Latest Hybrid-Cloud-Observability-Network-Monitoring Test Materials - Quiz 2026 SolarWinds Realistic Test Hybrid Cloud Observability Network Monitoring Exam Result

Our Hybrid-Cloud-Observability-Network-Monitoring practice materials are high quality and high accuracy rate products. It is all about their superior concreteness and precision that helps. Every page and every points of knowledge have been written from professional experts who are proficient in this line and are being accounting for this line over ten years. Many exam candidates attach great credence to our Hybrid-Cloud-Observability-Network-Monitoring practice materials. Our Hybrid-Cloud-Observability-Network-Monitoring practice materials do not need any ads, their quality has propaganda effect themselves.

SolarWinds Hybrid Cloud Observability Network Monitoring Exam Sample Questions (Q134-Q139):

NEW QUESTION # 134
What is the default amount of historical data needed for calculating capacity forecast?

- A. 1 to 90 days
- B. 7 to 180 day
- C. 1 to 30 days
- D. 7 to 30 days

Answer: B

NEW QUESTION # 135
Which two of the following requirements must be met to detect duplex mismatches? (Choose two.)

- A. nodes must be in "up" status
- B. nodes must be monitored
- C. nodes must be described in MIB
- D. nodes must be in 'warning' status

Answer: A,B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
To detect duplex mismatches:
The node must be monitored (i.e., managed in SolarWinds).
The node must be in "up" status, so SNMP data about interface status, speed, and errors can be polled and compared.
Description in MIB (A) is not necessary if the device is already SNMP-capable, and "warning" status (C) is a result, not a requirement.
Reference:
NPM Administrator Guide, "Requirements for Detecting Duplex Mismatches,"
"Only monitored and up-status nodes are eligible for duplex mismatch detection."

NEW QUESTION # 136
A NetPath probe is to be built to monitor the paths between two sites. No Windows servers are available to run the agent. Which two of the following options can be used to set up the probe? (Choose two.)

- A. Run the probe from the hybrid cloud observability (HCO) server.
- B. Install the agent on a red hat Linux server.
- C. Install the agent on a Windows 10 computer.
- D. Use the network device agent to run the probe from the router.

Answer: A,C

NEW QUESTION # 137
On which two of the following occasions do custom pollers need to be created? (Choose two.)

- A. monitor specific metric that is not out-of-the-box
- B. monitor unsupported object ID
- C. monitor special equipment
- D. monitor equipment that does not support WMI

Answer: A,C

NEW QUESTION # 138
Which three of the following are effects of enabling the "resolve IPv4 and IPv6 addresses to DNS hostname" option and disabling the "resolve and store IPv4 hostname immediately when a flow record is received" option? (Choose three.)

- A. amount of database memory used to store DNS information is reduced
- B. number of reads/writes on SQL server linked to name resolution is reduced
- C. DNS names will not be displayed on top domain resources/reports

- D. amount of database space used to store received flows is reduced

Answer: A,B,D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Enabling DNS resolution but not storing hostnames immediately results in:
Reduced database memory/storage used for DNS info, as hostnames aren't stored with each flow record.
Less database space used for flows, since flow records will reference IPs rather than resolved DNS names.
Reduced SQL server reads/writes since the platform does not immediately resolve and store hostnames with every received flow, decreasing load.
DNS names will still appear in reports where resolved dynamically, so option C is incorrect.
Reference:
NTA Administrator Guide, "Flow storage and DNS resolution options,"
"Disabling immediate hostname resolution and storage reduces database use and SQL operations."
