Quiz 2026 Avaya Unparalleled 71301T: Testing Avaya Aura Communication Applications Implement Center

To make sure your situation of passing the certificate efficiently, our 71301T practice materials are compiled by first-rank experts. So the proficiency of our team is unquestionable. They help you review and stay on track without wasting your precious time on useless things. They handpicked what the 71301T Study Guide usually tested in exam recent years and devoted their knowledge accumulated into these 71301T actual tests. We are on the same team, and it is our common wish to help your realize it. So good luck!

Avaya Aura Communication Applications Implement Sample Questions (Q76-Q81):

NEW QUESTION # 76

To which other component does the Avaya Aura Application Enablement Services (AES) Switch Connections connect?

- A. Avaya Aura Media Server (AAMS) using H.323
- B. Avaya Aura Communications Manager (CM) using SIP
- C. Avaya Aura Session Manager (SM) using SIP
- **D. Avaya Aura Communications Manager (CM) using H.323**

Answer: D

Explanation:

Adding a switch connection

The procedure include the following steps:

1. From the AE Services Management Console main menu, select Communication Manager Interface > Switch Connections.
2. On the Switch Connections page, in the Add Connection field, type a switch connection name (for example Switch1) For the Secure H323 Connection check box, do one of the following:

* For Communication Manager 6.3.6 or later and TLS for the H.323 Signaling Channel (normally associated with FIPS Mode), select the Secure H323 Connection check box.

* For any previous release of Communication Manager without TLS for the H.323 Signaling Channel, uncheck the Secure H323 Connection check box.
Etc.

NEW QUESTION # 77

What should be verified before running the `initTM -f` command on the Command Line Interface of Avaya Breeze platform (formerly known as Engagement Development Platform (EDP))?

- A. Verify that Avaya Breeze is configured as a Managed Element in Avaya Aura System Manager.
- B. Verify that Avaya Breeze is licensed.
- C. Verify that an enrollment password is configured on System Manager and that it has not expired.
- D. Verify that a valid Certificate is installed on the Avaya Breeze instance.

Answer: C

Explanation:

The `initTM` (Initialize Trust Management) command is used to establish the trust relationship between the Avaya Breeze platform and the Avaya Aura System Manager (SMGR).

Trust Establishment: When you run `initTM -f`, the Breeze server attempts to contact the System Manager to download the Identity Certificate and the Trust Anchor (Root CA).

Authentication: For this security exchange to be authorized, System Manager requires an Enrollment Password. This password is set globally in the System Manager web console (under Services > Security > Certificates > Enrollment Password).

Expiration: If the enrollment password has not been set, or if it has expired (they are typically time-bound for security), the `initTM` command will fail with an authentication error, preventing the Breeze node from joining the management domain.

NEW QUESTION # 78

In Avaya Aura Messaging 6.3, which statement is true about Avaya Aura Messaging (AAM) capacities of a system utilizing the Standard Capacity (non-High Capacity) Message Store template?

- A. One Message Store Server supports up to 600 user mailboxes and you can have 5 active + 1 Redundant Application Servers in a cluster.
- B. One Message Store Server supports up to 1000 user mailboxes and you can have 3 active + 1 Redundant Application Servers in a cluster.
- C. One Message Store Server supports up to 6000 user mailboxes and you can have 3 active + 1 Redundant Application Servers in a cluster.
- D. One Message Store Server supports up to 60000 user mailboxes and you can have 5 active + 1 Redundant Application Servers in a cluster.

Answer: C

Explanation:

Dedicated AxC/Directory server: A physical server that manages notification capabilities and the LDAP database and provides communications between application servers and the thirdparty storage server. This server also stores user properties and name and greeting recordings.

Not all configurations require a dedicated AxC/Directory server because the AxC/Directory role runs on the Avaya-provided message store.

You only need a dedicated AxC/Directory server for:

* Release 6.2 and earlier Messaging systems with a third-party storage server.

* Release 6.3 or later systems with more than one application server, or more than 6000 users using a third-party storage server, such as Microsoft Exchange.

third-party storage server, such as Microsoft Exchange.

NEW QUESTION # 79

In some deployments, the Avaya Session Border Controller for Enterprise (ASBCE) might not trust the Certificate Authority (CA)

which signed the WebLM server identity certificate.
Which tool would you use to fix the trust issue?

- A. the "Fix ASBCE WebLM Cert" option under Device Management > Licensing
- B. the sbceconfigurator.py change-ssl-certs command issued from the SBC CLI
- C. the "Verify Existing Certificate" option under Device Management > Licensing
- **D. the sbceconfigurator.py fix-weblm-cert command issued from the EMS CLI**

Answer: D

Explanation:

When the Avaya Session Border Controller for Enterprise (ASBCE) cannot verify the identity of the WebLM server (usually because the WebLM server is using a certificate signed by a CA that isn't in the SBC's trust store), it will fail to acquire licenses.

The Tool: The sbceconfigurator.py script is a specialized python utility located on the Element Management System (EMS).

The Function: The fix-weblm-cert argument specifically automates the process of fetching the WebLM server's certificate and adding the necessary root or intermediate CA certificates into the SBC's trusted repository.

Location: This must be run from the EMS CLI, as the EMS is responsible for pushing configuration and trust updates to the individual SBC devices it manages.

NEW QUESTION # 80

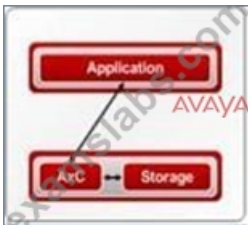

What are the three components of Avaya Aura Messaging (AAM)? (Choose three.)

- **A. Application Server**
- B. SM100 Module
- C. Messaging Distributor
- **D. AxC/Directory**
- **E. Messaging Store**

Answer: A,D,E

Explanation:

The AXC connector is always co-resident with the Avaya message store.

NEW QUESTION # 81
