Free PDF 2026 High Pass-Rate Google Cloud-Digital-Leader: Google Cloud Digital Leader Valid Dumps Free

With Cloud-Digital-Leader exam dumps from Braindumpsqa, we provide guaranteed success rate for the Cloud-Digital-Leader. We provide latest and updated question answers for Cloud-Digital-Leader exam for preparation. You can prepare for the Cloud-Digital-Leader with our test products including Cloud-Digital-Leader PDF dumps questions, and test preparation software. You can prepare for the Cloud-Digital-Leader through practice kits without facing any problem. You can get the desired score for the Cloud-Digital-Leader and join the list of our satisfied customers. The Cloud-Digital-Leader test questions and preparation material is prepared by highly skilled certified professionals.

The Google Cloud-Digital-Leader exam covers a wide range of topics, including cloud computing concepts, GCP architecture and services, digital transformation strategies, and case studies. Cloud-Digital-Leader exam is divided into two parts: a multiple-choice knowledge assessment, and a practical assessment where candidates are required to design and implement a digital solution using

GCP technologies. Cloud-Digital-Leader exam is designed to test the candidate's ability to apply their knowledge in real-world scenarios.

Google Cloud Digital Leader Exam is a multiple-choice exam that consists of 50 questions. Cloud-Digital-Leader Exam is designed to be completed in 120 minutes, and candidates must score at least 70% to pass. Cloud-Digital-Leader exam covers a range of topics, including cloud computing basics, Google Cloud services, security and compliance, cost optimization, and digital transformation.

Google Cloud Digital Leader Sample Questions (Q163-Q168):

NEW QUESTION # 163

A customer has new applications to build that has to handle both batch data and streaming data. Which product should they choose?

- A. Dataprep
- B. Dataproc
- C. Data Fusion
- D. Dataflow

Answer: D

Explanation:

Dataflow is the managed version of Apache Beam. Beam = Batch + Stream. Unified stream and batch data processing that's serverless, fast, and cost-effective.

NEW QUESTION # 164

An organization wants to search hundreds of scanned documents for key information like dates, names, and other specific words. Why should the organization use application programming interfaces (APIs)?

- A. To replace the scanned documents with an online survey
- B. To transform the documents into unstructured data.
- C. To create digital versions of the documents and locate key information
- D. To ingest data in real time and encrypt unmatched words

Answer: B

Explanation:

Explanation

The text from the PDF/scanned documents/images gets converted into JSON (unstructured file) which will be further used for search.

NEW QUESTION # 165

Your organization recently migrated its compute workloads to Google Cloud. You want these workloads in Google Cloud to privately and securely access your large volume of on-premises data, and you also want to minimize latency.

What should your organization do?

- A. Peer your on-premises data center to Google's Edge Network
- B. Create a VPC between your on-premises data center and your Google resources
- C. Use Transfer Appliance to securely make your data available to Google Cloud
- D. Use Storage Transfer Service to securely make your data available to Google Cloud

Answer: B

NEW QUESTION # 166

What are the network requirements for Private Google Access?

- A. Both A and B
- B. Your network must have appropriate routes for the destination IP ranges used by Google APIs and services.
- C. None of the Above
- D. Private Google Access automatically enables any API.

Answer: B

Explanation:

Network requirements for Private Google Access:

- Because Private Google Access is enabled on a per-subnet basis, you must use a VPC network. Legacy networks are not supported because they don't support subnets.
- Private Google Access does not automatically enable any API. You must separately enable the Google APIs you need to use via the APIs & services page in the Google Cloud Console.
- If you use the private.googleapis.com or the restricted.googleapis.com domain names, you'll need to create DNS records to direct traffic to the IP addresses associated with those domains.
- Your network must have appropriate routes for the destination IP ranges used by Google APIs and services. These routes must use the default internet gateway next hop. If you use the private.googleapis.com or the restricted.googleapis.com domain names, you only need one route (per domain). Otherwise, you'll need to create multiple routes.
- Egress firewalls must permit traffic to the IP address ranges used by Google APIs and services. The implied allow egress firewall rule satisfies this requirement. For other ways to meet the firewall requirement.

NEW QUESTION # 167

An organization wants to use BigQuery data analytics to understand their website performance, but wants to move only some data into the cloud.

Which environment should the organization use?

- A. Private cloud
- B. On-premises
- C. Multi-cloud
- D. Hybrid cloud

Answer: D

Explanation:

The assumption should be made that there is still a private network involved. Hybrid clouds always include a private cloud and are typically managed as one entity. Multi-clouds always include more than one public cloud service, which often perform different functions.
