:

inbound communication user

authentication method

service endpoints

service URLs

Explanation:

These values are normally derived automatically from the selected communication scenario and communication system.

You usually do not need to manually change them unless the task explicitly requires it.

Step 8: Review all required values

Before saving, verify:

Scenario = SAP_COM_0316

Arrangement Name = SAP_COM_0316_#####

Communication System = 1EG_SYSTEM_#####

Explanation:

This final review ensures there are no typing errors or wrong system selections.

Step 9: Save the Communication Arrangement

Click:

Save

Explanation:

This finalizes the communication arrangement creation.

Without saving, the configuration does not exist and the integration setup is incomplete.

Step 10: Verify the saved arrangement

After saving, confirm that the arrangement shows:

Arrangement Name = SAP_COM_0316_#####

Communication System = 1EG_SYSTEM_#####

Scenario = SAP_COM_0316

scenario description:

Finance - Account Receivable Bank Statement Integration

Explanation:

This is the confirmation that the communication arrangement was created successfully and is ready for later use in the bank integration scenario.

Expected Result

After this task is completed successfully:

the communication arrangement exists,

it uses scenario SAP_COM_0316,

it has the correct arrangement name,

it is linked to the previously created communication system,

the arrangement is saved successfully.

NEW QUESTION # 20

SIMULATION

Create a Custom Business Role with Restrictions

Business Scenario:

You are building a custom business role with restrictions to ensure the end users assigned the role have only the minimum level of access necessary to complete their core job tasks. The end users are project managers based in the United States. They should only be able to create projects, edit projects, and access projects that are occurring in the United States. They should not be able to staff any resources outside of the United States. Write, Read, and Value Help access should be restricted to only the United States for all relevant fields.

Prerequisites:

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note: Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Use the template for the business role Project Manager - Professional Services (SAP_BR_PROJECT_MANAGER_PROF) to create a new business role with the following information:

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a custom business role for project managers in the United States by using the standard SAP template role Project Manager - Professional Services and then restricting the role so users only have the minimum access needed for their job.

The template role used is:

Template Business Role ID: SAP_BR_PROJECT_MANAGER_PROF

Template Business Role Description: Project Manager - Professional Services The new custom role must be created with exact values defined in the task.

Business Scenario Explanation

In this simulation, you are building a restricted custom role for project managers who work only in the United States.

The goal is to ensure that these end users:

can create and edit projects,

can access only projects occurring in the United States,

cannot work with projects or staffing outside the US,

have only the minimum level of authorization needed.

This is done in two major parts:

Create a new custom business role from the standard SAP template

Restrict the role values so only US-related data is allowed

Important Notes

Always replace ##### with the last 6 digits of your group number.

Every value must be entered exactly as shown.

Even one missing space or incorrect character can cause the simulation validation to fail.

You must also create and assign a launchpad space as part of the custom role creation.

Required Values for Role Creation

Use the following values exactly as shown in the task image.

Parameter

Value

New Business Role ID

BR_PROJECT_MANAGER_PROF_US_#####

New Business Role Description

Project Manager - Professional Services - US - #####

Option for Launchpad Spaces

Create and Assign Spaces Based on Space Templates

New Space ID

ZBR_PROJECT_MANAGER_PROF_US_#####

Activate IAM Apps

Yes (check the box)

Example

If your suffix is 000457, the values become:

BR_PROJECT_MANAGER_PROF_US_000457

Project Manager - Professional Services - US - 000457

ZBR_PROJECT_MANAGER_PROF_US_000457

Detailed Step-by-Step Procedure

Part 1: Open the standard template role

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is used to maintain standard and custom business roles.

Because this task requires creating a custom role from an existing template, this is the correct starting app.

Step 2: Search for the template role

Inside Maintain Business Roles:

In the search/filter area, search for:

SAP_BR_PROJECT_MANAGER_PROF

or

Project Manager - Professional Services

Open the standard SAP template role.

Explanation:

You must start from the standard template role because the task explicitly says to use the template for:

Project Manager - Professional Services

SAP_BR_PROJECT_MANAGER_PROF

Part 2: Create the custom role from the template

Step 3: Click "Create Derived Business Role"

On the template role page:

Click:

Create Derived Business Role

Explanation:

This function creates a customer-specific copy based on the standard SAP business role template.

It preserves the delivered role content but allows you to define your own role ID, description, restrictions, and launchpad space.

Step 4: Enter the custom role information

In the creation popup, enter the values exactly as follows:

Template = SAP_BR_PROJECT_MANAGER_PROF

New Business Role ID = BR_PROJECT_MANAGER_PROF_US_#####

New Business Role Description = Project Manager - Professional Services - US - ##### Option for Launchpad Spaces = Create and Assign Spaces Based on Space Templates New Space ID = ZBR_PROJECT_MANAGER_PROF_US_##### Activate

IAM Apps = checked Explanation:

These values define the new custom project manager role that will later be restricted to US-only access.

