CISCO NETWORKING ACADEMY PROGRAM

Lab 3.1.9e Crossover Cable Construction

Objective

- Build a Category 5 or Category 5e Unshielded Twisted Pair (UTP) Ethernet crossover cable to T568B and T568A standards.
- Test the cable for continuity and correct pin-outs, correct wire on the right pin.

Background

This will be a 4-pair "crossover" cable. A crossover cable means that the second and third pairs on one end of the cable will be reversed on the other end. The pin-outs will be T568A on one end and T568B on the other end. All 8 conductors (wires) should be terminated with RJ-45 modular connectors.

This crossover cable will conform to the structured cabling standards. If the crossover cable is used between hubs or switches, it is considered to be part of the "vertical" cabling. Vertical cabling is also called backbone cabling. A crossover cable can be used as a backbone cable to connect two or more hubs or switches in a LAN, or to connect two isolated workstations to create a mini-LAN. This will allow the connection of two workstations or a server and a workstation without the need for a hub between them. This can be very helpful for training and testing. To connect more than two workstations, a hub or a switch will be needed.

Prior to starting the lab, the teacher or lab assistant should have a spool of Category 5 or Category 5e UTP cable, RJ-45 (8-pin) connectors, a RJ-45 crimping tool and an Ethernet / RJ-45 continuity tester available. Work individually or in teams. The following resources will be required:

- One 0.6 to .9 m (2 to 3 ft) length of Category 5 cabling per person or team
- Four RJ-45 connectors, two are extra for spares
- RJ-45 crimping tools to attach the RJ-45 connectors to the cable ends
- Ethernet cabling continuity tester which can test crossover type cables, T568A to T568B
- Wire cutters

Step 1

Create a crossover cable using the following tables and diagrams. One end of the cable should be wired to the T568A standard. The other end should be wired to the T568B standard. This crosses the transmit pairs and the receive pairs, the second and third pair, to allow communication to take place. Only four wires are used with 10BASE-T or 100BASE-TX Ethernet.

1 - 4

Many people are keen on taking part in the NACE-CIP1-001 exam, The competition between candidates is fierce. If you want to win out, you must master the knowledge excellently. Our NACE-CIP1-001 training quiz is your best choice. With the assistance of our NACE-CIP1-001 study materials, you will advance quickly. Also, all NACE-CIP1-001 Guide materials are compiled and developed by our professional experts. So you can totally rely on our NACE-CIP1-001 exam simulating to aid you pass the exam. Furthermore, you will learn all knowledge systematically, which can help you memorize better.

NACE-CIP1-001 Coating Inspector Level 1 certification is a globally recognized qualification that assesses an individual's knowledge and practical skills in the field of coating inspection. Coating Inspector Level 1 certification is offered by the National Association of Corrosion Engineers (NACE), a professional organization dedicated to advancing the corrosion control industry. The NACE-CIP1-001 Certification is the first level of the NACE Coating Inspector program and is designed for individuals who have a basic understanding of coating inspection.

NACE-CIP1-001 Latest Version - NACE-CIP1-001 Testking

The Rea4Prep is committed to making the NACE NACE-CIP1-001 certification exam preparation simple, smart, and successful. To achieve this objective Rea4Prep is offering top-notch and real NACE-CIP1-001 exam questions in three different formats. The

names of these Coating Inspector Level 1 (NACE-CIP1-001) exam questions formats are PDF files, desktop practice test software, and web-based NACE-CIP1-001 practice test software.

NACE Coating Inspector Level 1 Sample Questions (Q10-Q15):

NEW QUESTION # 10

How many gauge readings does SSPC-PA 2 require within a 4 cm (1.5 inch) diameter circle?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

NEW QUESTION # 11

When holiday testing is required the Inspector is always required to enforce NACE SP 0188:

- **A. True**
- B. False

Answer: A

NEW QUESTION # 12

What is used to determine compressed air cleanliness?

- A. Blotter test
- B. Needle pressure gauge
- **C. Profilometer**
- D. Psychrometer

Answer: C

NEW QUESTION # 13

Prior to the pre-job conference you notice that the Inspection and Test Plan does not require a hold point after surface preparation and coating application. In speaking with the owners' representative in advance of the meeting you sense he/she does not understand the importance of the hold point.

As a NACE CIP Level 1 Inspector your preferred course of action is to:

- A. Gather data and attempt to meet with the owner's representative in advance of the pre-job conference
- B. Default to the owner's Inspection and Test Plan
- **C. Bring the matter up at the pre-job conference**
- D. Meet separately with the coating manufactures' representative and coating application company in advance of the pre-job conference

Answer: C

NEW QUESTION # 14

In a non-convertible coating the role of the primary solvent is to:

- **A. To control the evaporation rate**
- B. To promote faster cure
- C. To dissolve the resin
- D. To make the coating flow out better

Answer: A

NEW QUESTION # 15

.....

Our company has always been following the trend of the NACE-CIP1-001 Certification. The content of our NACE-CIP1-001 practice materials is chosen so carefully that all the questions for the exam are contained. And our NACE-CIP1-001 study materials have three formats which help you to read, test and study anytime, anywhere. This means with our products you can prepare for exams efficiently. If you desire a NACE certification, our products are your best choice.
