

New Nutanix NCP-EUC Test Registration, NCP-EUC Reliable Exam Question

What's more, part of that RealVCE NCP-EUC dumps now are free: <https://drive.google.com/open?id=1PG0uLpK53nC-95awtlc9Ylou0UuBwnu>

In this society, only by continuous learning and progress can we get what we really want. It is crucial to keep yourself survive in the competitive tide. Many people want to get a NCP-EUC certification, but they worry about their ability. So please do not hesitate and join our study. Our NCP-EUC exam question will help you to get rid of your worries and help you achieve your wishes. So you will have more opportunities than others and get more confidence. Our NCP-EUC Quiz guide is based on the actual situation of the customer. Customers can learn according to their actual situation and it is flexible. Next I will introduce the advantages of our NCP-EUC test prep so that you can enjoy our products.

The NCP-EUC Certification is widely recognized by employers and is highly valued in the industry. It is an excellent way for professionals to demonstrate their skills and knowledge and to advance their careers in the field of end-user computing. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification is also an excellent way for organizations to ensure that their employees have the skills and knowledge necessary to deliver and manage end-user computing solutions using Nutanix technology.

>> **New Nutanix NCP-EUC Test Registration** <<

NCP-EUC Reliable Exam Question | New NCP-EUC Cram Materials

You can instantly download Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam NCP-EUC PDF questions file, desktop practice test software, and web-based Nutanix NCP-EUC practice test software. You can test the features of all these three Nutanix NCP-EUC Practice Questions formats before buying because RealVCE offers a free demo download facility. You will also be given free Nutanix NCP-EUC exam questions updates.

The NCP-EUC Certification Exam is a vendor-neutral certification exam, meaning that it is not tied to any specific vendor or technology. This makes the certification a valuable asset for IT professionals who want to work with different VDI solutions. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification also proves that the candidate has a deep understanding of VDI concepts and can apply them to various VDI solutions.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q45-Q50):

NEW QUESTION # 45

An administrator is setting up a storage container to provision Citrix MCS Non-persistent desktops. This storage container is dedicated to these desktops.

Which settings should the administrator select to optimize the storage?

- A. Compression Disabled, Deduplication Enabled, Erasure Coding Disabled
- B. Compression Enabled, Deduplication Enabled, Erasure Coding Disabled
- **C. Compression Enabled, Deduplication Disabled, Erasure Coding Disabled**
- D. Compression Enabled, Deduplication Enabled, Erasure Coding Disabled

Answer: C

Explanation:

According to the "Citrix Virtual Apps and Desktops on Nutanix" best practices guide, the recommended storage container configuration depends on the provisioning method. For Citrix MCS (Machine Creation Services) Non-persistent workloads, the following settings are explicitly recommended in the Nutanix storage table:

* Compression: Enabled (Inline compression is recommended for all workloads to improve capacity and performance).

* Deduplication: Disabled (For non-persistent MCS, the write-heavy differencing disks are deleted upon reboot, making post-process capacity deduplication ineffective. While performance deduplication can help with reads, Nutanix Shadow Clones automatically handle caching of the base image on AHV, rendering deduplication largely redundant and an unnecessary overhead for this specific use case).

* Erasure Coding: Disabled (Erasure coding is not suitable for the random write patterns and "hot" data associated with active VDI desktops; it is designed for cold, archive data).

Therefore, the correct configuration is Compression Enabled, Deduplication Disabled, and Erasure Coding Disabled.

Here are the 100% verified answers and detailed explanations based on the latest Nutanix End User Computing and Best Practices documentation.

NEW QUESTION # 46

When creating a Frame account, which two are valid Network Type options? (Choose two.)

- **A. Private Network with VPN**
- B. Express Route
- **C. Public Network**
- D. Private Network

Answer: A,C

Explanation:

<https://docs.frame.nutanix.com/platform/admin/account-creation/>

The Public Network option provides access to the Frame environment over the public internet, while the Private Network with VPN option allows for a secure connection to the Frame environment over a private network using a VPN.

NEW QUESTION # 47

The administrator has checked the logs to see the below output:

The API call sent to the VM via XD Plugin at [CDF logs]:

```

1397,0,2018/09/23 03:15:55:26697,17612,1924,1,BrokerHostingPlugin,,0,,1,Information,"[NutanixAHV]: Logger.TraceMsg: Acropolis_CommonO
rations:: checkVMPowerOnOffRequired():
VM Name: b61dba2a-9a0e-48e8-aa01-6d29525a0fb2
VMID: xxxxxx

State of the VM: on","
1398,0,2018/09/23 03:15:55:26711,17612,1924,1,BrokerHostingPlugin,,0,,5,EntryExit,"[NutanixAHV]: Logger.TraceEntryExit: NTNXVMProvisi
oning.AHVPrismVMInterfaces: Entered managedVM()", ""
1399,0,2018/09/23 03:15:55:26718,17612,1924,1,BrokerHostingPlugin,,0,,1,Information,"[NutanixAHV]: Logger.TraceMsg: NTNXVMProvisionin
g.AHVPrismVMInterfaces.manageVM(): Virtual Machine ID: b61dba2a-9a0e-48e8-aa01-6d29525a0fb2
Power Operation: ShutdownVM", ""
1400,0,2018/09/23 03:15:55:26729,17612,1924,1,BrokerHostingPlugin,,0,,1,Information,"[NutanixAHV]: Logger.TraceMsg: NTNXProvisioning.
PrismConnection.resultsFromPOSTRequest():

http Post Url = https://X.X.X.106:9440/api/nutanix/v0.8/vms/b61dba2a-9a0e-48e8-aa01-6d29525a0fb2/set_power_state/
http Post Body = { ""transition"": ""acpi_shutdown"" }, ""

