## **Pass Guaranteed High-quality Mule-101 - Salesforce Certified MuleSoft Integration Foundations Test Online**

DumpsTests presents Mule-101 exam questions in a convenient PDF format for effective preparation for the Salesforce Certified MuleSoft Integration Foundations (Mule-101) exam. Salesforce Mule-101 exam questions PDF file is designed for easy comprehension, allowing you to download it onto various smart devices. Whether you possess a PC, laptop, Mac, tablet, or smartphone, accessing your Mule-101 Practice Exam Questions PDF anytime and anywhere is effortless.

## **Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q23-Q28):**

### **NEW QUESTION # 23**

What is a core pillar of the MuleSoft Catalyst delivery approach?

- A. Technology centralization
- B. Process thinking
- **C. Business outcomes**
- D. Scope reduction

**Answer: C**

Explanation:

MuleSoft Catalyst Pillars: The Catalyst methodology is built on three core pillars designed to drive successful digital transformation:

Business Outcomes: Defining clear KPIs and aligning technology with business goals6.

Technology Delivery: The actual implementation (Anypoint Platform).

Organizational Enablement: Building the C4E and training the team.

The Answer: "Business outcomes" is the only option listed that corresponds to one of these

**NEW QUESTION # 24**

Which type of communication is managed by a service mesh in a microservices architecture?

- A. Communication between microservices runtime administrators
- B. Communication between trading partner services
- C. Communication between microservices developers
- D. **Communication between microservices**

**Answer: D**

Explanation:

Service Mesh Definition: A service mesh is a dedicated infrastructure layer for handling service-to-service communication.

East-West Traffic: It is specifically designed to manage East-West traffic, which is the network traffic flowing inside the data center or cluster between different microservices.

Capabilities: It handles things like mutual TLS (mTLS) for security, retries, load balancing, and traffic control between these services without requiring changes to the application code itself.

**NEW QUESTION # 25**

An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.

- A. **Customer Relationship Management (CRM)**
- B. IT Service Management (ITSM)
- C. Business-to-Business (B2B)
- D. Supply Chain Management (SCM)

**Answer: A**

Explanation:

Customer Relationship Management (CRM): A CRM system (like Salesforce) is specifically designed to manage a company's interactions with current and potential customers5.

Key Functionality: It stores contact information, identifies sales opportunities, records service issues, and manages marketing campaigns-perfectly matching the requirement to "increase cross-selling" and "track prospect data"6.

Why others are incorrect:

SCM: Manages the flow of goods and services (logistics/inventory)7.

ITSM: Manages IT services (help desk tickets)8.

B2B: Refers to the exchange of products/services between businesses, not the system of record for prospect data9.

**NEW QUESTION # 26**

According to MuleSoft's API development best practices, which type of API development approach starts with writing and approving an API contract?

- A. Agile
- B. **Design-first**
- C. Implement-first
- D. Catalyst

**Answer: B**

Explanation:

Design-First: This approach dictates that the API Contract (the Specification, e.g., RAML/OAS) must be written, reviewed, and approved before any implementation code is written.

The Contract: The "Contract" serves as the agreement between the API provider and the consumer.

Why others are incorrect:

Implement-first: You write the code (Mule flows) first, and the contract is generated from the code (or ignored).

Catalyst: Is a broader delivery methodology, not specifically the "Contract-first" technical approach.

## NEW QUESTION # 27

A high-volume eCommerce retailer receives thousands of orders per hour and requires notification of its order management, warehouse, and billing systems for subsequent processing within 15 minutes of order submission through its website.

- A. Enterprise Data Warehouse (EDW)
- **B. Publish/Subscribe Messaging Bus (Pub/Sub)**
- C. Managed File Transfer (MFT)
- D. Extract Transform Load (ETL)

**Answer: B**

Explanation:

The Requirement: The key phrase is "notification... of order management, warehouse, and billing systems." This describes a One-to-Many communication pattern (Fan-out).

Pub/Sub (Publish/Subscribe): This pattern decouples the sender (eCommerce Site) from the receivers (Warehouse, Billing).

The eCommerce site publishes a single "Order Created" event to a topic (e.g., Anypoint MQ or JMS).

Multiple subscribers (Warehouse, Billing, OMS) listen to that topic and process the message independently and asynchronously.

Why others are incorrect:

ETL: Is typically batch-oriented and used for moving large data sets to a warehouse, not for near real-time event notifications.

MFT: Is for moving files, which is too slow and heavy for high-volume, individual order notifications.

## NEW QUESTION # 28

.....

How can our Mule-101 practice materials become salable products? Their quality with low prices is unquestionable. There are no better or cheaper practice materials can replace our Mule-101 exam questions as alternatives while can provide the same functions. The accomplished Mule-101 Guide exam is available in the different countries around the world and being testified over the customers around the different countries. They are valuable acquisitions to the filed.