The space option is important because the task expects the role to include its own launchpad space.

Step 5: Confirm creation

Click OK

Explanation:

SAP now creates the custom role derived from the template and assigns the new launchpad space at the same time.

Part 3: Verify the newly created custom role

Step 6: Review the new custom role

After creation, SAP opens the new custom role.

Verify:

Business Role ID = BR_PROJECT_MANAGER_PROF_US_#####

Business Role Description = Project Manager - Professional Services - US - ##### Business Role Template ID =

SAP_BR_PROJECT_MANAGER_PROF Explanation:

This confirms the derived role was created correctly from the right SAP template.

Part 4: Maintain role restrictions

Step 7: Open "Maintain Restrictions"

On the custom role page:

Click:

Maintain Restrictions

Explanation:

This is the most important part of the task.

You are not only creating a role - you are also limiting the role so it only allows US-related values.

Step 8: Understand the rule for restriction maintenance

The PDF/task logic is:

Fields explicitly listed in the restriction table → keep them Restricted and enter the required values All other fields not listed in the task table → set them to Not Maintained Explanation:

This is essential.

If extra fields remain restricted or blank, the role may not validate correctly.

The safest approach is:

only maintain the required fields,

mark all unrelated fields as Not Maintained.

Part 5: Enter the required US restrictions

From your exercise run, the maintained values included restrictions such as:

Keep these kinds of fields restricted with US/1710 values where required Examples from your run:

Bank Country/Region Key

Read, Value Help = US

Value Help = US

Company Code

use 1710 only where the task table explicitly requires it

Purchasing Organization

use 1710 where required

Valuation Area

use 1710 where required

Explanation:

These are the exact business restrictions that make the role usable only for the intended geography and business scope.

Step 9: Set unrelated restriction fields to "Not Maintained"

For every field not included in the task's restriction list, choose:

Not Maintained

Examples from your screenshots included fields like:

Accounting Principle

Authorization Group for Business Partners

Billing Type

These should be Not Maintained unless they are explicitly listed in the task's required restriction table.

Explanation:

This removes unnecessary access and matches the task wording that all other fields should be set to Not Maintained.

Step 10: Save the restrictions

After all required values are entered and unrelated fields are marked Not Maintained:

Click Save

Explanation:

This saves the restriction profile of the role.

If you do not save here, the role will remain incomplete or in draft.

Part 6: Verify launchpad space and page creation

Step 11: Go to Launchpad Spaces

In the custom role:

Open the tab:

Launchpad Spaces

Verify that the assigned space exists:

ZBR_PROJECT_MANAGER_PROF_US_#####

Explanation:

Because you selected Create and Assign Spaces Based on Space Templates, SAP should have created and assigned the launchpad space automatically.

Step 12: Verify the created space

Open the assigned space and confirm:

the custom space exists,

it is customer-managed,

the pages are assigned correctly.

Explanation:

This proves that the new business role has its own launchpad structure as required by the task.

Expected Result

After this task is completed successfully:

a new custom role exists based on SAP_BR_PROJECT_MANAGER_PROF,

the role uses the exact required ID and description,

the role has a custom launchpad space,

IAM apps are activated,

restrictions are maintained for US-only access,

all irrelevant fields are set to Not Maintained,

the role is saved successfully.

NEW QUESTION # 21

SIMULATION

Business Scenario

You are working on an implementation project and need to assign yourself the Administrator business role to complete your job tasks. Follow the instructions below to assign the Administrator business role to your user.

Prerequisites Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Your Task 1.

Assign the Administrator (BR_ADMINISTRATOR) business role to your user and save.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Task 1: Assign the Administrator Business Role to Your User

Objective

The purpose of this task is to assign the standard SAP business role Administrator to your own business user so you can perform the required configuration and administration activities in SAP S/4HANA Cloud.

The required business role is:

Business Role ID: BR_ADMINISTRATOR

Business Role Description: Administrator

For your exercise, you must always replace ##### with the last 6 digits of your group number. In your case, this was done with your own group suffix during execution.

Why this task is required

In SAP S/4HANA Cloud, access to apps and functions is controlled through business roles.

Without the Administrator role, your user may not be able to:

open administration apps,

maintain configuration-related master data,

assign other roles,

proceed with later project tasks.

So this task is the first access-enablement step.

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to the system.

Use the search bar or app finder.

Search for:

Maintain Business Users

Open the app.

This app is used to maintain business users and assign or remove business roles.

