Adobe Commerce Developer Professional Sample Questions (Q88-Q93):

NEW QUESTION # 88
There is the task to create a custom product attribute that controls the display of a message below the product title on the cart page, in order to identify products that might be delivered late.
The new EAV attribute is_delayed has been created as a boolean and is working correctly in the admin panel and product page.
What would be the next implementation to allow the is_delayed EAV attribute to be used in the .phtml cart page such as $block->getProduct()->getIsDelayed()?
A)
Create a new file etc/catalog_attributes.xmi:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:module:Magento_Catalog:etc/catalog_attributes.xsd">
    <group name="quote_item">
        <attribute name="is_delayed" />
    </group>
</config>
```

B)
Create a new file etc/extension attributes.xmi:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:framework:Api/etc/extension_attributes.xsd"
    <extension_attributes for="Magento\Catalog\Api\Data\ProductRenderInterface>
        <attribute code="is_delayed" type="bool" />
    </extension_attributes>
</config>
```

C)

Create a new file etc/eav attributes.xmi:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:module:Magento_Eav:etc/eav_attributes.xsd">
    <entity type="quote_item">
        <attribute code="is_delayed">
            <field code="is_visible" locked="true" />
        </attribute>
    </entity>
</config>
```

- A. Option C
- B. Option B
- C. Option A

Answer: C

Explanation:
To allow theis_delayedEAV attribute to be used in the .phtml cart page, the developer needs to create a new file calledetc/catalog_attributes.xmi. This file will contain the definition of theis_delayedattribute.
The following code shows how to create theetc/catalog_attributes.xmifile:
XML
<?xml version="1.0"?>
<catalog_attributes>
<attribute code="is_delayed" type="int">
<label>Is Delayed</label>
<note>This attribute indicates whether the product is delayed.</note>
<sort_order>10</sort_order>
<required>false</required>
</attribute>
</catalog_attributes>
Once theetc/catalog_attributes.xmifile has been created, theis_delayedattribute will be available in the .phtml cart page. The attribute can be accessed using thegetIsDelayed()method of theProductclass.
PHP
$product = $block->getProduct();
$isDelayed = $product->getIsDelayed();
TheisDelayedvariable will contain the value of theis_delayedattribute. If the value of the attribute is 1, then the product is delayed. If the value of the attribute is 0, then the product is not delayed.

NEW QUESTION # 89
A developer needs to initialize the jQuery Ul widget for a specific HTML tag. Which HTML attribute is used for this?

- A. data-mage-init
- B. data-ui
- C. x-magento-init

Answer: A

Explanation:
The data-mage-init HTML attribute is used to initialize the jQuery UI widget for a specific HTML tag. This attribute specifies the name of the widget and its configuration options as a JSON object.
The x-magento-init HTML attribute is used to initialize RequireJS modules for a specific HTML tag. The data-ui HTML attribute does not exist in Adobe Commerce.
Verified References: [Adobe Commerce Developer Guide - Initialize JavaScript components using the data- mage-init attribute] To initialize the jQuery UI widget in Adobe Commerce, thedata-mage-initattribute is used in the HTML tag.
This attribute allows specifying the widget's component and its configuration in a JSON format. Thex- magento-initis used for initializing JavaScript components in a similar manner but is typically used within< script>tags. There's no standarddata-uiattribute used for this purpose in Magento 2.

NEW QUESTION # 90

What are two ways to access the PHP error logs on Adobe Commerce Cloud? (Choose Two.)

- A. Connect to the the servers via SSH and localize the log files.
- B. Navigate to the dedicated entry in the Project Web Interface.
- C. Use the dedicated command from Cloud CLI for Commerce.
- D. Use the Adobe Admin Log application.

Answer: A,C

Explanation:
Two ways to access the PHP error logs on Adobe Commerce Cloud are to use the dedicated command from Cloud CLI for Commerce and to connect to the servers via SSH and localize the log files. The Cloud CLI for Commerce is a command-line tool that allows developers to interact with their Adobe Commerce Cloud projects and environments. The developer can use the command magento-cloud log php to view or download the PHP error logs from any environment.
In Adobe Commerce Cloud, accessing PHP error logs can be done through the Cloud CLI or by directly connecting to the server via SSH.
* Cloud CLI for Accessing Logs:
* The Cloud CLI provides commands to access various logs, including PHP error logs, which can be accessed easily without directly connecting to the server.
* SSH for Direct Log Access:
* For more hands-on control or specific log inspection, SSH allows you to connect to the server and directly access log files located typically in the /var/log directory on Adobe Commerce Cloud environments.
* Why Options A and C are Correct:
* These two methods provide direct and official ways to access error logs on Adobe Commerce Cloud.
* Option B is incorrect as the Project Web Interface does not have a dedicated PHP error log entry.
Option D is incorrect as there is no Adobe Admin Log application.

NEW QUESTION # 91
A developer has informed the Adobe Support team about a planned traffic surge on an Adobe Commerce Cloud project that will take place in a little over 48 hours.
What is an advantage of this prior notice?

- A. The project will temporarily use an upgraded Fastly plan
- B. When the traffic arrives, extra server resources will be available.
- C. The Support team will monitor the website during that time

Answer: C

Explanation:
Informing the Adobe Support team about a planned traffic surge allows them to monitor the website during that time. With prior notice, the support team can ensure that they are prepared to quickly respond to any issues that arise due to the surge. While extra server resources or an upgraded Fastly plan may be possible outcomes, the primary advantage of advance notice is proactive monitoring and support during expected high traffic events.

NEW QUESTION # 92
What is one way a developer can upgrade the ECE-Tools package on an Adobe Commerce Cloud project?

- A. Project Web Interface
- B. Cloud CLI for Commerce tool
- C. Composer

Answer: C

Explanation:
According to the Adobe Commerce Developer Documentation, one way a developer can upgrade the ECE- Tools package on an Adobe Commerce Cloud project is by using Composer, which is a dependency management tool for PHP projects. The ECE-Tools package contains scripts and tools that help manage and deploy Adobe Commerce Cloud projects on the cloud infrastructure.
To upgrade the ECE-Tools package using Composer, the developer needs to run the following command in the project root directory:

composer update magento/ece-tools --with-dependencies

On an Adobe Commerce Cloud project, the recommended way to upgrade the ECE-Tools package is through Composer, a dependency manager for PHP. Composer is used to manage the dependencies of the project, including ECE-Tools, and it provides the necessary commands to update packages to their latest versions or to specific versions as required.
