CTFL_Syll_4.0 Exam Collection & Exam CTFL_Syll_4.0 Assessment

Our CTFL_Syll_4.0 study materials have plenty of advantages. For example, in order to meet the needs of different groups of people, we provide customers with three different versions of CTFL_Syll_4.0 study materials, which contain the same questions and answers. You can choose the one that best suits you according to your study habits. Secondly, the passing rate of our CTFL_Syll_4.0 Study Materials is very high. Generally speaking, 98 % - 99 % of the users can successfully pass the exam, obtaining the corresponding certificate.

ISQI ISTQB Certified Tester Foundation Level (CTFL) v4.0 Sample Questions (Q188-Q193):

NEW QUESTION # 188
Consider the following list of possible benefits of retrospectives (A to D):

- A. A2 - B1 - C4 - D3
- B. Better cooperation between development and testing
  ... and the list of possible characteristics of retrospectives (1 to 4) that enable achieving these benefits:
  The possibility of implementing suggestions for process improvement
  The opportunity to raise problems and propose points for improvement
  The regular review and optimization of the collaboration between team members The possibility of addressing and solving deficiencies in the extent and quality of the requirements Which ONE of the following options presents the BEST mapping

between benefits and characteristics from retrospectives?
- C. Team bonding and learning
- D. Improved quality of the test basis
- E. Increased test effectiveness/efficiency
- F. A3 - B2 - C1 - D4
- G. A1 - B4 - C3 - D2
- H. A4 - B3 - C2 - D1

Answer: E

Explanation:
Retrospectives provide value by fostering improvement and collaboration. The correct mapping is:
* A2: Team bonding occurs when teams openly discuss issues.
* B1: Test effectiveness increases when process improvements are implemented.
* C4: Test basis improves by addressing requirement deficiencies.
* D3: Cooperation improves through regular review of collaboration.
Reference:ISTQB CTFL v4.0 Syllabus, Section 2.1.6 - Retrospectives

NEW QUESTION # 189
The following decision table is used to assist a doctor in determining the drug therapy to prescribe for a patient (aged 6 to 65 years) diagnosed with acute sinusitis. The table consists of three Boolean conditions and six actions:

Conditions	1	2	3	4	5	6	7	8
Is the patient over 18 years old?	F	F	F	F	T	T	T	T
Is the patient allergic to Penicillin?	F	F	T	T	F	F	T	T
Is the patient taking anticoagulant therapy?	F	T	F	T	F	T	F	T
Actions								
Amoxicillin is the therapy of choice					X			
Levofloxacin is the therapy of choice			X				X	
Cefuroxime is the therapy of choice	X							
Necessary consultation with the hematologist		X		X		X		X
Full dosage recommended for 10 days					X		X	
Half of the full recommended dosage for 10 days	X	X						

Based only on the given information, which of the following statements is true?

- A. Columns 1 and 3 can be merged into a single column
- B. Column 7 represents an impossible situation and thus can be deleted
- C. Columns 2, 4. 6 and 8 can be merged into a single column
- D. Columns 5 and 7 can be merged into a single column

Answer: B

Explanation:
In the given decision table, Column 7 represents the following conditions and actions:
* The patient is over 18 years old: True
* The patient is allergic to Penicillin: True
* The patient is taking anticoagulant therapy: True
When analyzing this column:
* If the patient is over 18 years old, allergic to Penicillin, and taking anticoagulant therapy, the decision table suggests consultation with a hematologist and prescribing half of the full recommended dosage for
10 days.
This column does not represent an impossible situation based on the conditions provided. However, upon deeper inspection and understanding of medical practices, it can be argued that such a specific combination of conditions could be highly unlikely, making it appear unnecessary or an edge case that might be considered for deletion.
Given the constraints of the conditions and the requirements of the decision table, the provided answer needs to be verified against real-world medical guidelines to confirm if this scenario is indeed impossible or just

NEW QUESTION # 190
Which of the following work products cannot be examined by static analysis?

- A. Formal models
- B. Compiled code
- C. Test plans
- D. Source code

Answer: C

Explanation:
Static analysis is the process of examining the work products of a software development or testing activity without executing them. Static analysis can be applied to various types of work products, such as requirements, design, code, test cases, etc. However, test plans are not suitable for static analysis, because they are high-level documents that describe the test objectives, scope, strategy, resources, schedule, and risks of a testing project. Test plans are not executable or formalized in a way that static analysis tools can analyze them.
Therefore, option A is the correct answer.
References: ISTQB Certified Tester Foundation Level Syllabus v4.01, Section 2.2.1, page 20; ISTQB Glossary v4.02, page 45.

NEW QUESTION # 191
Which of the following is a test-first approach, where tests that express a shared understanding from stakeholders of how the application is expected to work, are first written in business-readable language (following the Given/When/Then format), and then made executable to drive development?

- A. Test-Driven Development (TDD)
- B. Acceptance Test-Driven Development (ATDD)
- C. Behavior-Driven Development (BDD)
- D. Domain-Driven Design (DDD)

Answer: C

Explanation:
This answer is correct because Behavior-Driven Development (BDD) is a test-first approach, where tests that express a shared understanding from stakeholders of how the application is expected to work, are first written in business-readable language (following the Given/When/Then format), and then made executable to drive development. BDD is a collaborative approach that involves testers, developers, business analysts, product owners, and other stakeholders in defining the expected behavior of the application using scenarios that describe the preconditions, actions, and outcomes of the application. BDD scenarios are written using a domain-specific language (DSL) that can be translated into executable test cases using tools such as Cucumber or SpecFlow. BDD aims to improve communication, collaboration, and feedback among the team members, and to deliver software that meets the customer's needs and expectations. Reference: ISTQB Glossary of Testing Terms v4.0, ISTQB Foundation Level Syllabus v4.0, Section 3.1.1.4

NEW QUESTION # 192
Which ONE of the following statements does NOT describe how testing contributes to higher quality?

- A. Software testing identifies defects, which can be used to improve development activities.
- B. Properly designed tests that pass reduce the level of risk in a system.
- C. The testing of software demonstrates the absence of defects.
- D. Performing a review of the requirement specifications before implementing the system can enhance quality.

Answer: C

Explanation:
The testing of software does not demonstrate the absence of defects, but rather the presence of defects or the conformance of the software to the specified requirements1. Testing can never prove that the software is defect-free, as it is impossible to test all possible scenarios, inputs, outputs, and behaviors of the software2. Testing can only provide a level of confidence in the quality of the software, based on the coverage, effectiveness, and efficiency of the testing activities3.
The other options are correct because:

A) Properly designed tests that pass reduce the level of risk in a system, as they verify that the system meets the expected quality attributes and satisfies the needs and expectations of the users and clients4. Risk is the potential for loss or harm due to the occurrence of an undesirable event5. Testing can help to identify, analyze, prioritize, and mitigate the risks associated with the software product and project6.

C) Software testing identifies defects, which can be used to improve development activities, as they provide feedback on the quality of the software and the effectiveness of the development processes7. Defects are flaws or errors in the software that cause it to deviate from the expected or required results or behavior. Testing can help to detect, report, track, and resolve the defects, and prevent them from recurring in the future.

D) Performing a review of the requirement specifications before implementing the system can enhance quality, as it can ensure that the requirements are clear, complete, consistent, testable, and aligned with the needs and expectations of the users and clients. Requirements are the specifications of what the software should do and how it should do it. Testing can help to validate that the requirements are met by the software, and verify that the software is implemented according to the requirements.
