- A. Client, SMS and Secure Gateway
- B. Identity Awareness Blade on Security Gateway, User Database on Security Management Server and Active Directory
- C. User, Active Directory and Access Role
- D. Identity Source Identity Server (POP) and Identity Enforcement (PEP)

**Answer: D**

### NEW QUESTION # 76

Your users have some issues connecting with Mobile Access VPN to your gateway. How can you debug the tunnel establishment?

- A. run vpn debug truncon
- B. in the file SCVPNDIR/conf/httpd conf change the line LogLevel To LogLevel debug and run cvpnrestart
- C. in the file \$VPNDIR/conf/httpd conf change the line LogLevel To LogLevel debug and run vpn restart
- D. run fw ctl zdebug -m sslvpn all

**Answer: B**

### NEW QUESTION # 77

Which of the following would NOT be a flag when debugging a unified policy?

- A. clob
- B. rulebase
- C. tls
- D. connection

**Answer: C**

### NEW QUESTION # 78

What file contains the RAD proxy settings?

- A. rad\_services.C
- B. rad\_settings.C
- C. rad\_control.C
- D. rad\_scheme.C

**Answer: B**

### NEW QUESTION # 79

What is correct about the Resource Advisor (RAD) service on the Security Gateways?

- A. RAD has a kernel module that looks up the kernel cache notifies client about hits and misses and forwards a-sync requests to RAD user space module which is responsible for online categorization
- B. RAD functions completely in user space The Pattern Matter (PM) module of the CMI looks up for URLs in the cache and if not found, contact the RAD process in user space to do online categorization
- C. RAD is completely loaded as a kernel module that looks up URL in cache and if not found connects online for categorization There is no user space involvement in this process
- D. RAD is not a separate module, it is an integrated function of the 'fw' kernel module and does all operations in the kernel space

**Answer: A**

Explanation:

The Resource Advisor (RAD) service on the Security Gateways is responsible for online categorization of URLs and resources for Application Control and Threat Prevention blades. RAD has two components: a kernel module and a user space module. The kernel module looks up the kernel cache for URLs and resources, notifies the client about hits and misses, and forwards asynchronous requests to the user space module. The user space module handles the communication with the Check Point online web service and updates the kernel cache with the results. RAD can operate in three modes: hold, background, and custom, depending on the configuration of the blades and the policy. References:
