

Fully Updated HP HPE7-A03 Dumps - Ensure Your Success With HPE7-A03 Exam Questions

2026 Latest ExamDumpsVCE HPE7-A03 PDF Dumps and HPE7-A03 Exam Engine Free Share: <https://drive.google.com/open?id=1a6SNzBDq04QvEarDaz4EJZU-Dqhnv-4i>

Our Aruba Certified Campus Access Architect Exam (HPE7-A03) exam dumps give help to give you an idea about the actual Aruba Certified Campus Access Architect Exam (HPE7-A03) exam. You can attempt multiple Aruba Certified Campus Access Architect Exam (HPE7-A03) exam questions on the software to improve your performance. You have the option to change the topic and set the time according to the actual HP HPE7-A03 Exam.

HP HPE7-A03 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Analyze Requirements: It focuses on determining possible high-level solutions. The topic also discusses mapping the needs into technical solutions and evaluating the proposed solution against project objectives and dependencies. Moreover, it also focuses on documenting assumptions.
Topic 2	<ul style="list-style-type: none"> Propose the Solution: The focal point of this topic is creating the design documentation and the final design. Moreover, the topic also focuses on presenting the solution.
Topic 3	<ul style="list-style-type: none"> Discover Requirements: This topic defines the goals and identifies the current environment and the objectives. Lastly, it also focuses on collecting information.
Topic 4	<ul style="list-style-type: none"> Architect the Solution: It measures your knowledge about identifying the solution options, designing high-level topologies, selecting the correct products, and determining the suitable overlay and underlay design. Additionally, the topic discusses how to verify that the design meets the original requirements.

Quiz 2026 HPE7-A03: Aruba Certified Campus Access Architect Exam – High-quality Latest Test Cost

ExamDumpsVCE has the ability to help IT people for success. ExamDumpsVCE HP HPE7-A03 exam dumps are the training materials that help you succeed. As long as you want to Pass HPE7-A03 Test, you must choose ExamDumpsVCE. We guarantee your success in the first attempt. If you fail, we will give you a FULL REFUND of your purchasing fee.

HP Aruba Certified Campus Access Architect Exam Sample Questions (Q79-Q84):

NEW QUESTION # 79

Which is true when it comes to Aruba Central licensing for gateways? (Select two.)

- A. Aruba WLAN Gateway licenses allow normal SD-Branch features within a campus.
- B. Aruba Gateway normal licensing is subdivided into three categories: Foundation, Advanced, and Foundation Base.
- C. Aruba SD-Branch Gateway licenses allow normal WLAN Gateway features within a campus.
- D. SD-WAN Gateway functionality requires security licensing.

Answer: B,C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

- * Aruba Central Licensing for Gateways Aruba has moved to a tiered subscription licensing model for gateways managed by Aruba Central. Licensing is divided into:
 - * Foundation Base - provides basic gateway management and monitoring.
 - * Foundation - enables standard gateway functionality such as WLAN gateway roles, routing, and tunneling.
 - * Advanced - adds enhanced capabilities such as SD-WAN features, security services, and advanced routing.
- * Why Option A is Correct Aruba Central licensing for gateways is indeed subdivided into three categories: Foundation Base, Foundation, and Advanced. This aligns directly with Aruba's documented Central licensing structure.
- * Why Option B is Incorrect SD-WAN functionality is not tied to "security licensing." Instead, SD-WAN features are unlocked with the Advanced license tier. Security services may also be enabled at that tier, but they are not a separate license requirement.
- * Why Option C is Correct Aruba SD-Branch Gateways (with appropriate Central licensing) can also provide WLAN Gateway features in a campus deployment. This is explicitly supported in Aruba's ESP and Central design guides, where branch gateways can terminate WLAN tunnels and provide role-based policy enforcement in addition to SD-WAN.
- * Why Option D is Incorrect The reverse is not true - Aruba WLAN Gateway licenses do not allow SD-Branch features. A WLAN gateway license is designed for campus WLAN tunnel termination and policy enforcement, but does not include SD-WAN branch functions.
- * Aruba Official Design Guide Reference:
 - * Aruba Central Licensing Overview: Gateway licensing is split into Foundation Base, Foundation, and Advanced.
 - * Aruba ESP Campus Design Guide: SD-Branch gateways can run both SD-WAN and WLAN Gateway roles when properly licensed.
 - * Aruba Central Feature Matrix: SD-WAN functionality requires the Advanced license tier, not a separate "security license."