```

Following that while the VM is being powered OFF, query for the current VM state results in ON (the administrator sees a number of these until the VM is marked as power OFF) logs]:

```

532,2,2018/09/23 03:15:56:93224,17612,1924,1,BrokerHostingPlugin,,0,,1,Information,"[NutanixAHV]: Logger.TraceMsg: Acropolis: In ge
ManagedMachine: VM-ID = b61dba2a-9a0e-48e8-aa01-6d29525a0fb2", ""

rations:: getManagedMachine():
VMID = b61dba2a-9a0e-48e8-aa01-6d29525a0fb2
VM Name = xxxxxx
Power State of the VM = on", ""

```

Upon further review the administrator notices in COF logs, after a number of queries for the machine state, one results in a conflicting state, reporting the Power state as ON and OFF [CDF logs] HCM should the administrator resolve the issue?

- A. Increase the distribution time in Machine Update Rollout
- B. Delete Scheduled reboot settings
- C. Decrease the distribution time in Machine Update Rollout
- **D. Create a Scheduled reboot cycle.**

Answer: D

NEW QUESTION # 48

A company is using Citrix for virtual desktops on Nutanix with AHV. The studio has 10,000 users who will be connecting to this infrastructure and have deployed a dedicated Files cluster for holding the user home shares.

Since this is a dedicated cluster with dual Intel 6242 28 GHz 16 Core processors and 192GB of RAM, what should be done for the FSVM and CVM configuration to allow for optimal performance?

- **A. Leave the CVM RAM at 32GB and increase the FSVM RAM to 96GB.**
- B. Increase the CVM RAM to 64GB and the FSVM RAM to 96GB.
- C. Increase the CVM vCPUs to 16 and the FSVM vCPUs to 12.
- D. Leave the CVM vCPUs at 12 and increase the FSVM vCPUs to 8,

Answer: A

Explanation:

<https://portal.nutanix.com/page/documents/solutions/details?targetId=TN-2041-Nutanix-Files:file-server-virtual-machines.html>

<https://next.nutanix.com/files-storage-71/command-line-access-to-nutanix-file-server-vm-fsvm-via-ssh-nutanix-files-33420> The file server VM (FSVM) is a virtual machine that runs on Nutanix Files and provides file services such as SMB shares and NFS exports. The FSVM is based on CentOS and incorporates all the security and hardening that goes into the Nutanix Controller VM (CVM)2. The CVM is a virtual machine that runs on each node of a Nutanix cluster and provides storage management, data protection, cluster coordination, and other services3.

The FSVMs have some default configuration settings that can be changed depending on your workload requirements. For example, you can change the number of vCPUs, RAM, network interfaces, or disk size of an FSVM2. However, you should not change

these settings without consulting Nutanix Support first.

One of the factors that affects the performance of an FSVM is its memory allocation. The more memory an FSVM has, the more cache it can use for file operations. This can improve the throughput and latency of file serving workloads⁴. Therefore, increasing the FSVM RAM to 96GB can help optimize its performance for a large number of users.

NEW QUESTION # 49

An administrator has been evaluating a performance issue with the current Citrix VDI solution on Nutanix. During the evaluation, the administrator finds out there is a feature that is enabled called Shadow Clones.

What would happen if an administrator disabled Shadow Clones within a company's VDI environment?

- A. Boot storms would be eliminated due to desktop resource contention.
- **B. Deployment times would increase as the number of deployed desktops increase,**
- C. Deployment times would decrease when deploying additional desktops.
- D. Boot storms would be eliminated because the number of desktops would be throttled.

Answer: B

Explanation:

Nutanix's Shadow Clones feature is used to create linked clones or snapshots of base VMs, which can improve VM provisioning time and storage efficiency by reducing the amount of duplicated data.

If an administrator disables Shadow Clones within a company's VDI environment, it is likely that deployment times would increase as the number of deployed desktops increases. This is because linked clones or snapshots would no longer be used, so each new desktop deployment would require creating a full copy of the base VM.

Nutanix Shadow Clones allow for distributed caching of a particular disk or VM data, which are in a 'multi-reader' scenario. This can help in scenarios such as VDI or private clone boot storms, where VMs on multiple nodes read from the same set of base disks¹²
