- C. When the igmp match mode disables, you need to configure the multicast program group

- D. Add Lgmp user under BTV, and by default, multicast users can watch 8 programs.

Answer: C

NEW QUESTION # 81

(Single) When deploying home and guest services in a PON system, which of the following services has the highest priority?

- A. IPTV
- B. GAME
- C. VOIP
- D. INTERNET

Answer: C

NEW QUESTION # 82

(Radio) To improve link reliability, the LT device uses two upstream ports 0/19/0 and 0/20/0 to configure a timedelay protection group. Which of the following commands is optional?

- A. huawei(protect-group-0)#protect-group enable
- B. huawei(protect-group-0)#protect-group member port 0/19/0 role work
- C. huawei(config)#protect-group 0 protect-target sth-nni port workmode timedelay
- D. huawei(config)#interface giu 0/19 huawei(config-if-giu-0/19)#offline-tx-off-time 0 500

Answer: D

Explanation:

For Huawei uplink protection (STH-NNI port protection) with workmode timedelay, the mandatory steps are:

Create/define the protection group with the protect-target and workmode timedelay; Add member ports with roles (work/protect); Enable the protection group.

Interface-level timers like offline-tx-off-time under the physical interface are not required for standard timedelay protection operation and are therefore optional.

NEW QUESTION # 83

(Multi-select) VLAN planning principles need to be considered:

- A. Uplink networking mode
- B. The networking topology of the OLT
- C. Customer type and number of users
- D. The total number of VLANs
- E. Type and quantity of services

Answer: A,B,C,D,E

Explanation:

Huawei VLAN planning considers overall VLAN scale, user categories and volume, service types (HSI/IPTV /VoIP) and their isolation, uplink/aggregation mode (e.g., QinQ, VXLAN interwork), and device/topology constraints (e.g., OLT slot/board distribution). All listed factors affect VLAN count, tagging scheme, and scalability.

NEW QUESTION # 84

OLT can perform traffic shaping through service-port.

- A. False
- B. True

Answer: A

Explanation:

On Huawei OLTs, the service-port is a binding between the user-side access (ONT/port) and a VLAN/GEM channel, and it supports traffic policing (CAR/rate-limit) by referencing a traffic/queue profile. Traffic shaping (buffer-based smoothing, token bucket with queue drain) is provided on ports/queues or GEM/LLID directions, not on the service-port object itself. Therefore, shaping is not performed via the service-port; applying a traffic profile there enforces policing, not shaping.
