Trend Deep-Security-Professional Practice Test - The Secret To Overcome Exam Anxiety

The latest technologies have been applied to our Deep-Security-Professional actual exam as well since we are at the most leading position in this field. You can get a complete new and pleasant study experience with our Deep-Security-Professional study materials. Besides, you have varied choices for there are three versions of our Deep-Security-Professional practice materials. At the same time, you are bound to pass the exam and get your desired certification for the validity and accuracy of our Deep-Security-Professional training guide.

Trend Micro Certified Professional for Deep Security Sample Questions (Q22-Q27):

NEW QUESTION # 22

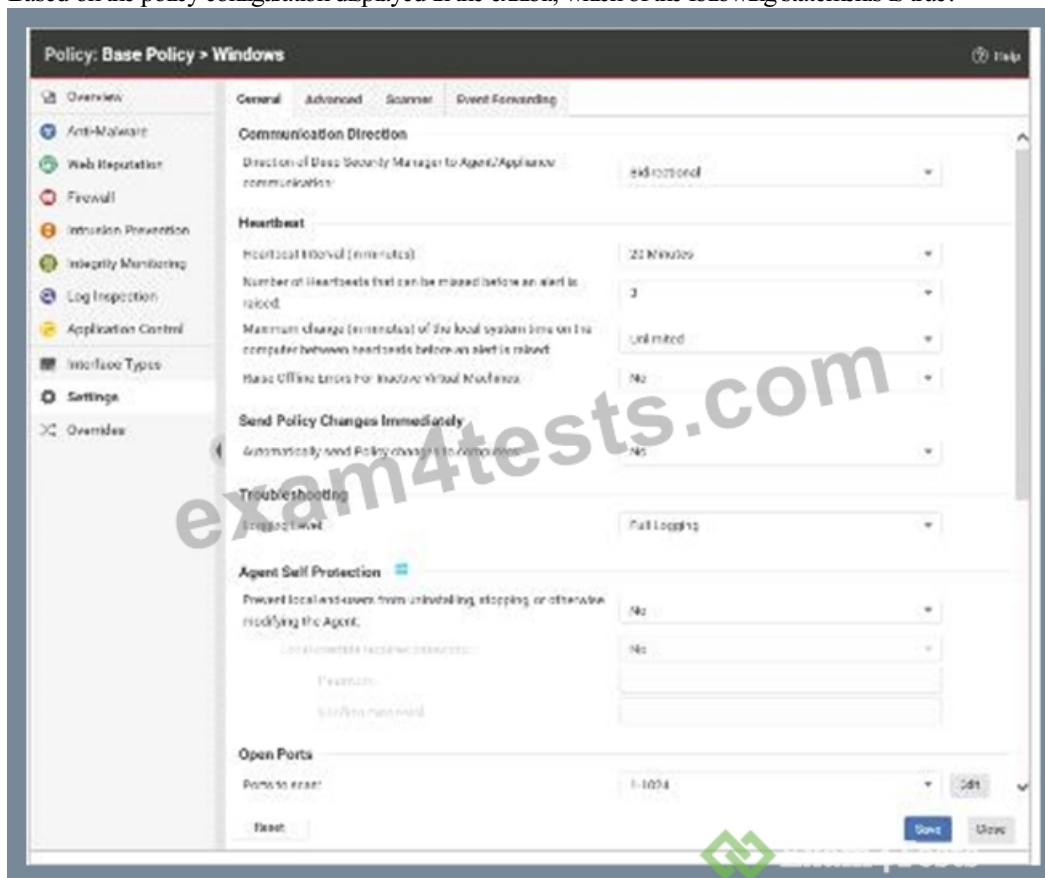

Which of the following statements is true regarding Deep Security Manager-to-database communication?

- A. Deep Security Manager-to-database traffic is not encrypted by default, but can be enabled by modifying settings in the ssl.properties file.
- B. Deep Security Manager-to-database traffic is encrypted by default but can be disabled by modifying settings in the db.properties file.
- C. Deep Security Manager-to-database traffic is encrypted by default, but can be disabled by modifying settings in the dsm.properties file.
- D. Deep Security Manager-to-database traffic is not encrypted by default, but can be enabled by modifying settings in the dsm.properties file.

Answer: D

NEW QUESTION # 23

Based on the policy configuration displayed in the exhibit, which of the following statements is true?

