

AWS-Developer考題寶典，AWS-Developer熱門考古題

P.S. KaoGuTi在Google Drive上分享了免費的、最新的AWS-Developer考試題庫：<https://drive.google.com/open?id=1474D40VbZQb3QBgZWus3X4yALoMd-Vo>

如果你使用了我們的Amazon的AWS-Developer學習資料資源，一定會減少考試的時間成本和經濟成本，有助於你順利通過考試，在你決定購買我們Amazon的AWS-Developer之前，你可以下載我們的部門免費試題，其中有PDF版本和軟體版本，如果需要軟體版本請及時與我們客服人員索取。

AWS認證開發人員 - 聯合考試涵括眾多主題，包括AWS核心服務、安全性、數據庫和部署。該考試旨在測試考生對AWS平台的理解以及他們使用AWS服務設計、開發和部署應用程式的能力。這項認證在行業中廣受推崇，也被許多雇主認可為開發人員在AWS方面專業技能的評量標準。

AWS-Developer 考試涵蓋了廣泛的主題，包括 AWS 核心服務、數據庫技術和應用部署。要參加考試，您需要至少有一年的 AWS 應用開發和維護經驗。您還應該對至少一種程式設計語言，如 Java、Python 或 Ruby，以及 AWS 服務，如 EC2、S3 和 RDS 有良好的理解。

>> AWS-Developer考題寶典 <<

有用的Amazon AWS-Developer考題寶典是行業領先材料&一流的AWS-Developer熱門考古題

我們KaoGuTi Amazon的AWS-Developer考試培訓資料使你在購買得時候無風險，在購買之前，你可以進入KaoGuTi網站下載免費的部分考題及答案作為試用，你可以看到考題的品質以及我們KaoGuTi網站介面的友好，我們還提供一年的免費更新，如果沒有通過，我們將退還全部購買費用，我們絕對保障消費者的權益，我們KaoGuTi提供的培訓資料實用性很強，絕對適合你，並且能達到不一樣的效果，讓你有意外的收穫。

最新的 AWS Certified Developer AWS-Developer 免費考試真題 (Q37-Q42):

問題 #37

A bookstore has an ecommerce website that stores order information in an Amazon DynamoDB table named BookOrders. The DynamoDB table contains approximately one million records.

The table uses OrderID as a partition key. There are no other indexes.

A developer wants to build a new reporting feature to retrieve all records from the table for a specified customer, based on a CustomerID property.

- **A. Create a DynamoDB global secondary index (GSI) on the table. Use CustomerID as the partition key. Use the specified CustomerID value to run a query on the table.**
- B. Create a DynamoDB local secondary index (LSI) on the table. Use CustomerID as the sort key. Run a PartiQL query on the table with a SELECT statement where CustomerID equals the specified CustomerID value.
- C. Create a DynamoDB global secondary index (GSI) on the table. Use CustomerID as the sort key. Use a filter expression to perform a scan operation on the table to match on the specified CustomerID value.
- D. Create a DynamoDB local secondary index (LSI) on the table. Use CustomerID as the partition key. Use the specified CustomerID value to run a query on the table.

答案： A

解題說明：

Comprehensive and Detailed Step-by-Step Explanation:

The requirement is to query records by CustomerID, which is not the current partition key (OrderID). To achieve this efficiently:

* Option A: Create a GSI with CustomerID as the Partition Key:

* A Global Secondary Index (GSI) allows developers to create a different partition key and optional sort key for querying the data.

* By creating a GSI with CustomerID as the partition key, the developer can query the table efficiently using CustomerID as the primary lookup key.

* This avoids scanning the entire table and matches the requirement.

* Why Other Options Are Incorrect:

* Option B: Using CustomerID as a sort key for the GSI and performing a scan operation is inefficient. Queries are optimized, but scans are not.

* Option C and D: Local Secondary Indexes (LSI) are only valid when the partition key remains the same as the base table. Since OrderID is the base table's partition key, using CustomerID as the partition key or sort key in an LSI is not valid.

問題 #38

A company wants to automate part of its deployment process. A developer needs to automate the process of checking for and deleting unused resources that supported previously deployed stacks but that are no longer used.

The company has a central application that uses the AWS Cloud Development Kit (AWS CDK) to manage all deployment stacks. The stacks are spread out across multiple accounts. The developer's solution must integrate as seamlessly as possible within the current deployment process.

Which solution will meet these requirements with the LEAST amount of configuration?

