If you are worried about your Analytics-DA-201 real exam and you are not prepared so, now you don't need to take any stress about it. Get most updated Salesforce dumps torrent with 100% accurate answers. Our website is considered one of the best website where you can save extra money by getting one-year of free updates after buying the Analytics-DA-201 Dumps PDF files.

Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • ABAP RESTful Application Programming Model: This section of the exam evaluates the capabilities of the SAP S • 4HANA Technical Consultant in using the ABAP RESTful Application Programming Model (RAP). It focuses on understanding the structure and components of RAP, including behavior definitions, service bindings, and metadata extension. The goal is to validate the ability to develop modern and scalable applications using RAP.

Topic 2	<ul style="list-style-type: none"> • SAP Clean Core Extensibility and ABAP Cloud: This part of the exam targets the SAP S • 4HANA Technical Consultant and covers concepts of clean core extensibility using ABAP in the cloud. The focus is on in-app and side-by-side extensibility techniques, ensuring that custom code complies with cloud-readiness principles and does not compromise the upgrade stability of core systems.
Topic 3	<ul style="list-style-type: none"> • Object-Oriented Design: This section of the exam evaluates the SAP ABAP Cloud Developer's understanding of object-oriented principles in the ABAP context. It focuses on class-based programming, inheritance, interfaces, and polymorphism, all crucial for building modular and maintainable ABAP cloud applications.
Topic 4	<ul style="list-style-type: none"> • Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S • 4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.

Analytics-DA-201 Latest Braindumps Sheet & Exam Analytics-DA-201 Material

Salesforce Analytics-DA-201 authentication certificate is the dream IT certificate of many people. Salesforce certification Analytics-DA-201 exam is a examination to test the examinees' IT professional knowledge and experience, which need to master abundant IT knowledge and experience to pass. In order to grasp so much knowledge, generally, it need to spend a lot of time and energy to review many books. ExamCost is a website which can help you save time and energy to rapidly and efficiently master the Salesforce Certification Analytics-DA-201 Exam related knowledge. If you are interested in ExamCost, you can first free download part of ExamCost's Salesforce certification Analytics-DA-201 exam exercises and answers on the Internet as a try.

Salesforce Certified Tableau Data Analyst Sample Questions (Q162-Q167):

NEW QUESTION # 162

You have a dataset that contains sales data. The following is a sample of the data.

You need to return a value of true if a month has sales greater than \$50,000. otherwise the formula must return a value of false.

Which two formulas achieve the goal Choose two

- A. SUM([Sales]) IN (50000)
- B. MAX< [Sales], 50000)
- C. [Sales] > 50000
- D. IIF(SUM([Sales]) > 50000, TRUE, FALSE)

Answer: C,D

Explanation:

The two formulas that will return a value of true if a month has sales greater than \$50,000, otherwise the formula must return a value of false, are:

B). IIF(SUM([Sales]) > 50000, TRUE, FALSE) D. [Sales] > 50000

The IIF function is a logical function that returns one value if a condition is true, and another value if the condition is false. In this case, the condition is SUM([Sales]) > 50000, which means that the sum of sales for a month is greater than \$50,000. The function will return TRUE if the condition is true, and FALSE if the condition is false.

The comparison operator > is a logical operator that returns TRUE if the left operand is greater than the right operand, and FALSE otherwise. In this case, the operands are [Sales] and 50000, which means that the sales for a month are greater than \$50,000. The operator will return TRUE if the sales are greater than \$50,000, and FALSE otherwise.

The other options are not correct for this scenario. The IN function is a logical function that returns TRUE if a value is in a set of values, and FALSE otherwise. In this case, the value is SUM([Sales]), which is not in the set of values (50000). The function will always return FALSE. The MAX function is an aggregation function that returns the maximum value in a field or expression. In this case, the field or expression is [Sales], 50000, which is not valid syntax. The function will return an error. References:

NEW QUESTION # 163

You are creating an annual report in Microsoft Word.
In Tableau Desktop, you build a chart in a worksheet.
You want to create an image of the chart that you can add to the annual report.
What are two ways to create the image? Choose two.

- A. From the File menu, use the Export As Version option.
- B. From the Dashboard menu, use the Copy Image option.
- C. From the Worksheet menu, use the Copy option.
- D. From the Worksheet menu, use the Export option.
- E. From the Dashboard menu, use the Export Image option.

Answer: C,D

Explanation:

To create an image of the chart that you can add to the annual report, you can use either the Export option or the Copy option from the Worksheet menu. The Export option will allow you to save the image as a file in a specified location, name, and format. The Copy option will allow you to copy the image to the clipboard and paste it into another application, such as Microsoft Word. Both options will let you choose which elements to include in the image, such as title, caption, legend, etc. References:

- * Export Views from Tableau Desktop to Another Application
- * Copy and Paste Views from Tableau Desktop to Another Application

NEW QUESTION # 164

You have the following calculated fields in a worksheet.
[Calc1] = DATEADD ('year', -1, TODAY ())
[Calc2] = DATETRUNC ('month', DATEADD ('year', -1, TODAY ()))
You want to calculate the month to date value of the prior year.
How should you complete the formula? (Drag the appropriate Options to the Answer Area and drop into the correct locations.)

Answer:

Explanation:

Explanation:

To calculate the month to date value of the prior year, you need to filter the order date to be between the first day of the same month of the previous year and the same day of the previous year. You can use the calculated fields [Calc1] and [Calc2] to get these dates.

[Calc1] returns the date that is one year before today, and

[Calc2] returns the date that is the first day of the month of [Calc1]. By using these fields in the filter condition, you can get the desired result.

NEW QUESTION # 165

You want to create the following dashboard that will contain two sheets.
What should you do?

- A. Drag both sheets to the dashboard and add a background to each sheet.
- B. Add a border to both sheets and add both sheets to a horizontal object.
- C. Add both sheets to a horizontal container and add a border to the container.
- D. Drag both sheets to the dashboard and add a border to each sheet.

Answer: C

NEW QUESTION # 166

You receive a tab-delimited data file name sales.tsv.

You need to connect to the file.

Which option should you select in Tableau Desktop?

Answer:

Explanation:

To connect to a tab-delimited data file named sales.tsv, you should select the option To a File > Text file in Tableau Desktop. This option will allow you to browse and select the file from your local or network drive and connect to it as a data source. You can then specify the text file properties, such as the delimiter, the text qualifier, and whether the first row contains column names. You can also join, union, or blend the data with other data sources if needed. References:
