

EDGE-Expert Pass4sure & EDGE-Expert Instant Access

BONUS!!! Download part of CertkingdomPDF EDGE-Expert dumps for free: https://drive.google.com/open?id=115HBvd_7sj0SZBt0vHSN3qyAQqjlhctw

We are conscious of the fact that most of the candidates have a tight schedule which makes it tough to prepare for the Excellence in Design for Greater Efficiencies (EDGE Expert) Exam exam preparation. CertkingdomPDF provides you EDGE EDGE-Expert Exam Questions in 3 different formats to open up your study options and suit your preparation tempo.

The Excellence in Design for Greater Efficiencies (EDGE Expert) Exam (EDGE-Expert) practice questions (desktop and web-based) are customizable, meaning users can set the questions and time according to their needs to improve their discipline and feel the real-based exam scenario to pass the EDGE EDGE-Expert Certification. Customizable mock tests comprehensively and accurately represent the actual EDGE-Expert certification exam scenario.

>> EDGE-Expert Pass4sure <<

100% Pass Quiz 2026 Professional EDGE EDGE-Expert: Excellence in Design for Greater Efficiencies (EDGE Expert) Exam Pass4sure

Decades of painstaking efforts have put us in the leading position of EDGE-Expert training materials compiling market, and the excellent quality of our EDGE-Expert guide torrent and high class operation system in our company have won the common recognition from many international customers for us. With the high class operation system, we can assure you that you can start to prepare for the EDGE-Expert Exam with our study materials only 5 to 10 minutes after payment since our advanced operation system will send the EDGE-Expert exam torrent to your email address automatically as soon as possible after payment.

EDGE Excellence in Design for Greater Efficiencies (EDGE Expert) Exam Sample Questions (Q29-Q34):

NEW QUESTION # 29

A medium-rise building comprises retail on the first two floors with offices on succeeding floors (third to fifth). If one of the tenants on the third floor aims for EDGE certification, which building type should be used?

- A. Retail
- B. Core and Shell
- C. Mixed-use
- **D. Office**

Answer: D

Explanation:

The EDGE software requires users to select a building type (typology) to model resource consumption accurately, and the choice depends on the scope of the certification. In this scenario, a tenant on the third floor (an office floor) of a medium-rise building seeks EDGE certification. The EDGE User Guide provides guidance on selecting building types for tenant spaces: "When a tenant within a larger building seeks EDGE certification, the building type should reflect the tenant's space. For an office tenant on the third floor of a mixed-use building, the 'Office' typology should be selected, as the certification applies only to the tenant's space, not the entire building, unless the whole building is being certified" (EDGE User Guide, Section 2.2:

Project Setup). Option A, Office, aligns with this guidance, as the tenant's space is an office. Option B (Retail) is incorrect, as the retail floors are on the first two levels, not the third: "Retail typology would apply if the tenant space were on the retail floors, not the office floors" (EDGE User Guide, Section 2.2: Project Setup). Option C (Mixed-use) is also incorrect, as this typology applies to the entire building, not a single tenant space: "Mixed-use typology is used when the entire building, including all uses (e.g., retail and offices), is being certified, not for individual tenant spaces" (EDGE Methodology Report Version 2.0, Section

2.1: Calculation Approach). Option D (Core and Shell) is typically used for buildings certified up to the core and shell stage, not for tenant fit-outs: "Core and Shell typology applies to buildings certified without tenant fit-outs, focusing on the building envelope and systems, not individual tenant spaces like an office" (EDGE Certification Protocol, Section 1.2: Scope of EDGE Standard). The EDGE User Guide further clarifies: "For tenant-led certifications, the typology should match the tenant's use-e.g., 'Office' for an office tenant-even if the building has multiple uses, ensuring the Base Case reflects the tenant's specific consumption patterns" (EDGE User Guide, Section 2.2: Project Setup). Since the tenant on the third floor operates an office, the Office typology (Option A) is the correct choice for EDGE certification.

Reference:EDGE User Guide Version 2.1, Section 2.2: Project Setup; EDGE Methodology Report Version 2.0, Section 2.1: Calculation Approach; EDGE Certification Protocol, Section 1.2: Scope of EDGE Standard.

NEW QUESTION # 30

Client has provided the specification as per the image for low flow shower heads. What is the flow rate for shower heads that should have been entered to EDGE software?

- A. 1,315
- **B. 0**
- C. 1
- D. 3,590

Answer: B

Explanation:

According to the CBCI EDGE curriculum, when entering plumbing fixture data into the EDGE software, the value required is the actual flow rate of the fixture in liters per minute, not the product code, price, or any other specification number shown in supplier documentation.

From the specification image, the overhead shower is described as having a single flow rate of 6 liters per minute. Other numbers visible in the specification, such as 1,315 or 3,590, represent product codes or pricing information, not water flow rates. The 4 liters per minute value in the image applies to a wall mixer component and not to the shower head itself.

In EDGE, water savings for showers are calculated based on the flow rate combined with default usage assumptions. Therefore, the correct value to input for a low-flow shower head is its rated flow in liters per minute. Since the overhead shower shown has a flow rate of 6 liters per minute, that is the value that should be entered into the EDGE software.

Accurate entry of fixture flow rates is essential because it directly affects the calculated percentage reduction in water consumption compared to the baseline case.

NEW QUESTION # 31

Which of the following activities is NOT part of the EDGE Expert's scope of work for a building project?

- A. Provision of informal, basic training on using the EDGE App
- **B. EDGE audit services and issuance of preliminary or final EDGE certificates**
- C. Clients' EDGE certification applications facilitation
- D. Assistance in understanding green design principles, and the EDGE standard, software, and certification system

Answer: B

Explanation:

In the CBCI EDGE framework, an EDGE Expert supports the project team in achieving certification by guiding design decisions, modeling the project in the EDGE software, and helping prepare and organize documentation for submission. This commonly

includes facilitating the client's application process, explaining how the EDGE Standard works, and providing basic guidance on using the EDGE App or interpreting EDGE results. EDGE Experts also assist design teams in selecting appropriate energy, water, and materials strategies to meet the minimum savings thresholds and align the improved case inputs with the intended specifications. However, EDGE Experts are not permitted to act as third-party verifiers or issue certifications. Auditing and certification issuance are independent functions performed by an EDGE Auditor under an accredited Certification Body. This separation is essential to maintain impartiality and avoid conflicts of interest: the party who advises and models the project cannot be the same party who verifies compliance and awards certification. Therefore, providing EDGE audit services and issuing preliminary or final EDGE certificates is not within an EDGE Expert's scope of work, making option C the correct answer.

NEW QUESTION # 32

Which type of evidence is required at the post-construction stage for the efficiency measure window glazing?

- A. Window schedule for the building showing the major window glass types if more than one type of glass is present
- B. Bill of quantities with the specifications for the window glass highlighted
- C. **Manufacturer's data sheets showing the make and model, U-value, and SHGC of the installed glass**
- D. Design building elevations marking the window glass specifications

Answer: C

Explanation:

The post-construction stage in EDGE certification requires evidence to confirm that the efficiency measures claimed in the design stage have been implemented as specified. For window glazing, which affects energy efficiency through its U-value (thermal transmittance) and SHGC (Solar Heat Gain Coefficient), the EDGE Certification Protocol provides clear requirements: "At the post-construction stage, the Client must provide manufacturer's data sheets for the window glazing measure, showing the make and model, U-value, and SHGC of the installed glass, to confirm that the glazing matches the specifications claimed in the self-assessment and meets the energy efficiency requirements" (EDGE Certification Protocol, Section 3.4: Post-Construction Requirements). Option C, manufacturer's data sheets showing the make and model, U-value, and SHGC of the installed glass, directly matches this requirement, as it provides the specific technical data needed to verify compliance. Option A (design building elevations marking the window glass specifications) is relevant at the design stage, not post-construction: "Design elevations are required at the preliminary stage to show intended glazing specifications, not after construction" (EDGE Certification Protocol, Section 3.2:

Audit Requirements). Option B (bill of quantities with specifications highlighted) is insufficient on its own, as it may not provide detailed technical data: "Bills of quantities may support purchase verification, but manufacturer's data sheets are required for technical specifications like U-value and SHGC" (EDGE Certification Protocol, Section 3.4: Post-Construction Requirements). Option D (window schedule showing major glass types) is helpful but not sufficient, as it lacks the detailed technical data: "Window schedules may indicate glass types, but they do not replace the need for manufacturer's data sheets with U-value and SHGC at post-construction" (EDGE User Guide, Section 6.2: Documentation Requirements). The EDGE User Guide further clarifies: "For glazing measures, post-construction evidence must confirm the installed product's performance through manufacturer's data sheets, ensuring alignment with the design-stage claims" (EDGE User Guide, Section 4.1: Insulation Measures). Thus, manufacturer's data sheets (Option C) are required at the post-construction stage.

Reference:EDGE Certification Protocol, Section 3.4: Post-Construction Requirements, Section 3.2: Audit Requirements; EDGE User Guide Version 2.1, Section 6.2: Documentation Requirements, Section 4.1: Insulation Measures.

NEW QUESTION # 33

Which of the following user types has access to the Share Subproject function?

- A. Auditor
- B. **Owner**
- C. Reviewer
- D. Certifier

Answer: B

Explanation:

In the CBCI EDGE curriculum, the Share Subproject function is treated as a project administration permission, because it controls who can access a project or part of a project and what they are allowed to do inside the EDGE platform. Sharing affects project confidentiality, accountability for inputs, and control of documentation, so it is restricted to the user role that holds administrative authority over the project workspace.

The Owner role is the primary controlling role in an EDGE project. The Owner can manage access, invite or remove team members, and assign appropriate permissions for collaboration. This is consistent with how EDGE separates responsibilities: the client side controls project data entry, collaboration, and submissions, while verification roles remain independent.

Auditors and Certifiers are part of the independent third-party assessment pathway. Their access is typically granted for review and verification purposes, not for administering who the project is shared with. A Reviewer role, where used, is also generally a read-only or limited-access role and does not have authority to share or manage subprojects.

Therefore

NEW QUESTION # 34

.....

CertkingdomPDF insists on providing you with the best and high quality exam dumps, aiming to ensure you 100% pass in the actual test. Being qualified with EDGE certification will bring you benefits beyond your expectation. Our EDGE-Expert practice training material will help you to enhance your specialized knowledge and pass your actual test with ease. EDGE-Expert Questions are all checked and verified by our professional experts. Besides, the EDGE-Expert answers are all accurate which ensure the high hit rate.
