## Reliable Huawei H35-211_V2.5 Test Pattern & Latest H35-211_V2.5 Test Preparation

All the H35-211_V2.5 training files of our company are designed by the experts and professors in the field. The quality of our study materials is guaranteed. According to the actual situation of all customers, we will make the suitable study plan for all customers. If you buy the H35-211_V2.5 learning dumps from our company, we can promise that you will get the professional training to help you pass your exam easily. By our professional training, you will pass your exam and get the related certification in the shortest time.

Huawei H35-211_V2.5 (HCIP-Access V2.5) Certification Exam is an essential certification for professionals who want to work with Huawei's network access solutions. HCIP-Access V2.5 certification demonstrates the candidate's ability to work with Huawei's access network solutions and their understanding of the latest access network technologies. HCIP-Access V2.5 certification also validates the candidate's knowledge of network security and their ability to design secure access networks.

# Huawei HCIP-Access V2.5 Sample Questions (Q38-Q43):

**NEW QUESTION # 38**
The Class D multicast address range is from 224. 0 0 0 to 238. 255 255 255

- A. True
- B. False

**Answer: B**

**NEW QUESTION # 39**
During POL planning and design, device naming rules need to be set.

- A. FALSE
- B. TRUE

**Answer: B**

**NEW QUESTION # 40**
An ODN network must use single-mode fibers.

- A. FALSE
- B. TRUE

**Answer: B**

**NEW QUESTION # 41**
What can cause erratic display in IPTV programs?

- A. Some key frames are lost during line transmission.
- B. Some key frames are lost during program compression.
- C. A rate limit is configured on the device.
- D. The receive or transmit optical power of the device is at a critical value.

**Answer: A,B,C,D**

Explanation:
In Huawei IPTV troubleshooting, mosaic/flash/jerky or intermittent picture typically results from packet loss or bit errors. Common causes include: optical power near the receiver sensitivity threshold causing FEC/BER spikes (A); loss of I-frames (key frames) either in the encoder/compression stage (B) or due to line transmission loss/jitter (D); and device rate-limit (CAR/policing) misconfiguration that drops packets under burst traffic (C). Any of these can yield unstable display.
References: HCIP-Access V2.5 Study Guide - IPTV Service Principles and Fault Location (video artifacts vs. packet loss; optical power thresholds; rate-limit effects); OLT/ONT Video Maintenance Guide - causes of mosaic and black screen.

**NEW QUESTION # 42**
On U2000, if an OLT PON port LED is not green, it indicates the PON port is faulty.

- A. Right
- B. Wrong

**Answer: B**

Explanation:
This is wrong. A PON port LED not green may indicate several states-not only a hardware fault. It can mean the port is administratively shutdown, no ONUs are registered, or the port is in an alarm or idle state depending on the LED color and blinking pattern. Fault requires correlation with alarms and performance counters in U2000, not LED color alone.
