Hottest Professional-Cloud-Developer Certification & Reliable Professional-Cloud-Developer Exam Tutorial

Many candidates find the Google Professional-Cloud-Developer exam preparation difficult. They often buy expensive study courses to start their Google Professional-Cloud-Developer certification exam preparation. However, spending a huge amount on such resources is difficult for many Google Professional-Cloud-Developer Exam applicants.

Google Certified Professional - Cloud Developer Sample Questions (Q379-Q384):

NEW QUESTION # 379

Case Study 1 - HipLocal
Company Overview

HipLocal is a community application designed to facilitate communication between people in close proximity. It is used for event planning and organizing sporting events, and for businesses to connect with their local communities. HipLocal launched recently in a few neighborhoods in Dallas and is rapidly growing into a global phenomenon. Its unique style of hyper-local community

communication and business outreach is in demand around the world.

Executive Statement

We are the number one local community app; it's time to take our local community services global. Our venture capital investors want to see rapid growth and the same great experience for new local and virtual communities that come online, whether their members are 10 or 10000 miles away from each other.

Solution Concept

HipLocal wants to expand their existing service, with updated functionality, in new regions to better serve their global customers. They want to hire and train a new team to support these regions in their time zones. They will need to ensure that the application scales smoothly and provides clear uptime data.

Existing Technical Environment

HipLocal's environment is a mix of on-premises hardware and infrastructure running in Google Cloud Platform. The HipLocal team understands their application well, but has limited experience in global scale applications. Their existing technical environment is as follows:

- * Existing APIs run on Compute Engine virtual machine instances hosted in GCP.
- * State is stored in a single instance MySQL database in GCP.
- * Data is exported to an on-premises Teradata/Vertica data warehouse.
- * Data analytics is performed in an on-premises Hadoop environment.
- * The application has no logging.
- * There are basic indicators of uptime; alerts are frequently fired when the APIs are unresponsive.

Business Requirements

HipLocal's investors want to expand their footprint and support the increase in demand they are seeing. Their requirements are:

- * Expand availability of the application to new regions.
- * Increase the number of concurrent users that can be supported.
- * Ensure a consistent experience for users when they travel to different regions.
- * Obtain user activity metrics to better understand how to monetize their product.
- * Ensure compliance with regulations in the new regions (for example, GDPR).
- * Reduce infrastructure management time and cost.
- * Adopt the Google-recommended practices for cloud computing.

Technical Requirements

- * The application and backend must provide usage metrics and monitoring.
- * APIs require strong authentication and authorization.
- * Logging must be increased, and data should be stored in a cloud analytics platform.
- * Move to serverless architecture to facilitate elastic scaling.
- * Provide authorized access to internal apps in a secure manner.

Which service should HipLocal use for their public APIs?

- A. Cloud Functions
- B. Shielded Virtual Machines
- C. Cloud Armor
- **D. Cloud Endpoints**

Answer: D

Explanation:

Google Cloud Endpoints is a distributed API management system that provides an API console, hosting, logging, monitoring, and other features to help you create, deploy, and manage APIs on a large scale.

NEW QUESTION # 380

You are developing a new API that creates requests on an asynchronous message service.

Requests will be consumed by different services. You need to expose the API by using a gRPC interface while minimizing infrastructure management overhead. How should you deploy the API?

- **A. Deploy your API as a Cloud Run service. Create a Pub/Sub topic, and configure your API to push messages to the topic.**
- B. Deploy your API to App Engine. Create a Pub/Sub topic, and configure your API to push messages to the topic.
- C. Deploy your API on a Compute Engine instance. Create a Kafka cluster, and configure your API to write messages to the cluster.
- D. Deploy your API to a GKE cluster. Create a Kafka cluster, and configure your API to write messages to the cluster.

Answer: A

Explanation:

<https://techcommunity.microsoft.com/t5/azure-integration-services-blog/introducing-grpc-api-support-in-azure-api-management-self-hosted/ba-p/3975087>

NEW QUESTION # 381

You configured your Compute Engine instance group to scale automatically according to overall CPU usage.

However, your application's response latency increases sharply before the cluster has finished adding up instances. You want to provide a more consistent latency experience for your end users by changing the configuration of the instance group autoscaler.

Which two configuration changes should you make? (Choose two.)

- A. Add the label "AUTOSCALE" to the instance group template.
- B. Decrease the cool-down period for instances added to the group.
- C. Increase the target CPU usage for the instance group autoscaler.
- D. Remove the health-check for individual VMs in the instance group.
- E. Decrease the target CPU usage for the instance group autoscaler.

Answer: A,C

NEW QUESTION # 382

Your development team is using Cloud Build to promote a Node.js application built on App Engine from your staging environment to production. The application relies on several directories of photos stored in a Cloud Storage bucket named webphotos-staging in the staging environment. After the promotion, these photos must be available in a Cloud Storage bucket named webphotos-prod in the production environment. You want to automate the process where possible. What should you do?

A)

Manually copy the photos to webphotos-prod.

B)

Add a startup script in the application's app.yaml file to move the photos from webphotos-staging to webphotos-prod.

C)

Add a build step in the cloudbuild.yaml file before the promotion step with the arguments:

```
- name: gcr.io/cloud-builders/gsutil
  args: ['cp', '-r', 'gs://webphotos-staging',
'gs://webphotos-prod']
  waitFor: ['-']
```

D)

Add a build step in the cloudbuild.yaml file before the promotion step with the arguments:

```
- name: gcr.io/cloud-builders/gcloud
  args: ['cp', '-A', 'gs://webphotos-staging',
'gs://webphotos-prod']
  waitFor: ['-']
```

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Answer: C

Explanation:

Explanation

NEW QUESTION # 383

You are planning to deploy hundreds of microservices in your Google Kubernetes Engine (GKE) cluster. How should you secure communication between the microservices on GKE using a managed service?

- A. Install cert-manager on GKE to automatically renew the SSL certificates.
- B. Install Anthos Service Mesh, and enable mTLS in your Service Mesh.

- C. Deploy open source Istio in your GKE cluster, and enable mTLS in your Service Mesh
- D. Use global HTTP(S) Load Balancing with managed SSL certificates to protect your services

Answer: B

Explanation:

Explanation

https://cloud.google.com/service-mesh/docs/overview#security_benefits

- Ensures encryption in transit. Using mTLS for authentication also ensures that all TCP communications are encrypted in transit.

NEW QUESTION # 384

.....

If you are anxious about whether you can pass your exam and get the certificate, we think you need to buy our Professional-Cloud-Developer study materials as your study tool, our product will lend you a good helping hand. If you are willing to take our Professional-Cloud-Developer study materials into more consideration, it must be very easy for you to pass your exam in a short time. 99% people who have used our Professional-Cloud-Developer Study Materials passed their exam and got their certificate successfully, it is no doubt that it means our Professional-Cloud-Developer study materials have a 99% pass rate. So our product will be a very good choice for you.