- A. In the central AWS CDK, write a handler function in the code that uses AWS SDK calls to check for and delete unused resources. Create an API in AWS Amplify. Use the API to attach the function code to an AWS Lambda function and to invoke the Lambda function when the deployment stack runs.
- B. In the central AWS CDK application, write a handler function in the code that uses AWS SDK calls to check for and delete unused resources. Create an AWS CloudFormation template from a JSON file. Use the template to attach the function code to an AWS Lambda function and to invoke the Lambda function when the deployment stack runs.
- C. In the AWS Lambda console write a handler function in the code that uses AWS SDK calls to check for and delete unused resources. Create an AWS CDK custom resource. Use the custom resource to import the Lambda function into the stack and to invoke the Lambda function when the deployment stack runs.
- **D. In the central AWS CDK application, write a handler function in the code that uses AWS SDK calls to check for and delete unused resources. Create an AWS CDK custom resource. Use the custom resource to attach the function code to an AWS Lambda function and to invoke the Lambda function when the deployment stack runs.**

答案： D

解題說明：

This solution meets the requirements with the least amount of configuration because it uses a feature of AWS CDK that allows custom logic to be executed during stack deployment or deletion. The AWS Cloud Development Kit (AWS CDK) is a software development framework that allows you to define cloud infrastructure as code and provision it through CloudFormation. An AWS CDK custom resource is a construct that enables you to create resources that are not natively supported by CloudFormation or perform tasks that are not supported by CloudFormation during stack deployment or deletion. The developer can write a handler function in the code that uses AWS SDK calls to check for and delete unused resources, and create an AWS CDK custom

resource that attaches the function code to a Lambda function and invokes it when the deployment stack runs. This way, the developer can automate the cleanup process without requiring additional configuration or integration. Creating a CloudFormation template from a JSON file will require additional configuration and integration with the central AWS CDK application. Creating an API in AWS Amplify will require additional configuration and integration with the central AWS CDK application and may not provide optimal performance or availability. Writing a handler function in the AWS Lambda console will require additional configuration and integration with the central AWS CDK application.

問題 #39

A user is planning to host a web server as well as an app server on a single EC2 instance which is a part of the public subnet of a VPC. How can the user setup to have two separate public IPs and separate security groups for both the application as well as the web server?

- A. Launch a VPC instance with two network interfaces. Assign a separate security group and elastic IP to them.
- B. Launch VPC with two separate subnets and make the instance a part of both the subnets.
- C. Launch a VPC with ELB such that it redirects requests to separate VPC instances of the public subnet.
- D. Launch a VPC instance with two network interfaces. Assign a separate security group to each and AWS will assign a separate public IP to them.

答案: A

解題說明:

If you need to host multiple websites(with different IPs) on a single EC2 instance, the following is the suggested method from AWS. Launch a VPC instance with two network interfaces

Assign elastic IPs from VPC EIP pool to those interfaces (Because, when the user has attached more than one network interface with an instance, AWS cannot assign public IPs to them.) Assign separate Security Groups if separate Security Groups are needed This scenario also helps for operating network appliances, such as firewalls or load balancers that have multiple private IP addresses for each network interface.

Reference: <http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/MultipleIP.html>

問題 #40

A user wants to access RDS from an EC2 instance using IP addresses. Both RDS and EC2 are in the same region, but different AZs. Which of the below mentioned options help configure that the instance is accessed faster?

- A. Configure the Private IP of the Instance in RDS security group
- B. Configuring the elastic IP of the instance in RDS security group
- C. Security group of EC2 allowed in the RDS security group
- D. Configure the Public IP of the instance in RDS security group

答案: A

解題說明:

If the user is going to specify an IP range in RDS security group, AWS recommends using the private IP address of the Amazon EC2 instance. This provides a more direct network route from the Amazon EC2 instance to the Amazon RDS DB instance, and does not incur network charges for the data sent outside of the Amazon network.

問題 #41

A user has set an IAM policy where it allows all requests if a request from IP 10.10.10.1/32. Another policy allows all the requests between 5 PM to 7 PM. What will happen when a user is requesting access from IP 10.10.10.1/32 at 6 PM?

- A. It will allow access
- B. It will deny access
- C. It is not possible to set a policy based on the time or IP
- D. IAM will throw an error for policy conflict

答案: A

解題說明:

With regard to IAM, when a request is made, the AWS service decides whether a given request should be allowed or denied. The evaluation logic follows these rules:

By default, all requests are denied. (In general, requests made using the account credentials for resources in the account are always allowed.) An explicit allow policy overrides this default.

An explicit deny policy overrides any allows.