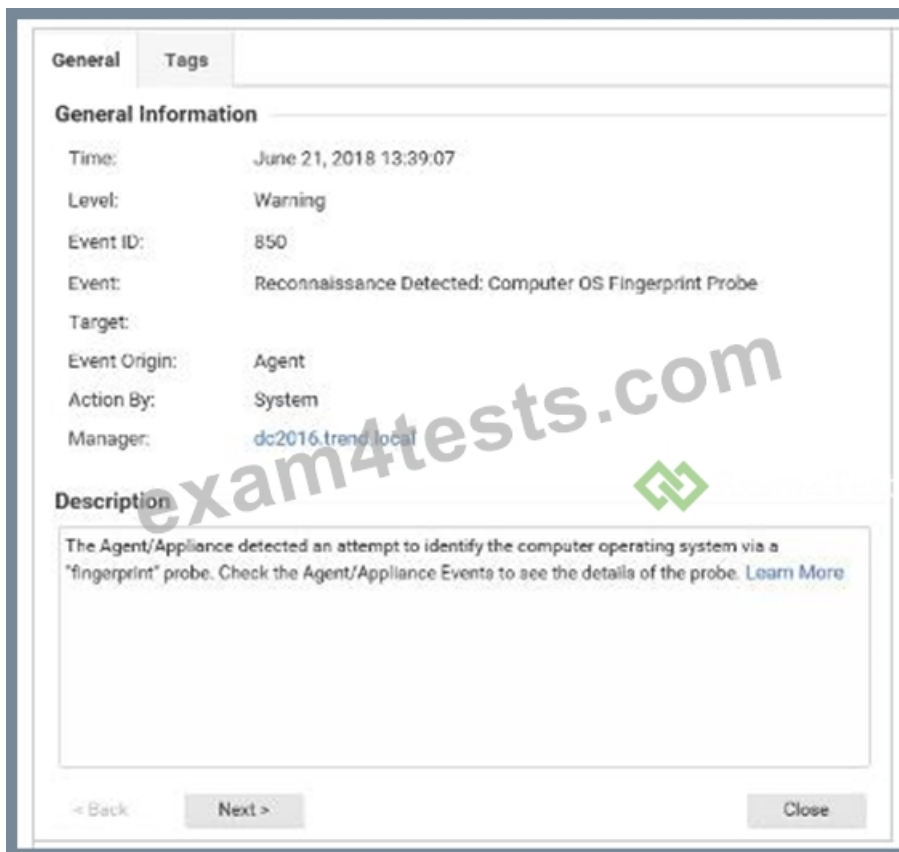

- A. Changes to any of the Deep Security policies will be send to the Deep Security Agents as soon as the changes are saved.
- B. Deep Security Agents will send event information to Deep Security Manager every 10 minutes.
- C. If the Deep Security Manager does not receive a message from the Deep Security agent every 20 minutes, an alert will be raised.
- D. Administrators with access to the protected Server will be able to uninstall the Deep Security Agent through Windows Control Panel.

Answer: D

NEW QUESTION # 24

Based on the details of event displayed in the exhibit, which of the following statements is false?

- A. You can instruct the Deep Security Agents and Appliances to block traffic from the source IP address for a period of time.
- B. The scan may be generated from an IP address which may be known to you. If so, the source IP address can be added to the reconnaissance whitelist.
- C. You can create a firewall rule to permanently block traffic from the originating IP address.
- D. The Intrusion Prevention Protection Modules must be enabled to detect reconnaissance scans.

Answer: B

NEW QUESTION # 25

Which of the following are valid methods for pre-approving software updates to prevent Application Control Events from being triggered by the execution of the modified software? Select all that apply.

- A. Once the inventory scan has run when Application Control is first enabled, there is no way to update the inventory to incorporate modified software.
- B. Edit the inventory database file (AC.db) on the Agent computer to include the hash of the newly updated software. Save the change and restart the Deep Security Agent. The software updates will now be approved.
- C. Maintenance mode can be enabled while completing the updates.
- D. Software updates performed by a Trusted Updater will be automatically approved.

Answer: C,D

Explanation:

Application Control can be configured to pre-approve updates either by performing them with a designated Trusted Updater (such as a software management tool or patch process) or by putting the agent in Maintenance Mode, during which changes are automatically approved. Manually editing the AC.db file is not a supported or recommended method.

NEW QUESTION # 26

The Intrusion Prevention Protection Module is enabled and a Recommendation Scan is run to identify vulnerabilities on a Windows Server 2016 computer. How can you insure that the list of recommendations is always kept up to date?

- A. Disabling, then re-enabling the Intrusion Prevention Protection Module will trigger a new Recommendation Scan to be run. New rules will be included in the results of this new scan.
- B. New rules are configured to be automatically sent to Deep Security Agents when Recommendation Scans are run.
- C. Recommendation Scans are only able to suggest Intrusion Prevention rules when the Protection Module is initially enabled.
- **D. Enable "Ongoing Scans" to run a recommendation scan on a regular basis. This will identify new Intrusion Prevention rules to be applied.**

Answer: D

Explanation:

Ongoing Scans is a feature that enables Deep Security to perform Recommendation Scans at a scheduled interval, ensuring new vulnerabilities or rule updates are continually identified and recommended for enforcement.

From the official documentation:

"Ongoing Scans enable Deep Security to regularly re-run recommendation scans, ensuring that newly discovered vulnerabilities and updated IPS rules are continuously recommended for application." References:
