220-1101證照考試 - 220-1101熱門考古題

Fast2test是一家專業的網站, 它給每位元考生提供優質的服務, 包括售前服務和售後服務兩種, 如果你需要我們Fast2test CompTIA的220-1101考試培訓資料, 你可以先使用我們的免費試用的部分考題及答案, 看看適不適合你, 這樣你可以親自檢查了我們Fast2test CompTIA的220-1101考試培訓資料的品質, 再決定購買使用。假如你很不幸的沒通過, 我們將退還你購買的全部費用, 並提供一年的免費更新, 直到你通過為止。

最新的 A+ 220-1101 免費考試真題 (Q93-Q98):

問題 #93

A technician builds a custom computer for a customer, installing a high-end video card that draws 550W at maximum load. After a day of using the computer, the customer notices video loss and a burning smell. Which of the following should the technician troubleshoot first?

- A. Video card seating in the PCIe slot
- **B. ATX 3.0 16-pin connector**
- C. Chassis fan-speed settings
- D. RAM overclock configuration in the BIOS

答案: B

解題說明:

The ATX 3.0 16-pin connector provides power to high-end graphics cards, and a poor connection could lead to power issues and burning smells.

問題 #94

A customer has a Wi-Fi-capable laptop to use when traveling for work. Which of the following will allow the laptop to stay connected when the user travels?

- A. Wi-Fi extender
- B. Bluetooth
- C. Cellular card
- D. GPS

答案： C

解題說明：

A cellular card is a device that allows a laptop to connect to the internet using a cellular network, such as 4G or 5G. A cellular card can provide internet access when the user travels and does not have access to a Wi-Fi network. A cellular card may require a subscription plan from a cellular service provider. A Wi-Fi extender is a device that boosts the signal of an existing Wi-Fi network, but it does not provide internet access by itself.

Bluetooth is a wireless technology that allows devices to communicate over short distances, but it does not provide internet access either. GPS is a satellite-based system that provides location and navigation information, but it does not provide internet access as well. References:

問題 #95

A company recently enabled two-factor authentication in order to enhance security. Users should be prompted for two-factor authentication when working outside of the office, but are also being prompted when connecting to the office Wi-Fi. Which of the following should the technician do?

- A. Implement allow listing and add the office IP address as an exception.
- B. Remove two-factor authentication from the users' accounts.
- C. Substitute hard tokens in place of soft tokens.
- D. Leave the current rules in place and disable Wi-Fi on all devices.

答案： A

解題說明：

Allow listing is a security technique that allows only specific IP addresses or domains to access a network or a service. By adding the office IP address as an exception, the company can prevent two-factor authentication from being triggered when users are connected to the office Wi-Fi, since the office network is considered trusted. This way, users will only be prompted for two-factor authentication when working outside of the office, which enhances security.

Change your two-step verification method and settings - Microsoft Support: This article shows how to manage your security verification methods and settings for your work or school account, including how to turn on two-factor verification prompts on a trusted device.

2FA Directory: This website lists all the sites that support two-factor authentication, and the methods they use.

問題 #96

Which of the following would MOST likely be used to connect one or more devices to the internet in a SOHO?

- A. Router
- B. Wireless access point
- C. Hub
- D. Ethernet gateway

答案： A

解題說明：

A router is a device that connects one or more networks, such as a home or small office network, to the internet. It allows multiple devices to share a single internet connection and provides network address translation (NAT) to enable communication between the devices on the local network and the internet. A hub, Ethernet gateway, or wireless access point does not provide this functionality. A router is the most likely device to be used to connect one or more devices to the internet in a SOHO. A router can provide network address translation (NAT), firewall protection, and other features that are important for securing and managing a network.

問題 #97

A technician is selecting RAM for a new high-end workstation. The motherboard has eight slots that support DDR5 memory. Which of the following should the technician do to optimize performance?

- A. Utilize all channels.
- B. Use the minimum number of modules.
- C. Increase memory timings.
- D. Increase the virtual RAM.

答案： A

解題說明：

Explanation

The best option that the technician should do to optimize performance is D. Utilize all channels. This option means that the technician should install the RAM modules in a way that maximizes the number of memory channels that are used by the motherboard. Memory channels are pathways that connect the memory controller to the RAM modules, and they allow data to be transferred between them. The more memory channels that are used, the higher the memory bandwidth and performance1.

DDR5 memory supports up to eight memory channels per module, which is twice as many as DDR42.

However, not all motherboards can support eight channels per module, and some may only support four or two channels per module. Therefore, the technician should check the motherboard specifications and manual to determine how many memory channels it supports and how to install the RAM modules accordingly.

For example, if the motherboard supports four channels per module, then the technician should install four RAM modules in slots 1, 3, 5, and 7 to use all 16 available channels. If the motherboard supports two channels per module, then the technician should install eight RAM modules in all slots to use all 16 available channels. If the technician installs fewer modules than the number of slots, then some channels will be left unused and the performance will be lower1.

問題 #98

.....

我們Fast2test CompTIA的220-1101考試培訓資料是最佳的培訓資料，如果你是IT人員，它將是你必選的培訓資料，不要拿你的未來來賭明天，Fast2test CompTIA的220-1101考試培訓資料絕對值得信賴，我們是專門給全世界的IT認證的考生提供培訓資料的，包括試題及答案，實現 CompTIA的220-1101考試認證，是許多IT和網路專業人士的目標，Fast2test的合格率是難以置信的高，在Fast2test，我們致力於你不斷的取得成功。
