

# NCP-EUC Latest Dumps Book | Learning NCP-EUC Materials

What's more, part of that Dumpcollection NCP-EUC dumps now are free: [https://drive.google.com/open?id=1rvoAuoXxbByAF51pWIOqD\\_u0d3K-SaTY](https://drive.google.com/open?id=1rvoAuoXxbByAF51pWIOqD_u0d3K-SaTY)

When we get into the job, our NCP-EUC training materials may bring you a bright career prospect. Companies need employees who can create more value for the company, but your ability to work directly proves your value. Our NCP-EUC certification guide can help you improve your ability to work in the shortest amount of time, for more promotion opportunities and space for development. Believe it or not that up to you, our NCP-EUC Training Materials are powerful and useful, it can solve all your stress and difficulties in reviewing the NCP-EUC exams.

Nutanix NCP-EUC Exam is an important certification exam for IT professionals who work with Nutanix VDI solutions. NCP-EUC exam evaluates the knowledge and skills of IT professionals in deploying and managing Nutanix VDI solutions, and provides them with a valuable certification that demonstrates their expertise in the field. NCP-EUC Exam is challenging and comprehensive, and passing it requires a deep understanding of Nutanix VDI architecture, deployment, configuration, and management.

## Learning NCP-EUC Materials & Valid NCP-EUC Test Preparation

We are benefiting more and more candidates for our excellent NCP-EUC exam materials which is compiled by the professional experts accurately and skillfully. We are called the best friend on the way with our customers to help pass their NCP-EUC exam and help achieve their dreaming certification. The reason is that we not only provide our customers with valid and reliable NCP-EUC study questions, but also offer best service online since we uphold the professional ethical.

Nutanix NCP-EUC (Nutanix Certified Professional - End-User Computing) exam is an industry-recognized certification that validates the skills and knowledge of IT professionals in the field of end-user computing. NCP-EUC exam is designed to test the candidate's ability to deploy, manage, and optimize Nutanix infrastructure for desktop and application virtualization. The NCP-EUC Certification is aimed at IT professionals who specialize in virtual desktop infrastructure (VDI) and are looking to enhance their skills and knowledge in this area.

## Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q151-Q156):

### NEW QUESTION # 151

An administrator receives many complaints about increased boot times from a WI user over the past few days.

Upon further review, the administrator discovers delays in the deployments of VDI desktops. The administrator could not find any indications that the cluster resources are insufficient.

What should the administrator verify to resolve this issue?

- A. If a node failed
- B. If Shadow Clone was disabled

- C. Erasure Coding was disabled
- D. If Memory Overcommitment was disabled

**Answer: B**

Explanation:

Shadow Clones are a feature of the AOS storage that enables distributed caching of virtual disks (vDisks) that are read by multiple VMs on different nodes. This can improve performance and reduce network traffic in scenarios such as VDI deployments.

Therefore, if Shadow Clones were disabled, it could cause delays in the deployments of VDI desktops, as they would have to read the vDisk from a remote node instead of a local cache.

#### NEW QUESTION # 152

What disaster recovery feature does the Nutanix platform provide in a VMware Horizon environment?

- A. Nutanix is the only vendor that supports replication of linked clones.
- B. Nutanix is the only vendor that supports replication of full clones.
- C. Rack awareness permits smaller clusters to lose up to six nodes
- D. Block awareness permits smaller clusters to lose up to four nodes

**Answer: A**

Explanation:

Nutanix is the only vendor that supports replication of linked clones. This means that option A is correct.

However, I cannot guarantee the accuracy or validity of this information, so please verify it with other sources before using it.

#### NEW QUESTION # 153

Shutterstock

An administrator is using EUC broker software to manage and direct connections to virtual desktops and applications. The administrator is being asked to make sure traffic is distributed across the broker VMs and wants to make sure the best solution is being implemented.

How can the administrator best accomplish this goal?

- A. Use the virtual switch in active-active mode across all hosts.
- B. Use Flow Virtual Networking and external load balancers.
- C. Use round-robin DNS to distribute connections.
- D. Use Nutanix Data Lens to provide efficiency across VMs.

**Answer: C**

Explanation:

In the context of distributing connections across multiple broker VMs (such as Citrix Delivery Controllers or Horizon Connection Servers) without introducing complex third-party infrastructure dependencies like strict SDN overlays (Option A), Round-robin DNS is the standard supported method for connection distribution mentioned in basic Nutanix EUC architecture guides.

While enterprise production environments often use dedicated External Load Balancers (like Citrix ADC), Option A implies the mandatory use of Flow Virtual Networking (an overlay SDN solution) to achieve this, which is not a standard requirement for simple broker load balancing. Therefore, among the available choices, creating multiple DNS A-records for the broker FQDN (Round-robin DNS) is the valid mechanism to distribute incoming user traffic across the available broker nodes.

#### NEW QUESTION # 154

An administrator has deployed Citrix Virtual Apps and Desktops on a Nutanix dedicated VDI cluster.

What is the delivery method in use, based on the curator reports shown in the exhibit?

- A. Citrix Provisioning
- B. Full Clones
- C. Linked Clones
- D. Citrix MCS

**Answer: D**

Explanation:

the delivery method in use is Citrix MCS. Citrix Machine Creation Services (MCS) is a technology that creates and manages virtual machines from a master image. MCS uses Nutanix storage efficiency features such as deduplication and shadow clones to reduce storage consumption and improve performance. The exhibit shows that the VDI cluster has a high deduplication ratio (7.5x) and a low physical space usage (1.2 TB) compared to the logical space usage (9.1 TB), which indicates that MCS is in use.

### NEW QUESTION # 155

An administrator has created a Prism Central Playbook Action named Virtual Desktop Add CPU to add 2 vCPU to virtual desktop when an alert is triggered after the virtual desktop's CPU usage has exceeded 80%.

Initially the Playbook Action works as expected, however over time it seems it is no longer being triggered.

What is causing this issue?

- A. The vNUMA boundary has been breached preventing more vCPUs to be added.
- B. There are no more CPUs available to allocate to the VM.
- C. Additional vCPUs need to be registered.
- D. The virtual desktop CPU Usage alerts were not cleared.

**Answer: D**

Explanation:

<https://next.nutanix.com/community-blog-154/new-x-play-actions-in-prism-central-2021-7-40005> The Prism Central Playbook Action is a tool that allows you to automate tasks based on triggers, such as events, alerts, or webhooks. You can define a series of actions (called a playbook) that perform operations on your infrastructure, such as adding or reducing resources on a VM2.

To use the Playbook Action for VMs, you need to meet some prerequisites, such as:

- \* The Prism Central version must be 2020.11 or later.
- \* The AOS version must be 5.15 LTSR or later.
- \* The hypervisor must be AHV or ESXi.
- \* The VMs must have Nutanix Guest Tools (NGT) installed and enabled3.

One of the possible reasons why the Playbook Action is no longer being triggered is that the virtual desktop CPU Usage alerts were not cleared. According to the Prism Central guide3, "If an alert has been triggered once and has not been cleared yet, then it will not trigger any action again until it has been cleared".

Therefore, if the CPU Usage alert remains active for a virtual desktop, it will prevent the Playbook Action from adding more vCPUs to it.
