Our AWS-Solutions-Architect-Associate learning prep boosts the self-learning, self-evaluation, statistics report, timing and test stimulation functions and each function plays their own roles to help the clients learn comprehensively. The self-learning and self-evaluation functions of our AWS-Solutions-Architect-Associate guide materials help the clients check the results of their learning of the AWS-Solutions-Architect-Associate Study Materials. The timing function of our AWS-Solutions-Architect-Associate training quiz helps the learners to adjust their speed to answer the questions and keep alert and our study materials have set the timer.

The AWS Certified Solutions Architect - Associate (SAA-C02) exam is a certification test offered by Amazon Web Services (AWS) for professionals who want to prove their skills in designing and deploying cloud architectures using AWS technology. AWS-Solutions-Architect-Associate Exam is designed to validate the knowledge and skills of individuals in building and deploying secure, scalable, and highly available systems on AWS. AWS-Solutions-Architect-Associate exam is intended for individuals who have experience working with AWS services and solutions.

Certification Path of AWS Solutions Architect Associate Exam

- Prerequisites: None
- AWS advises a minimum of one (1) year experience developing cost-effective, fault-tolerant, as well as scalable distributed systems on AWS.

Recommended:

- Knowledge of recommended best practises for safe and trustworthy AWS platform applications
- Experience of the use of AWS resources in computing, networking, storage and database AWS implementation and operations systems hands-on insight
- The ability to define which AWS programmes satisfy a particular technological needs
- Understand the security characteristics and resources provided by AWS and its ties with conventional providers
- AWS global infrastructure awareness. An understanding of AWS-related network technology

Study AWS-Solutions-Architect-Associate Dumps | AWS-Solutions-Architect-Associate Authorized Test Dumps

AWS-Solutions-Architect-Associate real dumps revised and updated according to the syllabus changes and all the latest developments in theory and practice, our AWS Certified Solutions Architect - Associate (SAA-C03) real dumps are highly relevant to what you actually need to get through the certifications tests. Moreover they impart you information in the format of AWS-

Solutions-Architect-Associate Questions and answers that is actually the format of your real certification test. Hence not only you get the required knowledge but also find the opportunity to practice real exam scenario.

The AWS-Solutions-Associate exam covers a range of topics, including AWS architecture, security, networking, databases, and storage. In order to pass the exam, candidates must demonstrate a strong understanding of these topics and how they relate to the AWS platform. AWS-Solutions-Architect-Associate Exam consists of multiple-choice questions and is timed at 130 minutes.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q625-Q630):

NEW QUESTION # 625

A solutions architect is designing a solution that requires frequent updates to a website that is hosted on Amazon S3 with versioning enabled. For compliance reasons, the older versions of the objects will not be accessed frequently and will need to be deleted after 2 years.

What should the solutions architect recommend to meet these requirements at the LOWEST cost?

- A. Use S3 batch operations to replace object tags. Expire the objects based on the modified tags.
- B. Replicate older object versions to a new bucket. Use an S3 Lifecycle policy to expire the objects in the new bucket after 2 years.
- **C. Configure an S3 Lifecycle policy to transition older versions of objects to S3 Glacier. Expire the objects after 2 years.**
- D. Enable S3 Event Notifications on the bucket that sends older objects to the Amazon Simple Queue Service (Amazon SQS) queue for further processing.

Answer: C

NEW QUESTION # 626

Your organization is looking for a solution that can help the business with streaming data. Several services will require access to read and process the same stream concurrently. What AWS service meets the business requirements?

- **A. Amazon Kinesis Streams**
- B. Amazon Kinesis Firehose
- C. Amazon CloudFront
- D. Amazon SQS

Answer: A

NEW QUESTION # 627

A company recently migrated to AWS and wants to implement a solution to protect the traffic that flows in and out of the production VPC. The company had an inspection server in its on-premises data center. The inspection server performed specific operations such as traffic flow inspection and traffic filtering. The company wants to have the same functionalities in the AWS Cloud.

Which solution will meet these requirements?

- A. Use Amazon GuardDuty for traffic inspection and traffic filtering in the production VPC
- B. Use Traffic Mirroring to mirror traffic from the production VPC for traffic inspection and filtering.
- **C. Use AWS Network Firewall to create the required rules for traffic inspection and traffic filtering for the production VPC.**
- D. Use AWS Firewall Manager to create the required rules for traffic inspection and traffic filtering for the production VPC.

Answer: C

Explanation:

AWS Network Firewall supports both inspection and filtering as required

NEW QUESTION # 628

A development team is creating an event-based application that uses AWS Lambda functions. Events will be generated when files are added to an Amazon S3 bucket. The development team currently has Amazon Simple Notification Service (Amazon SNS) configured as the event target from Amazon S3.

What should a solutions architect do to process the events from Amazon S3 in a scalable way?

- A. Create an SNS subscription that processes the event in Amazon Elastic Kubernetes Service (Amazon EKS) before the event runs in Lambda.
- B. Create an SNS subscription that sends the event to AWS Server Migration Service (AWS SMS). Configure the Lambda function to poll from the SMS event.
- C. Create an SNS subscription that processes the event in Amazon Elastic Container Service (Amazon ECS) before the event runs in Lambda.
- **D. Create an SNS subscription that sends the event to Amazon Simple Queue Service (Amazon SQS). Configure the SQS queue to trigger a Lambda function.**

Answer: D

Explanation:

"Configuring a queue to trigger an AWS Lambda function (console) You can use an AWS Lambda function to process messages in an Amazon SQS queue. Lambda polls the queue and invokes your Lambda function synchronously with an event that contains queue messages. You can specify another queue to act as a dead-letter queue for messages that your Lambda function can't process. A Lambda function can process items from multiple queues (using one Lambda event source for each queue). You can use the same queue with multiple Lambda functions."

NEW QUESTION # 629

A company wants to migrate its on-premises Oracle database to Amazon Aurora. The company wants to use a secure and encrypted network to transfer the data. Which combination of steps will meet these requirements? (Select TWO.)

- A. Use AWS Direct Connect SiteLink to transfer data from the on-premises environment to AWS.
- **B. Use AWS Schema Conversion Tool (AWS SCT) and AWS Database Migration Service (AWS DMS) to migrate the data.**
- **C. Use AWS Site-to-Site VPN to establish a connection to transfer the data from the on-premises environment to AWS.**
- D. Use AWS Application Migration Service to migrate the data.
- E. Use AWS App2Container to migrate the data.

Answer: B,C

Explanation:

Comprehensive and Detailed Explanation:

To securely migrate an on-premises Oracle database to Amazon Aurora, the following steps are recommended:

* Use AWS Schema Conversion Tool (AWS SCT) and AWS Database Migration Service (AWS DMS): AWS SCT helps convert the source database schema to a format compatible with the target database (Aurora). AWS DMS facilitates the actual data migration, ensuring minimal downtime and data integrity.

* Use AWS Site-to-Site VPN: Establishing a Site-to-Site VPN connection provides a secure and encrypted tunnel between the on-premises environment and AWS. This ensures that data transferred during the migration is protected against interception and unauthorized access.