NEW QUESTION # 80

A global cruise line company needs to refresh its current fleet. They will refresh the 'insides' of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware. They start with the smallest ship with a maximum of 800 guests.

Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDF's of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (980 ft) and the type used is OS1. Each cabin is connected by a single OM2 pair to the IDF, the maximum length is 60 meters (200 ft).

Each technical room is connected by a single OM2 pair to the IDF, with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and

the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN infrastructure is based on the 200/300 series indoor and outdoor APs running InstantOS (less than 300 APs), the customer has no change in WLAN requirements.

The cruise line company will replace its current internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new Internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because internet connection is guaranteed.

The week after the presentation of your design to the CIO of the cruise line company, the CIO calls you to discuss increasing the security on the wired network infrastructure. Since one of their competitors had one of their cruise ships cyber hacked, the CSO of the cruise line has mandated increased security on the wired network. They have heard about dynamic segmentation and central and decentral overlay networks. For their POS systems, they need a low-latency network connection between the POS system and the POS server in the data center on the ship. Also, the CSO wants to enhance the WLAN security as well by tunneling all user traffic. What solution fits the customer's requirements?

- A. Standardize on 6300 switches for the edge, 8320 for the RR, 8360 for the stub/border, and utilize Aruba Central NetConductor
- B. Standardize on 6300 switches for the edge, 8320 for the RR, 8320 for the stub/border. 9240 for the WLAN Gateway, and utilize Aruba Central NetConductor
- C. Standardize on 6300 switches for the edge, 8325 for the RR, 8360 for the stub/border. 9240 for the WLAN Gateway, and utilize Aruba Central NetConductor.
- **D. Standardize on 6300 switches for the edge, 8320 for the RR, 8360 for the stub/border. 9240 for the WLAN Gateway, and utilize Aruba Central NetConductor.**
- E. Standardize on 6200 switches for the edge, 8325 for the RR, 8360 for the stub/border, and utilize Aruba Central NetConductor

Answer: D

Explanation:

Considering the global cruise line company's requirement to enhance wired network security while ensuring low-latency connections for POS systems and tunneling all user traffic for WLAN security, the most fitting solution involves a combination of Aruba switches and gateway along with a network management and orchestration tool. Specifically, standardizing on Aruba 6300 switches for the edge layer caters to the need for high-performance, fan-less switches with 10GbE uplinks, matching the requirement for upgraded cabin and technical room connections.

The Aruba 8320 as a Route Reflector (RR) and Aruba 8360 for the stub/border provide a robust core and distribution layer with high throughput and redundancy. The inclusion of a 9240 WLAN Gateway addresses the need for secure WLAN user traffic tunneling. Utilizing Aruba Central NetConductor enhances network management efficiency, security policy enforcement, and dynamic segmentation across the wired and wireless infrastructure, aligning with the ESP architecture from Aruba and meeting the company's security enhancement objectives.

NEW QUESTION # 81

Which platform can be used to demo your solution to a customer? (Select three.)