Step 2: Search for your own user

Inside Maintain Business Users:

In the search/filter area, locate the field for User Name or search criteria.

Enter your own user ID.

Click Go.

For example, in your exercise you used your own SAP Learning user.

You must open your own business user because the Administrator role needs to be assigned to your personal user record.

Step 3: Open your user record

After the search results appear:

Click your user entry in the list.

Open the user details screen.

This takes you to the detailed maintenance page where business roles can be reviewed and assigned.

Step 4: Switch to Edit mode

In the business user detail screen:

Click Edit.

Without entering edit mode, the role assignment list is display-only and cannot be changed.

Step 5: Go to Assigned Business Roles

Inside your business user:

Open the tab:

Assigned Business Roles

Review the currently assigned roles.

This tab shows all business roles already assigned to your user and is the correct place to add new ones.

Step 6: Click Add

In the Assigned Business Roles section:

Click Add.

This opens the dialog:

Add Business Roles

The Add dialog is used to search and select standard SAP-delivered business roles.

Step 7: Search for the Administrator role

In the Add Business Roles popup:

In the field Business Role ID, enter:

BR_ADMINISTRATOR

Click Go.

Select the role:

Administrator

Business Role ID: BR_ADMINISTRATOR

This is the standard Administrator role required by the task.

You must select the exact standard role, not a custom role.

Step 8: Add the role

After selecting BR_ADMINISTRATOR:

Click OK or Apply, depending on the popup behavior.

Confirm that the role is added to the list of assigned business roles.

At this point the role is added to your draft changes, but not yet finally saved.

Step 9: Save the user

Back in the business user detail screen:

Click Save.

This is the final and mandatory step.

If you do not save, the Administrator role remains only in draft and is not actually assigned.

Step 10: Verify the assignment

After saving:

Check the Assigned Business Roles list.

Confirm that the Administrator role appears in the list:

BR_ADMINISTRATOR

Expected Result:

Your user now has the Administrator business role assigned successfully.

What to verify after completion

You should verify the following:

Your user record is saved successfully.

The role Administrator is visible in the assigned roles list.

No draft remains unsaved.

Later administration apps are available to your user.

NEW QUESTION # 22

SIMULATION

Set up an Integration Scenario

Business Scenario

You are responsible for setting up the Bank Integration with File Interface (1EG). During an actual implementation, you would first download the Set-up Instructions for the business process from SAP Signavio Process Navigator. In this practical exam, all the information will be provided to you, so you do not need to download the Set-up Instructions.

Prerequisites

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Your Task

Create a Communication User with the information listed below and save.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a new Communication User for the integration scenario Bank Integration with File Interface (1EG).

This communication user will later be used in the integration setup, especially when defining the communication system and communication arrangement.

Business Scenario Explanation

In this scenario, you are setting up the integration for:

Bank Integration with File Interface (1EG)

In SAP S/4HANA Cloud, technical communication between systems is usually handled through:

a Communication User

a Communication System

a Communication Arrangement

This task is the first step in that chain.

The communication user acts as the technical user that the system uses for integration-related authentication.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values shown in the task.

Do not change spaces, underscores, or capitalization.

The password should not be typed manually if the task says:

Have the system propose a password

Required Values

Use the following values exactly as shown in the task image.

Example

If your suffix is 000013, then the values become:

User Name = 1EG_COMM_USER_000013

Description = 1EG Communication User

Step 1: Open the app "Communication Users"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the search bar or app finder.

Search for:

Communication Users

or

Maintain Communication Users

Open the app.

Explanation:

This app is used to create and maintain technical communication users for integration scenarios.

This is the correct starting point because the task explicitly says to create a Communication User.

Step 2: Start creating a new communication user

Inside the Communication Users app:

Click:

New

Explanation:

This starts the creation of a new communication user record.

Step 3: Enter the User Name

In the new communication user screen, enter:

User Name = 1EG_COMM_USER_#####

Example

If your suffix is 000013, enter:

1EG_COMM_USER_000013

Explanation:

This is the technical identifier for the communication user.

It must match the task exactly.

Step 4: Enter the Description

In the Description field, enter exactly:

1EG Communication User

Explanation:

This is the functional description of the technical integration user.

It should be entered exactly as written in the task to avoid validation issues.

Step 5: Let the system propose the password

In the password section:

Do not manually type a password.

Click:

Propose Password

Explanation:

The task explicitly says:

Password = Have the system propose a password

So the correct action is to use the SAP-generated password instead of entering your own value manually.

Step 6: Review the generated password

After clicking Propose Password:

The system generates a password automatically.

If the system displays the password, note it down if needed for later integration steps.

Explanation:

In some cases, the proposed password may later be needed during communication setup or documentation.

