Our PCNSE PAN-OS guide braindumps are the most popular products in the market now. Just buy our PCNSE learning quiz, and you will get all you want.

Palo Alto Networks PCNSE (Palo Alto Networks Certified Security Engineer) exam is a certification program designed for IT professionals who specialize in Palo Alto Networks technology. PCNSE exam is intended to test the skills and knowledge of network security engineers who configure and maintain Palo Alto Networks Next-Generation Firewalls. Palo Alto Networks Certified Network Security Engineer Exam certification program is a highly respected and globally recognized credential that validates an individual's ability to design, deploy, configure, and manage Palo Alto Networks-based security solutions.

The PCNSE certification is designed to help professionals demonstrate their expertise in network security and Palo Alto Networks firewalls. Palo Alto Networks Certified Network Security Engineer Exam certification is recognized globally and is highly valued by employers looking to hire skilled cybersecurity professionals. The PCNSE certification can help professionals advance their careers and become eligible for high-paying job roles such as Security Engineer, Security Analyst, Security Consultant, and Firewall Administrator. Palo Alto Networks Certified Network Security Engineer Exam certification also provides access to the Palo Alto Networks Certified Network Security Engineer (PCNSA) certification, which is a prerequisite for the PCNSE Exam.

The PCNSE certification is highly valued by employers and industry professionals alike, as it demonstrates a candidate's ability to work with Palo Alto Networks technologies in a variety of settings. Palo Alto Networks Certified Network Security Engineer Exam certification is recognized globally, and holders of the certification can expect to earn higher salaries and have access to more job opportunities. Additionally, the certification is valid for two years, after which time candidates must recertify to maintain their credentials.

Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q154-Q159):

NEW QUESTION # 154

A network administrator wants to use a certificate for the SSL/TLS Service Profile. Which type of certificate should the administrator use?

- **A. server certificate**
- B. machine certificate
- C. client certificate
- D. certificate authority (CA) certificate

Answer: A

Explanation:

Use only signed certificates, not CA certificates, in SSL/TLS service profiles. <https://docs.paloaltonetworks.com/pan-os/10-1/pan-os-admin/certificate-management/configure-an-ssl-tls-service-profile.html>

NEW QUESTION # 155

An Administrator is configuring an IPSec VPN to a Cisco ASA at the administrator's home and experiencing issues completing the connection. The following is the output from the command:

What could be the cause of this problem?

- A. The shared secrets do not match between the Palo Alto firewall and the ASA
- B. The dead peer detection settings do not match between the Palo Alto Networks Firewall and the ASA
- C. The Proxy IDs on the Palo Alto Networks Firewall do not match the settings on the ASA.
- **D. The public IP addresses do not match for both the Palo Alto Networks Firewall and the ASA.**

Answer: D

Explanation:

<https://docs.paloaltonetworks.com/network-security/ipsec-vpn/administration/troubleshooting/test-vpn-connectivity>

NEW QUESTION # 156

Given the following snippet of a WildFire submission log, did the end user successfully download a file?

- A. Yes, because both the web-browsing application and the flash file have the 'alert' action.
- B. No, because the URL generated an alert.
- C. Yes, because the final action is set to "allow."
- **D. No, because the action for the wildfire-virus is "reset-both."**

Answer: D

Explanation:

Based on the snippet of the WildFire submission log provided, it appears that the end user was able to successfully download a file. The key indicator here is that the final action for the web-browsing application and the flash file is set to "allow." This means that despite any alerts or other actions taken earlier in the process, the ultimate decision was to allow the file to be downloaded.

NEW QUESTION # 157

The firewall determines if a packet is the first packet of a new session or if a packet is part of an existing session using which kind of match?

- A. 7-tuple match:
Source IP Address, Destination IP Address, Source port, Destination Port, Source User, URL Category, and Source Security Zone
- **B. 6-tuple match:
Source IP Address, Destination IP Address, Source port, Destination Port, Protocol, and Source Security Zone**
- C. 9-tuple match:
Source IP Address, Destination IP Address, Source port, Destination Port, Source User, Source Security Zone, Destination Security Zone, Application, and URL Category

- [illegible]
