Competition has a catalytic effect on human development and social progress. Competition will give us direct goals that can inspire our potential and give us a lot of pressure. We must translate these pressures into motivation for progress. This road may not be easy to go. But with our ZDTA Exam Questions, you can be the most competitive genius in your field with the least time and efforts. As long as you follow with our ZDTA study guide, you will succeed for sure. Just come and try our ZDTA practice braindumps!

Zscaler ZDTA Exam Syllabus Topics:

Topic	Details
Topic 1	• Identity Services: This section of the exam measures skills of Identity and Access Management Engineers and covers foundational identity services including authentication and authorization protocols such as SAML, SCIM, and OIDC. Candidates should understand identity administration tasks and how to manage policies and audit logs within the Zscaler platform.
Topic 2	• Zscaler Zero Trust Automation: This part measures Automation Engineers on their ability to utilize Zscaler APIs, including the One API framework, for automating zero trust security functions and integrating with broader enterprise security and orchestration tools.

Topic 3	• Risk Management: This domain measures skills of Risk Managers and Security Architects in using Zscaler's comprehensive risk management suite. Candidates are expected to understand risk capabilities, dashboards, asset and financial risk insights, vulnerability management, deception tactics, identity protection, and breach prediction analytics.
Topic 4	• Connectivity Services: This domain evaluates Network Security Engineers on configuring and managing connectivity essentials like device posture assessment, trusted network definitions, browser access controls, and TLS • SSL inspection deployment. It also includes applying policy frameworks focused on authentication and enforcement for internet access, private access, and digital experience.
Topic 5	• Platform Services: This section measures skills of Cloud Infrastructure Engineers and focuses on the suite of Zscaler platform services. Key topics include advanced device posture assessments, TLS inspection mechanics, and the application of policy frameworks governing internet, private access, and digital experience services.
Topic 6	• Access Control Services: This area assesses Security Operations Specialists on implementing access control mechanisms including cloud app control, URL filtering, file type controls, bandwidth controls, and segmentation. It also covers Microsoft 365 policies, private application access strategies, and firewall configurations to protect enterprise resources.
Topic 7	• This section assesses Data Protection Officers on techniques to secure data across motion, SaaS, cloud, and endpoints using Zscaler's AI-driven data discovery and data protection technologies. It involves securing BYOD environments and understanding risk management to protect sensitive information.
Topic 8	• Zscaler Digital Experience: This section evaluates Network Performance Analysts on their knowledge of Zscaler Digital Experience (ZDX), including understanding the ZDX score, architectural overview, features, functionalities, and practical use cases to optimize digital user experiences.

Zscaler ZDTA Exam Prep Material Are Available In Multiple Formats

This ZDTA exam prep material has been prepared under the expert surveillance of 90,000 highly experienced IT professionals worldwide. This updated and highly reliable Prep4cram product consists of 3 prep formats: Zscaler Digital Transformation Administrator (ZDTA) dumps PDF, desktop practice exam software, and browser-based mock exam. Each format specializes in a specific study style and offers unique benefits, each of which is crucial to good Zscaler Digital Transformation Administrator (ZDTA) exam preparation. The specs of each Zscaler ZDTA exam questions format are listed below, you may select any of them as per your requirements.

Zscaler Digital Transformation Administrator Sample Questions (Q28-Q33):

NEW QUESTION # 28
When configuring an inline Data Loss Prevention policy with content inspection, which of the following are used to detect data, allow or block transactions, and notify your organization's auditor when a user's transaction triggers a DLP rule?

- A. VPN Credentials
- B. Index Tool
- C. DLP engines
- D. Hosted PAC Files

Answer: C

Explanation:
The inline DLP engines are responsible for inspecting content, identifying sensitive data matches, enforcing allow-or-block actions, and generating notifications (e.g., to your auditor) whenever a DLP rule is triggered.

NEW QUESTION # 29

Does the Cloud Firewall detect evasion techniques that would allow applications to communicate over non- standard ports to bypass its controls?

- A. Zscaler Client Connector will prevent evasion on the endpoint in conjunction with the endpoint operating system's firewall.
- B. The Cloud Firewall includes Deep Packet Inspection, which detects protocol evasions and sends the traffic to the respective engines for inspection and handling.
- C. As traffic usually is forwarded from an on-premise firewall, this firewall will handle any evasion and will make sure that the protocols are corrected.
- D. The Cloud Firewall includes an IPS engine, which will detect the evasion techniques and will just block the transactions as it is invalid.

Answer: B

Explanation:

The Cloud Firewall includes Deep Packet Inspection (DPI) capabilities that detect protocol evasion techniques where applications try to communicate over non-standard ports to bypass firewall controls. Once detected, the traffic is sent to the appropriate inspection engines for further handling and mitigation. This ensures that evasive traffic does not bypass security controls.

NEW QUESTION # 30

How would an administrator retrieve the access token to use the Zscaler One API?

- A. The administrator needs to send a POST request along with the required parameters to ZIdentity''s token endpoint.
- B. The administrator needs to logon to the ZIA portal to generate the access token with Super Admin role.
- C. The administrator needs to logon to the ZIA portal to generate the access token with API Admin role.
- D. The administrator needs to send a GET request along with the required parameters to ZIdentity's token endpoint.

Answer: A

Explanation:

You obtain the Zscaler One API access token by sending a POST request with your client_id, client_secret (and any other required parameters) to ZIdentity's OAuth2 token endpoint, which then returns a JWT you use for subsequent API calls.

NEW QUESTION # 31

When configuring Zscaler Private Access, what is the function of the Server Group?

- A. Maps Applications to FQDNs
- B. Maps FQDNs to IP Addresses
- C. Maps Applications to Application Groups
- D. Maps App Connector Groups to Application Segments

Answer: B

Explanation:

A Server Group holds the actual backend endpoints - defined by FQDNs (or IPs) and ports - and effectively maps those FQDNs to their IP addresses so ZPA knows which hosts to steer traffic toward.

NEW QUESTION # 32

An organization has more than one ZIA instance, each on different clouds. The organization is using the same login domain for both and upon login users are given this menu in ZCC asking which cloud they would like to join. What steps could an Administrator take to avoid having this menu appear?

- A. Federate the login domain between two different IDP instances.
- B. Customize an MSI version of the ZCC file specifying the CLOUDNAME variable.
- C. Create only one SAML integration with the desired ZIA instance.
- D. Customize an MSI version of the ZCC file specifying the USERDOMAIN variable.

Answer: B

Explanation:
To avoid prompting users with a cloud selection menu in the Zscaler Client Connector (ZCC), administrators shouldcustomize the MSI installation package with theCLOUDNAMEparameter. This setting ensures the ZCC automatically connects to the correct ZIA cloud instance without user intervention. The CLOUDNAME corresponds to the designated cloud name for the organization's ZIA tenant, effectively bypassing the prompt.
This is outlined under Zscaler's deployment and configuration instructions for ZCC.
