

# Test Network-Security-Essentials Simulator Fee | Network-Security-Essentials Exam Sample Online

P.S. Free & New Network-Security-Essentials dumps are available on Google Drive shared by Test4Engine:  
<https://drive.google.com/open?id=1QmCweOxuOCN9CPesmFd2jW1xO90AOema>

Test4Engine is a very wonderful and effective platform to give chances to our worthy clients who want to achieve their expected scores and gain their Network-Security-Essentials certifications. With our professional experts' tireless efforts, our Network-Security-Essentials exam guide is equipped with a simulated examination system with timing function, allowing you to examine your learning results at any time, keep checking for defects, and improve your strength. And you can be satisfied with our Network-Security-Essentials learning guide.

Our Network-Security-Essentials practice engine has collected the frequent-tested knowledge into the content for your reference according to our experts' years of diligent work. So our Network-Security-Essentials exam materials are triumph of their endeavor. By resorting to our Network-Security-Essentials practice materials, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our training engine, the passing rate is 98-100 percent. So your chance of getting success will be increased greatly by our Network-Security-Essentials Exam Questions.

## Free PDF Quiz Network-Security-Essentials Network Security Essentials for Locally-Managed Fireboxes Latest Test Simulator Fee

However, Test4Engine saves your money by offering Network-Security-Essentials real questions at an affordable price. In addition, we offer up to 12 months of free Network-Security-Essentials exam questions. This way you can save money even if Network-Security-Essentials introduces fresh Network Security Essentials for Locally-Managed Fireboxes Network-Security-Essentials exam updates. Purchase the WatchGuard Network-Security-Essentials preparation material to get certified on the first attempt.

## WatchGuard Network Security Essentials for Locally-Managed Fireboxes Sample Questions (Q19-Q24):

### NEW QUESTION # 19

After you enable content inspection, your users see a certificate warning when they browse the Internet. What is one way to resolve this? (Select one.)

- A. Configure the HTTPS proxy policy to allow inbound traffic from your CA
- B. Configure a WebBlocker exception for your certificate server
- C. Import a trusted web server certificate to the Firebox
- **D. Install the current Firebox Proxy Authority certificate on your user workstations**

**Answer: D**

Explanation:

When content inspection is enabled on a Firebox, it decrypts HTTPS traffic for inspection, which requires presenting its own certificate to the client devices. This often causes certificate warnings in web browsers because the certificate issued by the Firebox is not inherently trusted by the client browsers. To resolve this, you need to install the Firebox's Proxy Authority certificate on each user's workstation as a trusted certificate. This action will prevent browsers from displaying certificate warnings, as they will recognize the Firebox certificate as a trusted source for secure connections.

#### NEW QUESTION # 20

What type of NAT enables clients on a private network to connect to servers on the Internet? (Select one.)

- A. Static NAT
- B. NAT loopback
- C. Dynamic NAT
- D. Hairpin NAT

**Answer: C**

Explanation:

Dynamic NAT enables clients on a private network to connect to servers on the Internet. By translating private IP addresses to a public IP address (or pool of addresses), Dynamic NAT allows multiple devices within a private network to access external resources on the Internet. This form of NAT is essential in conserving IP addresses and maintaining privacy for internal network topologies.

#### NEW QUESTION # 21

You want to send traffic from the Internet to your internal web server through the Firebox. You see the traffic is allowed in Traffic Monitor, but the web server cannot be reached. You use the TCP Dump Diagnostic Task and collect this information from the Firebox interface connected to the web server.

What could cause the problem? (Select two.)

- A. The web server has firewall software installed that blocks incoming connections.
- B. The HTTPS proxy is blocking the connection because Gateway AntiVirus detected a virus
- C. The Firebox Dynamic NAT rules are configured incorrectly
- D. The IP address of the web server is on the Firebox Blocked Sites list
- E. The web server default gateway is configured incorrectly

**Answer: A,E**

Explanation:

\* Firewall Software Blocking Connections: If the web server has its own firewall software, it may be configured to block incoming connections. This would prevent the server from responding to requests, even if the Firebox is allowing the traffic through.

\* Incorrect Default Gateway Configuration: If the web server's default gateway is not correctly set to route through the Firebox, it will be unable to respond to inbound traffic routed from external sources.

This misconfiguration is a common cause of connectivity issues in environments with complex network setups.

These two issues often lead to situations where the Firebox allows traffic, but the destination server is unreachable due to internal configurations.

#### NEW QUESTION # 22

You have just configured Mobile VPN with IKEv2 for your customer. By default, authenticated Mobile VPN users are allowed to send traffic to all Firebox networks through the VPN.

- A. False
- B. True

**Answer: A**

Explanation:

In the default configuration of Mobile VPN with IKEv2, authenticated VPN users are only allowed access to specified networks or resources as defined by the VPN policy. They do not automatically have access to all Firebox networks through the VPN. To enable access to specific networks, administrators need to configure access routes explicitly within the Mobile VPN settings.

### NEW QUESTION # 23

You want to create a branch office VPN virtual interface between a remote Firebox and your headquarters Firebox so the remote Firebox can send log data to a server at headquarters. For the log data to be sent from the remote Firebox over the VPN successfully, what BOVPN virtual interface setting must you configure?

(Select one.)

- A. IKEv2 in the Phase 1 settings
- B. Perfect Forward Secrecy (PFS)
- C. An IPSec certificate, instead of a Pre-shared key
- D. Dead Peer Detection (DPD)
- E. Virtual IP addresses

**Answer: E**

Explanation:

To enable the remote Firebox to send log data to a server at headquarters through a Branch Office VPN (BOVPN) virtual interface, you must configure Virtual IP addresses. Virtual IPs enable devices on either end of the VPN tunnel to communicate as if they are on the same network, facilitating routing of log data from the remote Firebox to the log server located at headquarters.

Other options like IPSec certificates and IKEv2 are not specifically required for this configuration, though they can enhance security. Dead Peer Detection (DPD) and Perfect Forward Secrecy (PFS) are useful for maintaining VPN stability and security but are not directly necessary for enabling log transmission.

### NEW QUESTION # 24

.....

With more than thousands of satisfied applicants in multiple countries, we guarantee that you will clear the WatchGuard Network-Security-Essentials exam as quickly as possible by using our product. In this way, Exams.Solutions save you time and money. In addition to all these excellent offers, in any case despite properly studying with Network-Security-Essentials Practice Test material.
