## Oracle Cloud Infrastructure 2025 Observability Professional Sample Questions (Q33-Q38):

### NEW QUESTION # 33

Why do dedicated Vantage Points matter? Select two reasons that apply. (Choose two.)

- A. Applications on-premise or on secured network cannot be tested from a public Vantage Point
- B. Applications on-premise or secured network can be tested from a public Vantage Point
- C. Test internal customer applications
- D. Test Deployment Manager and Scheduler

**Answer: A,C**

Explanation:

In OCI APM's Synthetic Monitoring, Vantage Points are locations from which synthetic tests (e.g., HTTP requests) are run.

Dedicated Vantage Points are private, user-managed instances, distinct from public ones hosted by Oracle:

Applications on-premise or on secured network cannot be tested from a public Vantage Point (B): Public Vantage Points, located in

Oracle-managed regions, lack access to private networks (e.g., on-premise servers or firewalled applications). Dedicated Vantage Points, deployed within a user's network, overcome this limitation.

Test internal customer applications (C): Dedicated Vantage Points enable testing of internal applications (e.g., intranet sites) not exposed to the public internet, ensuring performance monitoring from within the secured environment.

Why not A or D?

Test from public Vantage Point (A): Contradicts B; public Vantage Points can't access private networks.

Test Deployment Manager and Scheduler (D): These are unrelated OCI components, not Synthetic Monitoring targets.

Dedicated Vantage Points extend monitoring to restricted environments.

#### NEW QUESTION # 34

Which Management Agent group allows the agent to upload data to the discovery service?

- A. StackMonitoringViewerGrp
- B. StackMonitoringAdminGrp
- C. Mgmt\_agent\_dynamic\_group
- **D. AgentUsersGrp**

**Answer: D**

Explanation:

Management Agents require group membership and policies to interact with OCI services:

AgentUsersGrp (A): A predefined dynamic group for all Management Agents in a tenancy. With an attached policy granting upload permissions (e.g., allow dynamic-group AgentUsersGrp to use discovery-service-family in tenancy), agents can send data to the discovery service for resource detection.

Why not B, C, or D?

B and C: Specific to Stack Monitoring roles, not general agent uploads.

D: A generic name, not a predefined OCI group.

AgentUsersGrp is the standard for this purpose.

#### NEW QUESTION # 35

Which answer best defines an Application Performance Monitoring (APM) Domain in Oracle Cloud Infrastructure (OCI)?

- A. A set of resources supporting high-availability connectivity to APM
- **B. A resource type containing the systems monitored by APM**
- C. A collection of users, roles, and identity data managing access to APM
- D. A compartment containing the data collected by APM

**Answer: B**

Explanation:

An APM Domain in OCI defines the monitoring scope for APM:

A resource type containing the systems monitored by APM (B): An APM Domain is a logical container for monitored systems (e.g., microservices, web servers, databases). It groups these resources for trace and metric collection, often separated by environment (e.g., dev, prod).

Why not A, C, or D?

Users, roles, identity (A): Relates to IAM, not APM Domains.

High-availability connectivity (C): Infrastructure concern, not an APM Domain's purpose.

Compartment (D): Compartments organize resources; APM Domains are specific to monitored systems within them.

APM Domains structure monitoring efforts effectively.

#### NEW QUESTION # 36

Which two features are provided by Application Performance Monitoring? (Choose two.)

- **A. Distributed Tracing**
- **B. Real User Monitoring**
- C. Java Management
- D. Capacity Planning

**Answer: A,B**

Explanation:

OCI Application Performance Monitoring (APM) provides tools to monitor application performance:

Distributed Tracing (A): Tracks requests across microservices, showing latency and dependencies via traces and spans.

Real User Monitoring (C): Captures real user interactions with web applications (e.g., page load times) using a Browser Agent.

Why not B or D?

Capacity Planning (B): Available in Operations Insights, not APM.

Java Management (D): Not a feature of APM; Java Agent is a tool, not a feature.

These features align with APM's focus on performance and user experience.

### NEW QUESTION # 37

When would you use a vantage point in Application Performance Monitoring (APM)?

- **A. Synthetic Monitoring**
- B. Java Management
- C. Distributed Tracing
- D. Application Insights

**Answer: A**

Explanation:

In APM, a vantage point is used in:

Synthetic Monitoring (D): Runs tests from specific locations (vantage points) to monitor web application or API availability and performance globally.

Why not A, B, or C?

Java Management (A): Unrelated to vantage points.

Distributed Tracing (B): Tracks internal request flows, not external tests.

Application Insights (C): Not a formal APM feature; vague term.

Vantage points simulate user access from different regions.