- **A. Aruba Demo Experience Platform**
- B. Aruba Solution Exchange
- C. Aruba Support Portal
- **D. Aruba Innovation Zone**
- E. your own lab
- **F. Aruba CX Switch Simulator**

Answer: A,D,F

Explanation:

To demonstrate a solution to a customer, three platforms that can be effectively used are the Aruba CX Switch Simulator (Option B), Aruba Innovation Zone (Option C), and Aruba Demo Experience Platform (Option F). The Aruba CX Switch Simulator provides a virtual environment where customers can interact with the Aruba OS-CX interface, allowing them to explore features and configurations without the need for physical hardware. The Aruba Innovation Zone offers a space for experiencing the latest Aruba technologies and solutions in action, showcasing their capabilities in real-world scenarios. The Aruba Demo Experience Platform is designed to give customers a comprehensive look at Aruba's solutions, enabling interactive demos and simulations that highlight the benefits and functionalities of the products. These platforms provide valuable resources for customers to understand and evaluate

Aruba solutions in a controlled and informative environment.

NEW QUESTION # 82

A customer wants to have the ability to show network usage. Which product would allow them to have this visibility?

- A. ClearPass
- B. UXI
- C. Central
- D. Aruba OS 8.X

Answer: C

Explanation:

Aruba Central provides a cloud-based management platform for managing and monitoring Aruba Instant APs, switches, and branch gateways. It offers a comprehensive dashboard that gives insights into network usage, health, and performance metrics. Central allows network administrators to have visibility over their entire network infrastructure from a single pane of glass, including detailed usage statistics, which can be broken down by device, application, and time.

This visibility into network usage is crucial for optimizing network performance, planning capacity, and understanding user behavior. Aruba Central's analytics and reporting capabilities enable customers to track and analyze network usage, making it the appropriate product choice for customers wanting to monitor their network usage closely.

NEW QUESTION # 83

XYZ Regional Hospital is an integrated healthcare system of hospitals, neighborhood health centers, and small doctor offices. XYZ Regional Hospital has recently merged with 4x neighborhood health centers and 125 doctor branch offices. The wireless, wired access, and AAA solutions are outdated and need to be replaced.

XYZ Regional Hospital is looking to future-proof and improve efficiency across all sites by enhancing wired and wireless access and migrating to a centralized and unified wired/wireless and policy management that can provide uninterrupted availability of all systems.

Locations:

- XYZ Regional Hospital is located in New York City
- Dila Health Center is located in City A
- Mount Health Center is located in City B
- Rock Health Center is located in City C
- Branch clinics are located at different locations across the United States Requirements:
- Provide, via management software, one single pane of glass to manage wired and wireless LANs, and VPNs across campus, branch, and remote via web/cloud architecture providing near real-time insight, troubleshooting tools, and Service Level performance reporting.
- Seamless integration across wired, wireless, WAN, SD-Branch, IoT
- Provide secure wireless access to all the employees of the Regional Hospital and partners, as well as provide wireless Internet access to medical citizens when they visit our facilities.
- All-access points must support the following features and specifications: 802.11.ax (Wi-Fi 6E Certified)
- Security options including WPA2/WPA3, 802.1X with Radius secure authentication
- Identify and authenticate every wireless and wired device
- End-to-end role-based security
- Seamless mobility across the hospital for medical teams, patients, and visitors
- Cuts Wi-Fi deployment times from days to hours and enables Zero-Touch deployments across the site
- Establishes a resilient, future-ready network infrastructure with the intelligence, scalability, and intuitive toolsets to meet emerging needs
- Fully redundant branch solution with dynamic path selection to the hospital A Regional Hospital will be implementing RADIUS authentication across all their switches. They are looking for a solution wherein they can use HPE Aruba Networking ClearPass Policy Manager to allow staff members from five different teams (AV team, security team, desktop/printer team, voice team, network & security team) to register these types of devices and control access to them to a specific team. This registration, visibility, and access control to devices must be self-service. In addition, device registration needs to be removable on a scheduled basis.

What is the most appropriate solution for the hospital's requirements?

- A. HPE Aruba Networking ClearPass Device Profiler
- B. HPE Aruba Networking ClearPass Endpoint Repository
- C. HPE Aruba Networking ClearPass Device Registration
