HP Aruba Certified Network Security Professional - HPE7-A02 Free Exam Questions

QUESTION NO: 21

A company issues user certificates to domain computers using its Windows CA and the default user certificate template. You have set up HPE Aruba Networking ClearPass Policy Manager (CPPM) to authenticate 802.1X clients with those certificates. However, during tests, you receive an error that authorization has failed because the usernames do not exist in the authentication source.

What is one way to fix this issue and enable clients to successfully authenticate with certificates?

- A. Configure rules to strip the domain name from the username.
- B. Change the authentication method list to include both PEAP MSCHAPv2 and EAP-TLS.
- C. Add the ClearPass Onboard local repository to the authentication source list.
- D. Remove EAP-TLS from the authentication method list and add TEAP there instead.

[Hide answers/explanation]   [Discussion 0]

Correct Answer: A [Vote an answer]

To fix the issue where authorization fails because the usernames do not exist in the authentication source, you can configure rules in HPE Aruba Networking ClearPass Policy Manager (CPPM) to strip the domain name from the username. When certificates are issued by a Windows CA, the username in the certificate often includes the domain (e.g., user@domain.com). ClearPass might not be able to find this format in the authentication source. By stripping the domain name, you ensure that ClearPass searches for just the username (e.g., user) in the authentication source, allowing successful authentication.

QUESTION NO: 22

You are deploying a virtual Data Collector for use with HPE Aruba Networking ClearPass Device Insight (CPDI). You have identified VLAN 101 in the data center as the VLAN to which the Data Collector should connect to receive its IP address and connect to HPE Aruba Networking Central.

Which Data Collector virtual ports should you tell the virtual admins to connect to VLAN 101?

- A. The one with the lowest MAC address
- B. The one with the highest port ID
- C. The one with the highest MAC address
- D. The one with the lowest port ID

[Hide answers/explanation]   [Discussion 0]

Correct Answer: D [Vote an answer]

When deploying a virtual Data Collector for HPE Aruba Networking ClearPass Device Insight (CPDI), it is essential to ensure that the correct virtual port is connected to the designated VLAN. In this case, VLAN 101 is used to receive the IP address and connect to Aruba Central. The best practice is to use the virtual port with the lowest port ID. This is typically the primary port used for management and network connectivity in virtual environments, ensuring proper network integration and communication.

QUESTION NO: 23

You need to set up an HPE Aruba Networking VIA solution for a customer who needs to support 2100 remote employees. The customer download their VIA connection profile from the VPNC. Only employees who authenticate with their domain credentials to HPE Aruba Net   **HAVE A QUESTION?**   CHAT NOW!
Manager (CPPM) should be able to download the profile. (A RADIUS server group for CPPM is already set up on the VPNC.) How do you configure the VPNC to
enforce that requirement?

After years of operation, our platform has accumulated a wide network of relationships, so that we were able to learn about the changes in the exam at the first time. This is a benefit that students who have not purchased HPE7-A02 exam guide can't get. The team of experts hired by Aruba Certified Network Security Professional Exam study questions constantly updates and supplements the contents of study materials according to the latest syllabus and the latest industry research results. We also have dedicated staff to maintain HPE7-A02 Exam Material every day, and you can be sure that compared to other test materials on the market, Aruba Certified Network Security Professional Exam study questions are the most advanced. With HPE7-A02 exam guide, there will not be a situation like other students that you need to re-purchase guidance materials once the syllabus has changed. HPE7-A02 exam material not only helps you to save a lot of money, but also let you know the new exam trends earlier than others.

HP HPE7-A02 certification exam is an excellent way for IT professionals to demonstrate their knowledge and skills in network security using Aruba products. By obtaining this certification, candidates can enhance their career prospects and demonstrate their proficiency in implementing and managing secure networks using Aruba products.

