Development-Lifecycle-and-Deployment-Architect Passing Score

With the help of our Development-Lifecycle-and-Deployment-Architect practice dumps, you will be able to feel the real exam scenario. It is better than Development-Lifecycle-and-Deployment-Architect dumps questions. If you want to pass the Salesforce Development-Lifecycle-and-Deployment-Architect exam in the first attempt, then don't forget to go through the Development-Lifecycle-and-Deployment-Architect practice testprovided by the Dumpleader. It will allow you to assess your skills and you will be able to get a clear idea of your preparation for the real Salesforce Development-Lifecycle-and-Deployment-Architect Exam. It is the best way to proceed when you are trying to find the best solution to pass the Development-Lifecycle-and-Deployment-Architect exam in the first attempt.

Salesforce Development-Lifecycle-and-Deployment-Architect certification exam consists of multiple-choice questions that test the candidate's knowledge and skills in various areas of Salesforce development lifecycle and deployment. Development-Lifecycle-and-Deployment-Architect exam covers topics such as design considerations, development methodologies, deployment strategies, testing, and release management. Development-Lifecycle-and-Deployment-Architect Exam is timed and candidates have to answer all questions within the given time frame.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q61-Q66):

NEW QUESTION # 61
Universal Container has multiple departments who use Salesforce and request changes: Sales, Service, Back Office, Marketing, etc. Each of these departments makes independent purchase decisions for AppExchange apps, field requests, and page layouts, resulting in low adoption and under -use of standard Salesforce capabilities. What mechanism should a Technical Architect recommend to increase use of standard Salesforce functionality?

- A. Change Control Board
- B. Requirements Traceability Matrix
- C. Project Management Office
- D. Center of Excellence

Answer: D

Explanation:
Explanation
A Center of Excellence is a mechanism that can help to increase the use of standard Salesforce functionality, by defining and managing best practices, standards, and governance across the organization. A Center of Excellence can also facilitate cross-functional collaboration, knowledge sharing, and alignment of Salesforce initiatives with business goals. A Change Control Board is a group of stakeholders that reviews and approves changes to the system, but does not necessarily promote the use of standard Salesforce functionality. A Requirements Traceability Matrix is a document that links requirements to their sources and test cases, but does not necessarily increase the use of standard Salesforce functionality. A Project Management Office is a group that oversees the execution of projects, but does not necessarily increase the use of standard Salesforce functionality.

NEW QUESTION # 62
What advice should a technical architect provide in a Change Advisory Board meeting?

- A. Functionality meets the business needs.
- B. Solution is technically sound.
- C. Solution is usable by the business.
- D. Troubleshooting strategies for deployment issues

Answer: D

Explanation:
Explanation
The advice that a technical architect should provide in a Change Advisory Board meeting is troubleshooting strategies for deployment issues. This is because the Change Advisory Board is responsible for reviewing and approving changes to the IT environment, and the technical architect should provide guidance on how to resolve any potential problems that may arise during the deployment process1. The other options are not relevant for the Change Advisory Board meeting, as they are more related to the requirements analysis, design, or testing phases of the development lifecycle.

NEW QUESTION # 63

Universal Containers has asked the salesforce architect to establish a governance framework to manage all of those Salesforce initiatives within the company. What is the first step the Architect should take?

- A. Implement a project management tool to manage all change requests on the project
- B. Identify relevant Stakeholders from within Universal Containers to obtain governance goals and objectives
- C. Implement a comprehensive DevOps framework for all initiatives within Universal Containers
- D. Establish a global Center of Excellence to define and manage Salesforce development standards across the organization

Answer: B

Explanation:
Explanation
The first step in establishing a governance framework is to identify the relevant stakeholders from within the organization to obtain their goals and objectives. This will help to define the scope, roles, responsibilities, and processes for managing the Salesforce initiatives. The other options are possible steps to take later, but not the first one.

NEW QUESTION # 64

Universal Containers (UC) is implementing a governance framework and has asked the Architect to make recommendations regarding release planning. Which two decisions should the Architect make when planning for releases? Choose 2 answers

- A. When to test a new UC feature release if there are issues.
- B. How to roll back to the previous Salesforce release if there are issues.
- C. How to test existing functionality to ensure no regressions are introduced.
- D. Whether Salesforce will wait to upgrade the pod until after a UC release is complete.

Answer: A,C

Explanation:
Explanation
How to test existing functionality to ensure no regressions are introduced is a decision that the Architect should make when planning for releases, as it is part of the quality assurance process and helps to ensure that the new changes do not break the existing functionality. When to test a new UC feature release is also a decision that the Architect should make when planning for releases, as it is part of the release schedule and helps to coordinate the testing activities with the development and deployment activities. Whether Salesforce will wait to upgrade the pod until after a UC release is complete is not a decision that the Architect can make, as it is determined by Salesforce and depends on the release window and the pod assignment. How to roll back to the previous Salesforce release if there are issues is not a decision that the Architect can make, as it is not possible to roll back to a previous Salesforce release once the upgrade is done.

NEW QUESTION # 65

Which two groups are responsible for the creation and execution of Release Management processes? Choose 2 answers

- A. Dev/Build Team
- B. Steering Committee
- C. Center of Excellence
- D. End Users

Answer: A,C

Explanation:
Explanation
The creation and execution of Release Management processes are the responsibility of the Dev/Build Team and the Center of Excellence. The Dev/Build Team is in charge of developing, testing, and deploying the changes to the system, while the Center of Excellence is in charge of defining and managing the best practices, standards, and governance for the system. The Steering Committee is a group of senior stakeholders that provides strategic direction and oversight for the project, but does not create or execute the Release Management processes. The End Users are the people who use the system, but do not create or execute the Release Management processes.
