2026 AD0-E605 Valid Dumps Files: Adobe Real-Time CDP Business Practitioner Professional - High-quality Adobe Vce AD0-E605 Torrent

You can easily download these formats of Adobe AD0-E605 actual dumps and use them to prepare for the Adobe AD0-E605 certification test. You don't need to enroll yourself in expensive AD0-E605 Exam Training classes. With the Adobe AD0-E605 valid dumps, you can easily prepare well for the actual Adobe AD0-E605 exam at home.

Adobe Real-Time CDP Business Practitioner Professional Sample Questions (Q34-Q39):

NEW QUESTION # 34

What is the key difference between RDBMS and Adobe RT-CDP's NoSQL data model?

- A. RT-CDP's NoSQL model uses schema-on-write instead of schema-on-read.
- B. RT-CDP's NoSQL model requires predefined relationships between tables.
- **C. RT-CDP's NoSQL model is designed to store hierarchical and unstructured data efficiently.**
- D. RT-CDP's NoSQL model supports only structured data.

Answer: C

NEW QUESTION # 35

A customer is bringing their brand data using Mobile and Web SDK into AEP to use for brand marketing using Adobe Real-Time CDP. The client has a license limited to 5 million Addressable Audience. What strategy should be adopted by the Data Architect to keep profile count in check and within license limits?

- **A. Pseudonymous TTL**
- B. Datalake Storage TTL
- C. Experience Event TTL
- D. Privacy API Deletes

Answer: A

Explanation:

In Adobe Experience Platform, managing the Addressable Audience count is critical for license compliance, especially when ingesting high volumes of top-of-funnel data via Web and Mobile SDKs. Pseudonymous TTL (Time-to-Live) is the primary architectural strategy used to automatically manage the lifecycle of profiles that lack a durable identity.

When users browse a website or app anonymously, the system creates profiles keyed off a pseudonymous identifier (like an ECID). Without a management strategy, these transient profiles persist indefinitely, quickly exhausting the 5 million profile license limit. By configuring a Pseudonymous TTL at the sandbox or identity level, the architect can instruct the Real-Time Customer Profiles service to automatically delete profiles that have not seen any activity within a specific timeframe (e.g., 14 or 30 days) and do not possess a "durable" identity (such as an Email or CRM ID).

Option A (Experience Event TTL) removes individual events but does not delete the profile record itself.

Option B (Privacy API) is intended for one-off GDPR/CCPA requests, not automated capacity management.

Option D (Datalake Storage TTL) only affects the long-term storage and not the Active Profile count used for licensing. By implementing Option C, the architect ensures that only active or known customers occupy the 5 million slots, while stale, anonymous fragments are purged to make room for new prospects.

NEW QUESTION # 36

A data engineer is working on defining a data usage policy via automatic enforcement and has configured dataset labels C1 and C2 to enforce the restriction. The data engineer has set up the marketing actions, enabled the policy, and while activating audiences to destinations, realizes that the policy violations did not occur.

How can the data engineer ensure that the data policy is enforced successfully?

- A. Exclude the labels C1 and C2 from any audience upon activation
- B. Assign labels C1 and C2 to the schema rather than to the dataset during activation
- **C. Include the labels C1 and C2 in the same audience upon activation**
- D. Include the labels C1 and C2 in separate audiences upon activation

Answer: C

NEW QUESTION # 37

Which part of Adobe Real-Time CDP is responsible for housing customer information collected from multiple sources?

- A. Identity service
- **B. Real-Time Customer Profile**
- C. Experience Data Model (XDM) System
- D. Graph Database

Answer: B

Explanation:

While several components of the Adobe Experience Platform work together, the Real-Time Customer Profile is the specific functional component responsible for housing and serving the consolidated customer information. It acts as the centralized "hub" where data attributes (from the Individual Profile class) and behavioral events (from the ExperienceEvent class) are aggregated. The Real-Time Customer Profile is not a traditional database but a highly optimized NoSQL data store designed for sub-second retrieval. It stores the "Active Profile," which is the result of the merging and stitching processes. This allows other services, such as the Segmentation Service and Activation destinations, to access a complete and up-to-date representation of any customer instantly. Option A, the Graph Database, is used specifically by the Identity Service (Option C) to manage the relationships between different identity namespaces (like linking an Email to a Cookie ID), but it does not store the full profile attributes like name or purchase history. Option D, the XDM System, is the formal language and structure (the "blueprint") that defines how data is modeled, but it is not the storage layer itself.

Therefore, the Real-Time Customer Profile is the correct entity that houses the actual unified customer data.

NEW QUESTION # 38

A retail company uses Adobe RT-CDP to manage customer data across multiple regions. To comply with local regulations, they must restrict data activation based on geographic location.

What governance feature should they implement?

- **A. Data Usage Labeling and Enforcement (DULE) policies tied to geographic data attributes.**
- B. Batch activation workflows for regional data.
- C. Static segmentation based on user preferences.
- D. Role-based access control to limit user access.

Answer: A

NEW QUESTION # 39

.....

Our Adobe Real-Time CDP Business Practitioner Professional (AD0-E605) PDF dumps format contains Adobe AD0-E605 questions that are real and updated. You can print these Adobe Real-Time CDP Business Practitioner Professional (AD0-E605) questions if you prefer an off-screen study. Otherwise, you can use this AD0-E605 PDF document from any location via your laptops, tablets, and smartphones. Time restrictions do not halt Adobe Real-Time CDP Business Practitioner Professional (AD0-E605) exam preparation as you can use Adobe Real-Time CDP Business Practitioner Professional (AD0-E605) exam dumps pdf whenever you have free time.