HP HPE7-A02 (Aruba Certified Network Security Professional) Certification Exam is designed for IT professionals who specialize in network security. Aruba Certified Network Security Professional Exam certification exam is offered by HP, a global leader in information technology, and is widely recognized as a benchmark for network security expertise. The HPE7-A02 Certification Exam is a comprehensive test of an IT professional's knowledge of network security concepts and their ability to implement these concepts in real-world scenarios.

HPE7-A02 Free Braindumps & HPE7-A02 Reliable Study Plan

If you are worried for preparation of your HPE7-A02 exam, so stop distressing about it because you have reached to the reliable source of your success. ValidTorrent is the ultimate solution to your all HP Designing and Implementing Cloud Data Platform Solutions related problem. It provides you with a platform which enables you to clear your HPE7-A02 Exam. ValidTorrent provides you HPE7-A02 exam questions which is reliable and offers you a gateway to your destination.

HPE7-A02 certification is highly regarded in the field of network security, as it demonstrates a high level of knowledge and expertise in the area of Aruba network security solutions. Certified professionals are recognized as experts in their field and are highly valued by employers. Aruba Certified Network Security Professional Exam certification is also a valuable asset for those who are looking to advance their careers in the field of network security, as it demonstrates a commitment to professional development and ongoing learning.

HP Aruba Certified Network Security Professional Exam Sample Questions (Q85-Q90):

NEW QUESTION # 85
A company is using HPE Aruba Networking Central SD-WAN Orchestrator to establish a hub-spoke VPN between branch gateways (BGWs) at 1444 site and VPNCs at multiple data centers.
What is part of the configuration that admins need to complete?

- A. In BGWs' groups, select the VPNCs to which to connect in a DC preference list.
- B. In BGWs' and VPNCs' groups, create default IKE policies for the SD-WAN Orchestrator to use.
- C. At the global level, create default IPsec policies for the SD-WAN Orchestrator to use.
- D. In VPNCs' groups, establish VPN pools to control which branches connect to which VPNCs.

Answer: A

Explanation:
When using HPE Aruba Networking Central SD-WAN Orchestrator to establish a hub-spoke VPN between branch gateways (BGWs) and VPN concentrators (VPNCs) at multiple data centers, admins need to configure the BGWs' groups by selecting the VPNCs to which they should connect in a Data Center (DC) preference list. This configuration ensures that branch gateways are properly directed to the preferred VPN concentrators, optimizing the hub-spoke VPN topology.
1.DC Preference List: This list allows administrators to prioritize which data center VPNCs the BGWs should connect to, ensuring efficient routing and redundancy.
2.Hub-Spoke Configuration: Properly setting the DC preference list is essential for establishing the desired hub-spoke VPN architecture.
3.Optimized Connectivity: This setup helps in optimizing traffic flow and maintaining connectivity between branches and data centers.

NEW QUESTION # 86
A company uses HPE Aruba Networking ClearPass Device Insight (CPDI) (the standalone application option). In the details for a generic device cluster, you see a recommendation for "Windows 8/10" with 70% accuracy.
What does this mean?

- A. CPDI has detected that these devices match about 70% of the system rule for defining "Windows 8/10" devices.
- B. CPDI has matched these devices against several, conflicting system rules. 70% of those rules are for "Windows 8/10" devices.
- C. CPDI has grouped this cluster with similar classified devices. 70% of those classified devices are "Windows 8/10."
- D. CPDI has used MAC OUI to group these devices together. The average device's MAC address matches 70% of the "Windows 8/10" OUI.

Answer: A

Explanation:
When HPE Aruba Networking ClearPass Device Insight (CPDI) shows a recommendation for "Windows 8
/10" with 70% accuracy for a generic device cluster, it means that CPDI has detected that these devices match about 70% of the system rule criteria for defining "Windows 8/10" devices. This percentage indicates the confidence level based on the observed characteristics and behavior of the devices, helping administrators understand the likelihood that these devices are indeed running Windows 8 or 10.

Reference: ClearPass Device Insight documentation provides details on how device classification and accuracy percentages are determined, explaining the matching process against system rules.