Even if not needed later in the simulation, this confirms the correct procedure was followed.

Step 7: Save the Communication User

Click:

Save

Explanation:

This finalizes the creation of the communication user.

Without saving, the technical user will not exist and the later integration steps will fail.

Step 8: Verify the Communication User

After saving, confirm that the communication user exists in the list and displays the correct values:

User Name = 1EG_COMM_USER_#####

Description = 1EG Communication User

Explanation:

This confirms the task is complete and the user is ready to be used in the next integration setup tasks.

Expected Result

After this task is completed successfully:

the communication user exists,

the user name matches the required naming convention,

the description is correct,
the password was proposed by the system,
the user is saved successfully.

NEW QUESTION # 23

SIMULATION

Migrate Bank Data

Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Your Task

Assign the Configuration Expert - Data Migration (BR_CONFIG_EXPERT_DATA_MIG) business role to your user and save.

Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to assign the Configuration Expert - Data Migration business role to your own user so that you can use the migration cockpit and perform the bank data migration scenario using staging tables.

The required business role is:

Business Role ID: BR_CONFIG_EXPERT_DATA_MIG

Business Role Description: Configuration Expert - Data Migration

Business Scenario Explanation

In this scenario, you are responsible for migrating bank data into SAP S/4HANA Cloud Public Edition.

Because only a few banks need to be loaded, the chosen migration method is:

Migrate Data Using Staging Tables

Before you can use migration apps such as Migrate Your Data, your user must have the correct migration authorization.

That is why this task requires assigning the business role:

Configuration Expert - Data Migration

BR_CONFIG_EXPERT_DATA_MIG

Without this role, you may not be able to:

create migration projects,

open migration objects,

upload staging-table files,

validate and transfer data,

execute mapping tasks,

or run the migration itself.

Important Notes

Always replace ##### with the last 6 digits of your group number in later migration tasks.

Use the exact role ID required by the task:

BR_CONFIG_EXPERT_DATA_MIG

Save the user after role assignment.

Make sure the user is not left only in draft status.

Required Role

Field

Value

Business Role ID

BR_CONFIG_EXPERT_DATA_MIG

Business Role Description

Configuration Expert - Data Migration

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Maintain Business Users

Open the app.

Explanation:

This app is used to assign business roles to business users.

Since the task asks to assign a role to your own user, this is the correct starting point.

Step 2: Search for your own user

Inside Maintain Business Users:

In the search/filter area, enter your own user ID.

Click Go.

Explanation:

You must assign the migration role to your own user because you are the one who will execute the migration tasks.

Step 3: Open your user record

From the search results:

Click your user entry.

Open the business user details page.

Explanation:

This opens the screen where assigned roles can be reviewed and maintained.

Step 4: Switch to Edit mode

On the business user page:

Click Edit

Explanation:

Edit mode is necessary before the Assigned Business Roles list can be changed.

Step 5: Open the "Assigned Business Roles" tab

Inside the business user record:

Click:

Assigned Business Roles

Explanation:

This is the section where the new business role will be assigned.

Step 6: Click Add

In the Assigned Business Roles area:

Click Add

This opens the popup:

Add Business Roles

Explanation:

This popup allows you to search for and assign standard SAP business roles.

Step 7: Search for the migration role

In the Add Business Roles popup:

In the role search field, enter:

BR_CONFIG_EXPERT_DATA_MIG

Click Go

Select:

Configuration Expert - Data Migration

BR_CONFIG_EXPERT_DATA_MIG

Explanation:

This is the exact role required for the bank migration scenario.

Step 8: Add the role

After selecting the role:

Click OK or Apply

Explanation:

This adds the migration role to your user in draft mode.

Step 9: Save the user

Back on the business user page:

Click Save

Explanation:

This finalizes the assignment.

Without saving, the role will not be available for use in the migration tasks.

Step 10: Verify the role assignment

After saving, confirm that your assigned roles list includes:

Configuration Expert - Data Migration

BR_CONFIG_EXPERT_DATA_MIG

Explanation:

This verifies that your user is now authorized to work with migration projects and staging-table migration.

Expected Result

After this task is completed successfully:

your user has the role BR_CONFIG_EXPERT_DATA_MIG,

the role assignment is saved,

your user can proceed with the bank migration project tasks,

migration-related apps are available to your user.

NEW QUESTION # 24

.....

Our company is professional brand established for compiling C_S4CPB exam materials for candidates, and we aim to help you to pass the examination as well as getting the related C_S4CPB certification in a more efficient and easier way. Owing to the superior quality and reasonable price of our C_S4CPB Exam Materials, our company has become a top-notch one in the international market. Our C_S4CPB exam torrents are not only superior in price than other makers in the international field, but also are distinctly superior in many respects.
