Linux Foundation Certified IT Associat Sample Questions (Q89-Q94):

NEW QUESTION # 89

Which of the following is a true statement about the Command and Query Responsibility Segregation (CQRS) pattern?

- A. CQRS separates front-end and back-end operations.
- **B. CQRS separates read and update operations for a data store.**
- C. CQRS separates network access from filesystem access.
- D. The main goal of CQRS is to reduce complexity.

Answer: B

Explanation:

CQRS is a design pattern that separates read (query) and write (command) operations for a data store. This allows optimization of read and write workloads independently, improves scalability, and can simplify handling of complex business logic without affecting the other operation type.

NEW QUESTION # 90

After installing the package 'postfix', what command would you run in order to ensure that Postfix is started on reboot?

- A. postfix -onboot yes
- **B. systemctl enable postfix**
- C. /etc/init.d/enable postfix
- D. enable postfix on

Answer: B

NEW QUESTION # 91

An IT associate needs to give a coworker escalated privileges on a server. Which of the following is the most appropriate method to accomplish this?

- A. Use vi to add the coworker to the /etc/powerusers file.
- B. Edit the /etc/sudo file and assign root privileges.
- **C. Use visudo to give the user sudo privileges.**
- D. Give the coworker the root password and change it after.

Answer: C

Explanation:

visudo is the recommended tool for managing sudo privileges because it safely edits the sudoers configuration and performs syntax validation before saving changes. This helps prevent configuration errors that could break administrative access while granting the user the required elevated privileges.

NEW QUESTION # 92

Which port is normally required to be open for secure remote interactive shell access to Linux systems?

- **A. 22/tcp**
- B. 25/tcp
- C. 443/tcp
- D. 23/tcp

Answer: A

NEW QUESTION # 93

Which of the following practices best supports effective creation and long-term maintenance of technical documentation?

- A. Write documentation in freeform prose with minimal structure or version control to encourage rapid publishing.
- **B. Use a standardized format, version control system, and collaborative platform to keep documentation consistent, accessible, and up to date.**
- C. Store documentation in individual user home directories to simplify editing and avoid unnecessary collaboration.
- D. Delay writing documentation until the project is complete to ensure that all details are finalized and no updates will be

Answer: B

Using a standardized format, version control, and a collaborative platform promotes consistency, traceability, and accessibility. It enables multiple contributors to maintain documentation effectively over time, track changes, and ensure that information remains accurate and up to date.
