International Code Council Fire-Inspector-II Actual Exam Dumps Exam | Best Way to Pass International Code Council Fire-Inspector-II

The Fire-Inspector-II test material is reasonable arrangement each time the user study time, as far as possible let users avoid using our latest Fire-Inspector-II exam torrent for a long period of time, it can better let the user attention relatively concentrated time efficient learning. The Fire-Inspector-II practice materials in every time users need to master the knowledge, as long as the user can complete the learning task in this period, the Fire-Inspector-II test material will automatically quit learning system, to alert users to take a break, get ready for the next period of study.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q58-Q63):

NEW QUESTION # 58

A permit is required for storage of high-pile combustible stock in a building when the area of stock exceeds

- A. 0
- B. 1
- C. 2,500
- D. 1,000

Answer: A

Explanation:

High-Pile Combustible Storage Permit Requirements

According to the International Fire Code (IFC) 2021, Section 105.6.23, a permit is required for the storage of high-pile combustible stock when the storage area exceeds 2,500 square feet.

2. Definition of High-Pile Storage

High-pile storage is defined as storage of combustible materials on racks or piles exceeding 12 feet in height (or 6 feet for highly combustible materials, such as rubber and plastics).

IFC Table 3206.2 establishes fire protection requirements based on storage height, area, and commodity class.

3. Verification of Other Options

Option A (225 sq. ft.) - Incorrect, as this is far below the 2,500 sq. ft. permit threshold.

Option B (500 sq. ft.) - Incorrect, as the fire code does not require a permit at this level.

Option C (1,000 sq. ft.) - Incorrect, as the IFC specifies 2,500 sq. ft. as the threshold for requiring a permit.

Reference Sources:

International Fire Code (IFC) 2021 - Section 105.6.23 (High-Pile Combustible Storage Permit Requirements) IFC Chapter 32 (High-Piled Storage Regulations) ICC Fire Inspector II Study Guide (2021) Thus, the correct and verified answer is: D. 2,500. #

NEW QUESTION # 59

A building occupied for aerosol storage shall be classified as which of the following occupancy classifications?

- A. High-hazard Group H
- B. High-hazard Group H-2
- C. High-hazard Group H-3
- D. Group S-1

Answer: A

Explanation:

IFC Section 3804.1 classifies aerosol storage as Group H (high-hazard) if flammable, fitting option A.

Options B and C are subgroups (H-2, H-3), while D (Group S-1) is for moderate-hazard storage, not applicable. This is consistent with the study guide's occupancy classifications.

References: Fire Inspector II Study Guide, IFC Section 3804.1.

NEW QUESTION # 60

Hazardous occupancies involved in the manufacturing of organic coatings:

- A. require only a manual fire alarm system
- B. require only an automatic fire alarm system
- C. do not require a fire alarm system
- D. require both manual and automatic fire alarm systems.

Answer: D

Explanation:

Hazardous occupancies involved in organic coatings manufacturing are classified as Group H-2 or H-3 occupancies under the 2021 IFC. These facilities involve highly flammable materials, requiring both manual and automatic fire alarm systems for safety.

IFC 2021, Section 415.7 - Organic Coatings Manufacturing:

Requires that automatic fire alarm and manual fire alarm systems be installed due to the high risk of fire and explosion in these facilities.

IFC 907.2.4 - Fire Alarm Systems for Group H Occupancies:

Specifies that Group H (high-hazard) occupancies must have both manual and automatic fire alarm systems. The automatic fire alarm system ensures immediate detection, while the manual system allows for human activation in case of emergencies.

Why Other Options Are Incorrect?

A). Do not require a fire alarm system.

Incorrect, as all high-hazard occupancies require fire alarm systems.

B). Require only a manual fire alarm system.

Incorrect, as automatic detection is also required due to high fire risk.

C). Require only an automatic fire alarm system.

Incorrect, as manual activation is necessary for early intervention.

Correct answer: D. Require both manual and automatic fire alarm systems.

NEW QUESTION # 61

Pressure tests for organic coating process piping shall be conducted for a minimum of:

- A. 1 hour
- B. 2 hours
- C. 30 minutes
- D. 45 minutes

Answer: A

Explanation:

Pressure tests for organic coating process piping are required to ensure system integrity and prevent leaks, which could lead to fire or explosion hazards. The minimum required duration for these pressure tests is 1 hour.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 1504.6.3 (Pressure Testing for Organic Coating Process Piping) IFC 1504.6.3 mandates that all process piping associated with organic coating operations must undergo a pressure test for at least 1 hour. This ensures that the pipes can handle operational pressures without failure.

2. NFPA 33 - Standard for Spray Application Using Flammable or Combustible Materials (2021 Edition) NFPA 33, Section 14.2.6 confirms that process piping must be pressure-tested for no less than 1 hour to verify its safety and reliability.

Detailed Explanation of Answer Choices:

Option A (Incorrect): 30 minutes is insufficient for proper pressure testing.

Option B (Incorrect): 45 minutes is still below the 1-hour minimum requirement.

Option C (Correct): 1 hour is the correct minimum test duration as required by IFC 1504.6.3 and NFPA 33.

Option D (Incorrect): 2 hours is longer than required, but the minimum requirement is 1 hour.

Thus, the correct and verified answer is: C. 1 hour.

NEW QUESTION # 62

Where requirements for fire safety are not specifically provided for by the International Fire Code, which of the following shall have the responsibility to determine the applicable requirements?

- A. Board of appeals.
- B. City manager.
- C. Legal counsel.
- D. Fire code official.

Answer: D

Explanation:

According to the International Fire Code (IFC) 2021, when specific fire safety requirements are not explicitly provided for in the code, the responsibility to determine the applicable requirements falls upon the Fire Code Official.

Reference from the IFC (2021):

IFC Section 104.1 - General Authority and Responsibilities:

This section explicitly grants the Fire Code Official the authority to interpret the code and determine the necessary safety measures in cases where the code does not provide specific guidance.

It states: "The fire code official is hereby authorized to enforce the provisions of this code and shall have the authority to render interpretations of the code and to adopt policies and procedures in order to clarify the application of its provisions." IFC Section

104.9 - Alternative Materials and Methods:

This section further supports the authority of the Fire Code Official by allowing them to approve alternative fire safety measures when strict compliance with the code is not feasible.

Why Other Options Are Incorrect?

A: City Manager:

The city manager is responsible for administrative and operational management but does not have the authority to interpret or enforce fire code requirements.

B: Legal Counsel:

Legal counsel provides legal advice but does not have jurisdiction over fire safety code enforcement.

C: Board of Appeals:

The board of appeals reviews disputes and interpretations made by the Fire Code Official, but they do not have primary responsibility for determining applicable fire safety requirements.

Final Conclusion:

The Fire Code Official is the designated authority responsible for interpreting and applying fire safety requirements in situations where the International Fire Code (IFC) does not explicitly provide specific provisions.

NEW QUESTION # 63

.....

Based on high-quality products, our Fire-Inspector-II guide torrent has high quality to guarantee your test pass rate, which can achieve 98% to 100%. Fire-Inspector-II study tool is updated online by our experienced experts, and then sent to the user. So you don't need to pay extra attention on the updating of study materials. The data of our Fire-Inspector-II exam torrent is forward-looking and can grasp hot topics to help users master the latest knowledge. If you fail the exam with Fire-Inspector-II Guide Torrent, we promise to give you a full refund in the shortest possible time. Of course, if you are not reconciled and want to re-challenge yourself again, we will give you certain discount.
