2V0-16.25 Test Answers & Trusted 2V0-16.25 Exam Resource

The VMware vSphere Foundation 9.0 Administrator (2V0-16.25) certification is the way to go in the modern VMware era. Success in the VMware 2V0-16.25 exam of this certification plays an essential role in an individual's future growth. Nowadays, almost every tech aspirant is taking the test to get VMware 2V0-16.25 Certification and find well-paying jobs or promotions. But the main issue that most of the candidates face is not finding updated VMware 2V0-16.25 practice questions to prepare successfully for the VMware 2V0-16.25 certification exam in a short time.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q51-Q56):

NEW QUESTION # 51

An administrator has licensed vSphere components in Connected mode and then switched to Disconnected mode to meet the company security restrictions, which cannot be violated.

What must the administrator do to ensure the VMware vSphere Foundation license remains valid?

- A. Switch to Connected mode, validate that VCF Operations has downloaded a new license file from VCF Business Services console, and then switch to Disconnected mode at least once every 365 days.
- B. Manually exchange a registration and license file between the VCF Operations instance and the VCF Business Services console at least once every 180 days.

- C. Provide an internet connection to VCF Operations, then download a new license file from the VCF Business Services console at least once every 180 days.
- D. Nothing. The license is perpetual.

Answer: B

Explanation:

For Disconnected mode licensing in vSphere Foundation:

- * Administrators must manually export a registration file, upload it to the VCF Business Services console, and then import the license file back into VCF Operations.
- * This process must be repeated every 180 days to maintain license validity.

Other options:

- * A. Switch to Connected mode once every 365 days# Incorrect; 180-day requirement.
- * C. License is perpetual# Not correct; subscription-based license requires refresh.
- * D. Provide internet connection every 180 days# Violates security restriction (Disconnected mode is required).

NEW QUESTION # 52

An administrator is tasked to implement a new iSCSI storage for a new cluster.

The following information was provided to the administrator:

- * iSCSI storage controller IPs are all in the same subnet.
- * Multipathing should be used.
- * Storage supports Asymmetric Logical Unit Access (ALUA).
- * Should be configured for high performance.

Which are the four required steps to configure this on an ESX host? (Choose four.)

- A. Add iSCSI software adapter.
- B. Configure two bound VMkernel ports.
- C. Set Path Selection Policy (PSP) to Most Recently Used (MRU).
- D. Configure two unbound VMkernel ports.
- E. Add NVMe over TCP software adapter.
- F. Configure 1 vSwitch with 2 Uplinks.
- G. Configure 2 vSwitch with 1 Uplink.
- H. Set Path Selection Policy (PSP) to Round Robin (RR).

Answer: A,B,F,H

Explanation:

For iSCSI multipathing with ALUA and high performance in ESXi:

- * 1 vSwitch with 2 Uplinks# Standard design for redundancy and multipathing. (B)
 - * Add iSCSI software adapter# Required to connect to storage. (E)
 - * Configure two bound VMkernel ports# Ensures multipathing (one per uplink). (G)
 - * Set PSP to Round Robin (RR)# Optimizes I/O balancing across multiple paths. (F)
- Other options:
- * A. 2 vSwitches with 1 Uplink each# Not recommended, complicates multipathing.
 - * C. NVMe over TCP# Not relevant, storage is iSCSI.
 - * D. MRU policy# Legacy, not high performance.
 - * H. Unbound VMkernel ports# Used for software iSCSI port binding, but "bound" VMkernel ports are required for multipathing.

NEW QUESTION # 53

Which component must be added after an initial deployment of VMware vSphere Foundation (VVF) to provide a central location for logs collection?

- A. VCF Operations for Networks
- B. Fleet Manager

- C. VCF Operations
- **D. VCF Operations for Logs**

Answer: D

Explanation:

After deploying vSphere Foundation, to centralize log collection and analysis, you must add:

* VCF Operations for Logs, which provides log ingestion, alerting, and centralized troubleshooting.

Other options:

* B. VCF Operations# Focuses on performance/capacity, not log collection.

* C. VCF Operations for Networks# Focuses on networking insights.

* D. Fleet Manager# Used for multi-instance management, not logging.

NEW QUESTION # 54

An administrator is tasked with creating dashboards to track system performance metrics for both the IT department and executive leadership. The requirements for this task are:

* The IT team needs detailed, technical metrics across all of the infrastructure components in the environment.

* The executives need high-level summaries that highlight Key Performance Indicators (KPIs) across the environment in a single dashboard.

* The executives need to access the dashboard via a shared URL.

* The dashboards must be capable of being shared, and always display the latest data collected when the link is used.

What two steps should the administrator perform to meet these requirements? (Choose two.)

- A. Use Out-of-the-Box dashboards in VCF Automation to highlight Key Performance Indicators.
- B. Create a Custom dashboard in VCF Operations for Logs to display the Key Performance Indicators.
- **C. Create a Custom dashboard in VCF Operations to highlight Key Performance Indicators.**
- **D. Use Out-of-the-Box dashboards in VCF Operations to display detailed technical metrics.**

Answer: C,D

Explanation:

To satisfy both IT and executive requirements:

* IT team# Needs detailed technical metrics, which are available through Out-of-the-Box dashboards in VCF Operations. (A)

* Executives# Need a custom KPI-focused dashboard, with summaries and high-level visibility. This can be shared via a URL link that always shows the latest data. (B) Why others are incorrect:

* C. Custom dashboard in VCF Operations for Logs# Logs are not KPI-focused performance metrics.

* D. Out-of-the-Box dashboards in VCF Automation# VCF Automation is not designed for KPI reporting.

NEW QUESTION # 55

An administrator is informed that a digital certificate used by vSphere has been revoked by the issuing Certificate Authority (CA) before the scheduled expiration date. The administrator checks the Certificate Revocation List (CRL) in VMware Cloud Foundation (VCF) Operations but the CRL tab is not activated.

What must the administrator do to view the CRL?

- **A. Select the Activate Standard Certificate Validation under Global Settings.**
- B. The CRL tab is not available when VCF Operations is licensed under vSphere Foundation.
- C. Set the Threshold For Adapters Certificate Expiration Alert to 6 under Global Settings.
- D. Select the External Event Based Active Symptoms under Global Settings.

Answer: A

Explanation:

In VCF Operations, the Certificate Revocation List (CRL) tab is visible only when Standard Certificate Validation is activated in Global

Settings.

* Once enabled, administrators can view the CRL tab and monitor revoked certificates.

Other options:

* A. External Event Based Active Symptoms# Related to alerting, not CRL.

* C. Threshold for Expiration Alert# Configures warnings, not CRL visibility.

* D. Not available under vSphere Foundation license# Incorrect; CRL is available if validation is enabled.
