

# Vce Managing-Cloud-Security File | Managing-Cloud-Security Most Reliable Questions

BTW, DOWNLOAD part of Prep4pass Managing-Cloud-Security dumps from Cloud Storage: <https://drive.google.com/open?id=1gLDGAAO851SyM13qEy5ArEZllblvXQ3q>

If you are troubled with Managing-Cloud-Security exam, you can consider down our free demo. You will find that our latest Managing-Cloud-Security exam torrent are perfect paragon in this industry full of elucidating content for exam candidates of various degree to use. Our results of latest Managing-Cloud-Security exam torrent are startlingly amazing, which is more than 98 percent of exam candidates achieved their goal successfully. The latest Managing-Cloud-Security Exam Torrent covers all the qualification exam simulation questions in recent years, including the corresponding matching materials at the same time.

For your information, the passing rate of our Managing-Cloud-Security study questions is over 98% up to now. Up to now our Managing-Cloud-Security practice materials consist of three versions, all those three basic types are favorites for supporters according to their preference and inclinations. On your way moving towards success, our Managing-Cloud-Security Preparation materials will always serves great support. And you can contact us at any time since we are serving online 24/7.

## Free PDF WGU - Managing-Cloud-Security Perfect Vce File

The precision and accuracy of Prep4pass's dumps are beyond other exam materials. They are time-tested and approved by the veteran professionals who recommend them as the easiest way-out for Managing-Cloud-Security certification tests. Managing-Cloud-Security Exam Materials constantly updated by our experts, enhancing them in line with the changing standards of real exam criteria. Therefore, our Managing-Cloud-Security dumps prove always compatible to your academic requirement.

## WGU Managing Cloud Security (JY02) Sample Questions (Q99-Q104):

### NEW QUESTION # 99

Which cloud model is owned and operated by a vendor and then sold, leased, or rented to someone else?

- A. Hybrid
- B. Private
- C. Public
- D. Community

**Answer: C**

Explanation:

The Public cloud model is owned and operated by a vendor and offered to customers through sale, lease, or rental arrangements. Managing Cloud principles describe public cloud providers as entities that deliver shared infrastructure, platforms, or applications to multiple customers over the internet.

In this model, the cloud service provider manages the infrastructure, maintenance, and security of the environment, while customers consume services on a pay-as-you-go or subscription basis. Public clouds offer scalability, flexibility, and cost efficiency but provide less control over underlying systems.

Private clouds are dedicated to a single organization, hybrid clouds combine multiple models, and community clouds serve specific groups. Therefore, the public cloud model best fits the description.

#### **NEW QUESTION # 100**

Which factor should be the basis of a business continuity plan?

- A. Customers
- **B. Risks**
- C. Locations
- D. Costs

**Answer: B**

Explanation:

Risk is the foundational factor upon which a business continuity plan (BCP) should be based. Managing Cloud principles explain that BCP development begins with identifying and analyzing risks that could disrupt critical business operations.

Risk assessment evaluates threats, vulnerabilities, and potential impacts, allowing organizations to prioritize resources and define recovery strategies. By focusing on risk, organizations ensure that continuity planning addresses the most significant threats to operations, data, and services.

Costs, customers, and locations are important considerations but are secondary to risk analysis. Therefore, risks form the correct basis for a business continuity plan.

#### **NEW QUESTION # 101**

Which option should a cloud architect recommend to an organization looking to simplify development and management of applications?

- A. Infrastructure as a Service (IaaS)
- B. Desktop as a Service (DaaS)
- C. Software as a Service (SaaS)
- **D. Platform as a Service (PaaS)**

**Answer: D**

Explanation:

Platform as a Service (PaaS) is the recommended option for organizations seeking to simplify application development and management. Managing Cloud guidance explains that PaaS provides a complete development environment, including operating systems, runtime environments, middleware, databases, and development tools.

By abstracting infrastructure and platform management, PaaS allows developers to focus exclusively on building, testing, and deploying applications. Tasks such as patching, scaling, load balancing, and environment configuration are handled by the cloud provider, reducing complexity and administrative effort.

DaaS focuses on delivering virtual desktops, IaaS requires customers to manage operating systems and applications, and SaaS provides fully developed applications rather than development platforms. Therefore, PaaS best meets the requirement of simplifying development and management.

#### **NEW QUESTION # 102**

Which concept focuses on operating highly available workloads in the cloud?

- **A. Reliability**
- B. Operational excellence

- C. Resource hierarchy
- D. Security

**Answer: A**

Explanation:

Reliability in cloud design ensures workloads can recover quickly from disruptions and continue operating as expected. This concept focuses on high availability, fault tolerance, and disaster recovery. Reliability requires implementing redundancy, backup strategies, and robust monitoring.

Security ensures data protection, operational excellence covers continuous improvement, and resource hierarchy refers to organizational structures, but none focus specifically on availability and resilience.

By prioritizing reliability, organizations design cloud architectures capable of withstanding failures at multiple layers—compute, storage, networking, and even regions. This design principle ensures customer trust and compliance with service-level agreements.

### NEW QUESTION # 103

Which category of cloud service provides on-demand, self-service access to basic building blocks, such as virtualized servers, block storage, and networking capacity, that can be used to create custom IT solutions?

- A. Networking as a service (NaaS)
- B. Software as a service (SaaS)
- C. Platform as a service (PaaS)
- **D. Infrastructure as a service (IaaS)**

**Answer: D**

Explanation:

Infrastructure as a Service (IaaS) delivers fundamental computing resources over the cloud. These include virtual machines, block storage, networking, and load balancers. Customers use these resources to build and manage custom IT solutions, while the provider manages the underlying hardware.

PaaS abstracts infrastructure further, providing a development environment for applications without requiring infrastructure management. SaaS delivers fully functional applications over the internet. NaaS is a narrower category focusing on network delivery. IaaS is the correct answer because it gives maximum flexibility and control compared to the other models, allowing organizations to build tailored environments. It also requires customers to manage operating systems, middleware, and runtime security, making shared responsibility an essential part of the model.

### NEW QUESTION # 104

.....

Our Managing-Cloud-Security exam torrent offers you free demo to try before buying. You will get your downloading link and password after the payment, and you can download Managing-Cloud-Security exam dumps right now. If you have any questions, you can directly contact us through online live chat or you can notify us through email, we will give you reply as soon as we can. In addition, we provide you free update for one year after purchasing the Managing-Cloud-Security Exam Dumps.
