Reliable Professional-Cloud-DevOps-Engineer Study Plan & Professional-Cloud-DevOps-Engineer Official Practice Test

You may attend many certificate exams but you unfortunately always fail in or the certificates you get can't play the rules you want and help you a lot. So what certificate exam should you attend and what method should you use to let the certificate play its due role? You should choose the test Google certification and buy our Professional-Cloud-DevOps-Engineer learning file to solve the problem. Passing the test Professional-Cloud-DevOps-Engineer certification can help you increase your wage and be promoted easily and buying our Professional-Cloud-DevOps-Engineer prep guide dump can help you pass the test smoothly. Our Professional-Cloud-DevOps-Engineer Certification material is closely linked with the test and the popular trend among the industries and provides all the information about the test. The answers and questions seize the vital points and are verified by the industry experts. Diversified functions can help you get an all-around preparation for the test. Our online customer service replies the clients' questions about our Professional-Cloud-DevOps-Engineer certification material at any time.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q151-Q156):

NEW QUESTION # 151

You recently deployed your application in Google Kubernetes Engine (GKE) and now need to release a new version of the application. You need the ability to instantly roll back to the previous version of the application in case there are issues with the new version. Which deployment model should you use?

- A. Perform a blue/green deployment and test your new application after the deployment is complete
- B. Perform A/B testing, and test your application periodically after the deployment is complete

- C. Perform a rolling deployment and test your new application after the deployment is complete
- D. Perform a canary deployment, and test your new application periodically after the new version is deployed

Answer: A

NEW QUESTION # 152

You support an e-commerce application that runs on a large Google Kubernetes Engine (GKE) cluster deployed on-premises and on Google Cloud Platform. The application consists of microservices that run in containers. You want to identify containers that are using the most CPU and memory. What should you do?

- **A. Use Prometheus to collect and aggregate logs per container, and then analyze the results in Grafana.**
- B. Use Stackdriver Logging to export application logs to BigQuery, aggregate logs per container, and then analyze CPU and memory consumption.
- C. Use the Stackdriver Monitoring API to create custom metrics, and then organize your containers using groups.
- D. Use Stackdriver Kubernetes Engine Monitoring.

Answer: A

NEW QUESTION # 153

You need to reduce the cost of virtual machines (VM) for your organization. After reviewing different options, you decide to leverage preemptible VM instances. Which application is suitable for preemptible VMs?

- A. A distributed, eventually consistent NoSQL database cluster with sufficient quorum
- B. The organization's public-facing website
- C. A scalable in-memory caching system
- **D. A GPU-accelerated video rendering platform that retrieves and stores videos in a storage bucket**

Answer: D

Explanation:

<https://cloud.google.com/compute/docs/instances/preemptible>

NEW QUESTION # 154

Your company follows Site Reliability Engineering practices. You are the person in charge of Communications for a large, ongoing incident affecting your customer-facing applications. There is still no estimated time for a resolution of the outage. You are receiving emails from internal stakeholders who want updates on the outage, as well as emails from customers who want to know what is happening. You want to efficiently provide updates to everyone affected by the outage. What should you do?

- A. Focus on responding to internal stakeholders at least every 30 minutes. Commit to "next update" times.
- B. Provide all internal stakeholder emails to the Incident Commander, and allow them to manage internal communications. Focus on providing responses directly to customers.
- C. Delegate the responding to internal stakeholder emails to another member of the Incident Response Team. Focus on providing responses directly to customers.
- **D. Provide periodic updates to all stakeholders in a timely manner. Commit to a "next update" time in all communications.**

Answer: D

Explanation:

Explanation

When disaster strikes, the person who declares the incident typically steps into the IC role and directs the high-level state of the incident. The IC concentrates on the 3Cs and does the following: Commands and coordinates the incident response, delegating roles as needed. By default, the IC assumes all roles that have not been delegated yet. Communicates effectively. Stays in control of the incident response. Works with other responders to resolve the incident. <https://sre.google/workbook/incident-response/>

NEW QUESTION # 155

A third-party application needs to have a service account key to work properly When you try to export the key from your cloud

project you receive an error "The organization policy constraint iam.disableServiceAccountKeyCreation is enforcedM You need to make the third-party application work while following Google-recommended security practices What should you do?

- A. Add a rule to set the iam.disableServiceAccountKeyCreation policy to off in your project and create a key.
- B. Disable the service account key creation policy at the project's folder, and download the default key
- C. Enable the default service account key. and download the key
- D. Remove the iam.disableServiceAccountKeyCreation policy at the organization level, and create a key.

Answer: A

Explanation:

The best option for making the third-party application work while following Google-recommended security practices is to add a rule to set the iam.disableServiceAccountKeyCreation policy to off in your project and create a key. The iam.disableServiceAccountKeyCreation policy is an organization policy that controls whether service account keys can be created in a project or organization. By default, this policy is set to on, which means that service account keys cannot be created. However, you can override this policy at a lower level, such as a project, by adding a rule to set it to off. This way, you can create a service account key for your project without affecting other projects or organizations. You should also follow the best practices for managing service account keys, such as rotating them regularly, storing them securely, and deleting them when they are no longer needed.

NEW QUESTION # 156

.....

TestPassed provides Google Cloud Certified - Professional Cloud DevOps Engineer Exam Professional-Cloud-DevOps-Engineer desktop-based practice software for you to test your knowledge and abilities. The Google Cloud Certified - Professional Cloud DevOps Engineer Exam Professional-Cloud-DevOps-Engineer desktop-based practice software has an easy-to-use interface. You will become accustomed to and familiar with the free demo for Google Cloud Certified - Professional Cloud DevOps Engineer Exam Professional-Cloud-DevOps-Engineer Exam Questions. Exam self-evaluation techniques in our Google Cloud Certified - Professional Cloud DevOps Engineer Exam Professional-Cloud-DevOps-Engineer desktop-based software include randomized questions and timed tests. These tools assist you in assessing your ability and identifying areas for improvement to pass the Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification exam.
