As we all know, the latest Professional-Cloud-DevOps-Engineer quiz prep has been widely spread since we entered into a new computer era. The cruelty of the competition reflects that those who are ambitious to keep a foothold in the job market desire to get the Professional-Cloud-DevOps-Engineer certification. It's worth mentioning that our working staff considered as the world-class workforce, have been persisting in researching Professional-Cloud-DevOps-Engineer Test Prep for many years. Our Professional-Cloud-DevOps-Engineer exam guide engage our working staff in understanding customers' diverse and evolving expectations and incorporate that understanding into our strategies. Our latest Professional-Cloud-DevOps-Engineer quiz prep aim at assisting you to pass the Professional-Cloud-DevOps-Engineer exam and making you ahead of others.

Efficient Related Professional-Cloud-DevOps-Engineer Exams - Easy and Guaranteed Professional-Cloud-DevOps-Engineer Exam Success

Our website are specialized in offering customers with reliable Google braindumps and study guide, which written by a team of IT experts and certified trainers who enjoy great reputation in the IT field. All Professional-Cloud-DevOps-Engineer Test Questions are created based on the real test and followed by valid test answers and explanations. We guarantee you get high passing score with our Professional-Cloud-DevOps-Engineer exam prep.

Google Professional-Cloud-DevOps-Engineer Certification is a valuable credential for professionals seeking to advance their careers in DevOps engineering on the Google Cloud Platform. It is recognized by leading companies worldwide and can help professionals stand out in a competitive job market.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q198-Q203):

NEW QUESTION # 198

Your development team has created a new version of their service's API. You need to deploy the new versions of the API with the least disruption to third-party developers and end users of third-party installed applications.

What should you do?

- A. Announce deprecation of the old version of the API.
Introduce the new version of the API.
Contact remaining users on the old API.
Deprecate the old version of the API.
Turn down the old version of the API.
Provide best effort support to users of the old API.
- B. Announce deprecation of the old version of the API.
Contact remaining users on the old API.
Introduce the new version of the API.
Deprecate the old version of the API.
Provide best effort support to users of the old API.
Turn down the old version of the API.
- C. Introduce the new version of the API.
Announce deprecation of the old version of the API.
Deprecate the old version of the API.
Contact remaining users of the old API.
Provide best effort support to users of the old API.
Turn down the old version of the API.
- D. Introduce the new version of the API.
Contact remaining users of the old API.
Announce deprecation of the old version of the API.
Deprecate the old version of the API.
Turn down the old version of the API.
Provide best effort support to users of the old API.

Answer: C

NEW QUESTION # 199

You support the backend of a mobile phone game that runs on a Google Kubernetes Engine (GKE) cluster.

The application is serving HTTP requests from users. You need to implement a solution that will reduce the network cost. What should you do?

- A. Configure your network services on the Standard Tier.
- B. Configure a Google Cloud HTTP Load Balancer as Ingress.
- C. Configure the VPC as a Shared VPC Host project.
- D. Configure your Kubernetes cluster as a Private Cluster.

Answer: A

Explanation:

The Standard Tier network service offers lower network costs than the Premium Tier. This is the correct option to reduce the network cost for the application.

NEW QUESTION # 200

Your team is designing a new application for deployment into Google Kubernetes Engine (GKE). You need to set up monitoring to collect and aggregate various application-level metrics in a centralized location. You want to use Google Cloud Platform services while minimizing the amount of work required to set up monitoring. What should you do?

- A. Install the OpenTelemetry client libraries in the application, configure Stackdriver as the export destination for the metrics, and then observe the application's metrics in Stackdriver.
- **B. Publish various metrics from the application directly to the Stackdriver Monitoring API, and then observe these custom metrics in Stackdriver.**
- C. Emit all metrics in the form of application-specific log messages, pass these messages from the containers to the Stackdriver logging collector, and then observe metrics in Stackdriver.
- D. Install the Cloud Pub/Sub client libraries, push various metrics from the application to various topics, and then observe the aggregated metrics in Stackdriver.

Answer: B

NEW QUESTION # 201

You are managing the production deployment to a set of Google Kubernetes Engine (GKE) clusters. You want to make sure only images which are successfully built by your trusted CI/CD pipeline are deployed to production. What should you do?

- A. Enable Vulnerability Analysis on the Container Registry.
- B. Enable Cloud Security Scanner on the clusters.
- C. Set up the Kubernetes Engine clusters with Binary Authorization.
- **D. Set up the Kubernetes Engine clusters as private clusters.**

Answer: D

NEW QUESTION # 202

You support a user-facing web application. When analyzing the application's error budget over the previous six months, you notice that the application has never consumed more than 5% of its error budget in any given time window. You hold a Service Level Objective (SLO) review with business stakeholders and confirm that the SLO is set appropriately. You want your application's SLO to more closely reflect its observed reliability. What steps can you take to further that goal while balancing velocity, reliability, and business needs? (Choose two.)

- **A. Announce planned downtime to consume more error budget, and ensure that users are not depending on a tighter SLO.**
- B. Have more frequent or potentially risky application releases.
- **C. Implement and measure additional Service Level Indicators (SLIs) for the application.**
- D. Tighten the SLO to match the application's observed reliability.
- E. Add more serving capacity to all of your application's zones.

Answer: A,C
