## Marvelous Exam B2B-Commerce-Developer Study Solutions by ExamDumpsVCE

Some of our new customers will suppose that it will cost a few days to send them our B2B-Commerce-Developer exam questions after their purchase. But in fact, only in 5 to 10 minutes after payment, you can use B2B-Commerce-Developer preparation materials very fluently. We know you are very busy, so we will not waste any extra time. In this fast-paced society, you must cherish every minute. Using B2B-Commerce-Developer training quiz is really your most efficient choice.

## Salesforce Accredited B2B Commerce Developer Sample Questions (Q169-

## Q174):

### NEW QUESTION # 169

What does the developer need to implement to override Shipping in Checkout? 38m 04s

- A. `sfdc_commerce.CartShippingCharges`
- **B. `sfdc_checkout.CartShippingCharges`**
- C. `sfdc_commerce.ShippingCharges`
- D. `sfdc_checkout.ShippingCharges`

**Answer: B**

Explanation:

To override shipping charges during the checkout process, the developer needs to implement a specific interface, `likelysfdc_checkout.CartShippingCharges`. This interface would allow for custom logic to calculate and apply shipping charges based on the cart's contents and other criteria, ensuring flexibility and accuracy in handling shipping costs within the checkout flow.

### NEW QUESTION # 170

What are three advantages of using `ccLog` over the Salesforce standard `System.debug` class? (3 answers)

- A. `ccLog` can debug syntax errors found in the JavaScript.
- B. There is no need to create a User Trace Flag.
- **C. Append `#ccLog=<Logging Token Name>` to the end of the storefront URL in order to get logs in the inspector console.**
- **D. There is no need to use string concatenation to easily tag log statements with a subject.**
- **E. There is no need to manually set a cookie to debug with the Site Guest User.**

**Answer: C,D,E**

Explanation:

Three advantages of using `ccLog` over the Salesforce standard `System.debug` class are:

There is no need to use string concatenation to easily tag log statements with a subject. `ccLog` allows passing a subject parameter to the log method, which will prepend the subject to the log message. For example, `ccLog.log('This is a message', 'Subject')` will log `[Subject] This is a message`.

There is no need to create a User Trace Flag. `ccLog` can be enabled by setting the value of `CO.logToken` to true in `CCAdmin`, which will activate logging for all users who access the storefront.

There is no need to manually set a cookie to debug with the Site Guest User. `ccLog` can be enabled for the Site Guest User by appending `#ccLog=<Logging Token Name>` to the end of the storefront URL in order to get logs in the inspector console. For example, `https://my-storefront.com/#ccLog=debug` will enable logging for the Site Guest User with the debug level. Salesforce Reference: B2B Commerce and D2C Commerce Developer Guide, Logging

### NEW QUESTION # 171

Which two methods from the `platformResourceLoader` module are relevant for including third party JavaScript and CSS in a Lightning web component?

- A. `loadCss`
- **B. `loadScript`**
- **C. `loadStyle`**
- D. `loadClientScript`

**Answer: B,C**

Explanation:

Two methods from the `platformResourceLoader` module that are relevant for including third party JavaScript and CSS in a Lightning web component are `loadScript` and `loadStyle`. The `platformResourceLoader` module is a module that provides methods for loading JavaScript or CSS files from static resources or external URLs into a Lightning web component. The `loadScript` method is used to load a JavaScript file and execute it in the component. The `loadStyle` method is used to load a CSS file and apply it to the component. The `loadClientScript` method does not exist or is not relevant for including third party JavaScript in a Lightning web component. The `loadCss` method does not exist or is not relevant for including third party CSS in a Lightning web component.

#### NEW QUESTION # 172

What is a valid way of referencing the CC Cart Object whose API name is E\_Cart\_\_c in a SOQL query?

- A. `ccrz__E_Cart__c`
- B. `_Cart__c`
- C. `c.E_Cart__c`
- D. `cloudcraze__E_Cart__c`

**Answer: A**

#### NEW QUESTION # 173

A developer is writing custom code to compare External Prices and Sales Prices for cart items. What should be returned if the External Prices are the same as Sales Prices for Products in the Cart? ~.

- A. `sfdc_checkout.IntegrationStatus.Success.FAILED`
- B. `sfdc_checkout.IntegrationStatus.Status.SUCCESS`
- C. `sfdc_checkout.IntegrationStatus.Status.ERROR`
- D. `sfdc_checkout.IntegrationStatus.Status.SUCCEEDED`

**Answer: B**

Explanation:

Similar to question 198, when custom code compares external prices with sales prices for cart items and finds them to be the same, the appropriate return value should indicate a successful comparison (such as `sfdc_checkout.IntegrationStatus.Status.SUCCESS`). This signifies that the external prices are aligned with the sales prices, and there are no conflicts.

#### NEW QUESTION # 174

.....

Constant learning is necessary in modern society. If you stop learning new things, you cannot keep up with the times. Our B2B-Commerce-Developer study materials cover all newest knowledge for you to learn. In addition, our B2B-Commerce-Developer learning braindumps just cost you less time and efforts.
