### Fortinet FCSS\_SASE\_AD-24 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• SASE Deployment: This domain assesses the capabilities of Cloud Security Architects in deploying SASE solutions. It includes implementing various user onboarding methods, configuring administration settings, and applying security posture checks and compliance rules to ensure a secure environment.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• SASE Architecture and Components: This section measures the skills of Network Security Engineers and covers the architecture and components of FortiSASE. It includes integrating FortiSASE into a hybrid network, identifying its components, and constructing deployment cases to effectively implement SASE solutions.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>Analytics: This domain evaluates the skills of Data Analysts in utilizing analytics within FortiSASE. It involves identifying potential security threats using traffic logs, configuring dashboards and logging settings, and analyzing reports for user traffic and security issues to enhance overall security posture.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>SIA, SSA, and SPA" This section focuses on the skills of Security Administrators in designing security profiles for content inspection and deploying SD-WAN and Zero Trust Network Access (ZTNA) using SASE. Understanding these concepts is crucial for securing access to applications and data across the network.</li> </ul>

## Fortinet FCSS - FortiSASE 24 Administrator Sample Questions (Q49-Q54):

### NEW QUESTION # 49

FortiSASE delivers a converged networking and security solution. Which two features help with integrating FortiSASE into an existing network?

(Choose two.)

Response:

- A. remote browser isolation (RBI)
- B. SD-WAN
- C. zero trust network access (ZTNA)
- D. security, orchestration, automation, and response (SOAR)

**Answer: B,C**

### NEW QUESTION # 50

Refer to the exhibits.

☐

A FortiSASE administrator has configured an antivirus profile in the security profile group and applied it to the internet access policy. Remote users are still able to download the eicar.com-zip file from <https://eicar.org>. Traffic logs show traffic is allowed by the policy. Which configuration on FortiSASE is allowing users to perform the download?

- A. Web filter is allowing the traffic.
- B. IPS is disabled in the security profile group.
- C. The HTTPS protocol is not enabled in the antivirus profile.
- D. Force certificate inspection is enabled in the policy.

**Answer: D**

### NEW QUESTION # 51

During FortiSASE provisioning, how many security points of presence (POPs) need to be configured by the FortiSASE administrator?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: C**

### NEW QUESTION # 52

In which three ways does FortiSASE help organizations ensure secure access for remote workers? (Choose three.)

- A. It uses the identity & access management (IAM) portal to validate the identities of remote workers.
- B. It secures traffic from endpoints to cloud applications.
- C. It enforces granular access policies based on user identities.
- D. It enforces multi-factor authentication (MFA) to validate remote users.
- E. It offers zero trust network access (ZTNA) capabilities.

**Answer: B,C,E**

Explanation:

FortiSASE provides several features to ensure secure access for remote workers. The following three ways are particularly relevant: It secures traffic from endpoints to cloud applications (Option B):FortiSASE secures all traffic between remote endpoints and cloud applications by inspecting it in real time. This includes applying security policies, threat detection, and data protection measures to ensure that traffic is safe and compliant.

It offers zero trust network access (ZTNA) capabilities (Option D):ZTNA ensures that remote workers are granted access to resources based on strict verification of their identity and device posture. By treating all users and devices as untrusted by default, ZTNA minimizes the risk of unauthorized access and lateral movement within the network.

It enforces granular access policies based on user identities (Option E):FortiSASE allows administrators to define and enforce fine-grained access policies based on user identities, roles, and other attributes. This ensures that remote workers only have access to the resources they need, reducing the attack surface.

Here's why the other options are incorrect:

A . It enforces multi-factor authentication (MFA) to validate remote users:While MFA is a critical security measure, it is typically implemented through identity providers (e.g., FortiAuthenticator or third-party solutions) rather than directly through FortiSASE.

C . It uses the identity & access management (IAM) portal to validate the identities of remote workers:FortiSASE integrates with IAM systems but does not use the IAM portal itself to validate identities. Identity validation is handled through authentication mechanisms like SAML, LDAP, or OAuth.

### NEW QUESTION # 53

What are two advantages of using zero-trust tags? (Choose two.)

- A. Zero-trust tags can be used to create multiple endpoint profiles which can be applied to different endpoints
- B. Zero-trust tags can determine the security posture of an endpoint.
- C. Zero-trust tags can be used to allow secure web gateway (SWG) access
- D. Zero-trust tags can be used to allow or deny access to network resources

**Answer: B,D**

Explanation:

Zero-trust tags are critical in implementing zero-trust network access (ZTNA) policies. Here are the two key advantages of using zero-trust tags:

\* Access Control (Allow or Deny):

\* Zero-trust tags can be used to define policies that either allow or deny access to specific network resources based on the tag associated with the user or device.

\* This granular control ensures that only authorized users or devices with the appropriate tags can access sensitive resources, thereby enhancing security.

\* Determining Security Posture:

\* Zero-trust tags can be utilized to assess and determine the security posture of an endpoint.

\* Based on the assigned tags, FortiSASE can evaluate the device's compliance with security policies, such as antivirus status, patch levels, and configuration settings.

\* Devices that do not meet the required security posture can be restricted from accessing the network or given limited access.