NEW QUESTION # 87
A company is using HPE Aruba Networking ClearPass Device Insight (CPDI) (the standalone application).
You have identified a device, which is currently
classified as one type, but you want to classify it as a custom type. You also want to classify all devices with similar attributes as this type, both already-discovered devices and new devices discovered later.
What should you do?

- A. Create a user rule from the Generic Devices page, select the desired attributes for the rule, and choose "Save."
- B. Create a user tag from the Generic Devices page, select the desired attributes for the tag, and save the tag.
- C. In the device details, select reclassify, create a user rule based on its attributes, and choose "Save & Reclassify."
- D. In the device details, select filter, create a user tag based on the device attributes, and save the tag.

Answer: C

Explanation:
When using HPE Aruba Networking ClearPass Device Insight (CPDI) and you need to reclassify a device to a custom type and apply this classification to all devices with similar attributes, both already discovered and newly discovered, you should follow these steps:
1.Navigate to the device details in CPDI.
2.Select the option to reclassify the device.
3.Create a user rule based on the desired attributes of the device.
4.Choose the "Save & Reclassify" option.
This process ensures that the device is reclassified according to the new custom type and that the rule is applied to all existing and future devices with matching attributes, maintaining consistent classification across the network.
Reference: The ClearPass Device Insight user guide includes detailed instructions on device classification, rule creation, and managing device attributes to maintain accurate network visibility and security.

NEW QUESTION # 88
A company wants HPE Aruba Networking ClearPass Policy Manager (CPPM) to respond to Syslog messages from its Palo Alto Next Generation Firewall (NGFW) by quarantining clients involved in security incidents.
Which step must you complete to enable CPPM to process the Syslogs properly?

- A. Enable Insight and ingress event processing on the CPPM server.
- B. Configure CPPM to trust the root CA certificate for the NGFW.
- C. Install a Palo Alto Extension through ClearPass Guest.
- D. Configure the Palo Alto as a context server on CPPM.

Answer: D

Explanation:
To enable HPE Aruba Networking ClearPass Policy Manager (CPPM) to process Syslog messages from a Palo Alto Next Generation Firewall (NGFW) and quarantine clients involved in security incidents, you need to configure the Palo Alto as a context server on CPPM. This setup allows CPPM to receive and understand the context of the Syslog messages sent by the Palo Alto NGFW, enabling it to take appropriate actions such as quarantining clients.
1.Context Server Configuration: Configuring the Palo Alto NGFW as a context server in CPPM ensures that CPPM can process and respond to Syslog messages effectively.
2.Security Incident Response: By understanding the context of the Syslog messages, CPPM can automatically trigger actions like client quarantine based on security incidents detected by the NGFW.
3.Integration: This integration enhances the overall security posture by enabling coordinated responses between the firewall and CPPM.

NEW QUESTION # 89
Which statement describes Zero Trust Security?

- A. Companies that support remote workers cannot achieve zero trust security and must determine if the benefits outweigh the cost.
- B. Companies should focus on protecting their resources rather than on protecting the boundaries of their internal network.
- C. Companies can achieve zero trust security by strengthening their perimeter security to detect a wider range of threats.
- D. Companies must apply the same access controls to all users, regardless of identity.

Answer: B

Explanation:
Zero Trust Security is a security model that operates on the principle that no entity, whether inside or outside the network, should be trusted by default. Instead, every access request is thoroughly verified before granting access to resources. This model emphasizes protecting resources rather than merely securing the network perimeter, acknowledging that threats can originate both inside and outside the network.
1.Resource Protection: Zero Trust focuses on securing individual resources, assuming that threats can bypass traditional perimeter defenses.
2.Verification: Every access request is authenticated and authorized regardless of the source, ensuring that only legitimate users can access sensitive resources.
3.Modern Security Approach: This model aligns with the evolving threat landscape where insider threats and advanced persistent threats are common.
