Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26
Which productivity advantage does Anypoint Platform have to both implement and manage an API?

- A. Automatic API governance
- B. Automatic API proxy generation
- C. Automatic API semantic versioning
- D. Automatic API specification generation

Answer: B

Explanation:
Anypoint Platform, MuleSoft's unified platform for API design and integration, offers several productivity advantages for both

implementing and managing APIs. Among these features, automatic API proxy generation is particularly beneficial. Here's a step-by-step explanation:

* API Implementation:
* Design Center: In the Design Center, users can create API specifications using RAML or OAS.
This environment provides tools to design and document APIs effectively.
* Exchange: After defining the API, it can be published to Anypoint Exchange where it can be shared and discovered by others within the organization.
* Automatic API Proxy Generation:
* When an API is published to Exchange, Anypoint Platform allows for the automatic creation of an API proxy. An API proxy acts as a facade for your backend API, providing a layer of abstraction and security.
* Advantages:
* Security: Protects backend services by exposing only necessary endpoints and handling authentication, authorization, and rate limiting.
* Traffic Management: Helps in managing traffic through throttling and caching.
* Monitoring: Facilitates monitoring and logging to track API usage and performance.
* This automation saves time and reduces the complexity of manual proxy setup, allowing developers to focus on core business logic.
* API Management:
* API Manager: Provides a dashboard to manage API policies, versions, and SLA tiers. Users can apply security policies, monitor traffic, and analyze API usage.
* Monitoring: Integrated with Anypoint Monitoring, users get insights into API performance and health, enabling proactive management.

NEW QUESTION # 27
As part of a growth strategy a supplier signs a trading agreement with a large customer The customer sends purchase orders to the supplier according to the ANSI X12 EDI standard and the supplier creates the orders in its ERP system using the information in the EDI document The agreement also requires that the supplier provide a new RESTful API to process requests from the customer for current product inventory levels from the supplier's ERP system.
Which two fundamental integration use cases does the supplier need to deliver to provide an end-to-end solution for this business scenario? (Choose two.)

- A. Streaming data ingestion
- B. Synchronized data transfer
- C. Sharing data with external partners
- D. User interface integration
- E. Data mashups

Answer: B,C

Explanation:
To deliver an end-to-end solution for the described business scenario, the supplier needs to address both EDI processing and providing real-time data through a RESTful API. Here's a detailed explanation:
* Sharing Data with External Partners:
* EDI Integration: The supplier needs to process ANSI X12 EDI purchase orders from the customer and convert them into a format suitable for the ERP system.
* Partner Integration: Establishing secure and reliable data exchanges with the customer is crucial for seamless transactions.
* Synchronized Data Transfer:
* Real-Time API: Providing a RESTful API to allow the customer to query current product inventory levels from the supplier's ERP system.
* Data Consistency: Ensuring that the data provided through the API is accurate and up-to-date, reflecting the current state of the ERP system.

NEW QUESTION # 28

A MuteSoft developer must implement an API as a Mule application, run the application locally, and execute unit tests against the running application Which Anypoint Platform component can the developer use to fulfill all of these requirements?

- A. Anypoint Studio
- B. Anypoint CLI
- C. API Manager
- D. API Designer

Answer: A

Explanation:

Anypoint Studio is the integrated development environment (IDE) provided by MuleSoft for designing, developing, and testing Mule applications. Here's how it fulfills the developer's requirements:
* API Implementation:
* Design and Development: Anypoint Studio provides a graphical interface to design and develop APIs as Mule applications using pre-built components and connectors.
* Running Applications Locally:
* Local Testing: Developers can run Mule applications locally within Anypoint Studio to test and debug them before deploying to production.
* Unit Testing:
* MUnit Integration: Anypoint Studio includes MUnit, MuleSoft's testing framework. Developers can create and execute unit tests directly within the IDE.
* Test Execution: These tests can be run against the locally running Mule application to validate functionality and ensure code quality.

NEW QUESTION # 29

A Kubernetes controller automatically adds another pod replica to the resource pool in response to increased application load Which scalability option is the controller implementing?

- A. Vertical
- B. Horizontal
- C. Down
- D. Diagonal

Answer: B

Explanation:

Kubernetes offers several scalability options to handle varying application loads. The scenario described involves adding another pod replica in response to increased load, which is a form of horizontal scaling. Here's a detailed explanation:
* Horizontal Scaling:
* Definition: Horizontal scaling, also known as scaling out, involves adding more instances (pods) to distribute the load and increase capacity.
* Implementation in Kubernetes: Kubernetes uses controllers like the Horizontal Pod Autoscaler (HPA) to automatically adjust the number of pod replicas based on observed CPU utilization or other select metrics.
* Benefits:
* Load Distribution: By adding more pod replicas, the load is evenly distributed, reducing the risk of any single pod being overwhelmed.
* Fault Tolerance: Horizontal scaling enhances fault tolerance and availability, as multiple pod replicas can handle requests if one fails.
* Automatic Scaling:
* Kubernetes Controller: The HPA continuously monitors the application load and adjusts the number of pod replicas accordingly, ensuring optimal performance.

NEW QUESTION # 30
What are two reasons why a typical MuleSoft customer favors a MuleSoft-hosted AnypointPlatform runtime plane over a customer-hosted runtime for its Mule application deployments? (Choose two.)

- A. increased application isolation
- B. Reduced application latency
- C. Reduced IT operations effort
- D. Increased application throughput
- E. Reduced time-to-market for the first application

Answer: C,E

Explanation:
Choosing a MuleSoft-hosted Anypoint Platform runtime plane offers several advantages, particularly in terms of deployment efficiency and operational management. Here's a detailed explanation of the selected reasons:
* Reduced Time-to-Market for the First Application:
* Pre-Configured Environment: MuleSoft-hosted Anypoint Platform provides a ready-to-use environment, which accelerates the deployment process.
* Ease of Use: Developers can quickly set up and deploy applications without the need for extensive infrastructure setup and configuration.
* Reduced IT Operations Effort:
* Managed Services: MuleSoft handles the infrastructure management, including updates, scaling, and maintenance, reducing the operational burden on the IT team.
* Focus on Development: IT teams can focus on developing and optimizing applications rather than managing runtime environments.
