There are great and plenty benefits after the clients pass the Professional-Cloud-Developer test. Because the knowledge that our Professional-Cloud-Developer exam practice materials provides is conducive to enhancing the client's practical working abilities and stocks of knowledge, the clients will be easier to increase their wages and be promoted by their boss. Besides, they will be respected by their colleagues, friends and family members and be recognized as the elites among the industry. They will acquire more access to work abroad for further studies. So the clients must appreciate our Professional-Cloud-Developer study question after they pass the test.

Google Professional-Cloud-Developer certification exam is a challenging but rewarding credential that validates one's expertise in developing cloud-native applications on the Google Cloud Platform. Google Certified Professional - Cloud Developer certification is ideal for developers who work with Google Cloud technologies and want to demonstrate their skills to potential employers or clients. If you are interested in pursuing this certification, it is recommended that you have a solid understanding of cloud application development principles, containerization technologies, and best practices for building scalable and secure applications.

Google Professional-Cloud-Developer Exam covers a wide range of topics related to cloud development, including application deployment, security, monitoring, and troubleshooting. Professional-Cloud-Developer exam consists of multiple-choice and scenario-based questions that assess the candidate's ability to apply their knowledge to real-world scenarios. Professional-Cloud-Developer Exam is timed, and candidates have two hours to complete it.

Employment and Salary Opportunities

After completing the Google Professional Cloud Developer certification exam, the candidates possess all the knowledge and skills necessary for building scalable and highly available applications with the help of Google-recommended practices and tools. The expertise that you gain while preparing for the qualifying test provides you with access to numerous in-demand and high-paying jobs. Some of the roles that you can apply for after getting certified include a Cloud Infrastructure Engineer, a Google Cloud Platform Cloud Engineer, a Senior Software Engineer, a Python Backend Developer, a Java Developer, a Cloud DevOps Engineer, a Cloud Technical Solutions Developer, and a Google Cloud Platform (GCP) Architect, among others. The average salary associated with

these job titles ranges between \$86,500 and \$207,500 per year.

Quiz Google - Fantastic Pass Professional-Cloud-Developer Exam

With Professional-Cloud-Developer test guide, you only need a small bag to hold everything you need to learn. In order to make the learning time of the students more flexible, Professional-Cloud-Developer exam materials specially launched APP, PDF, and PC three modes. With the APP mode, you can download all the learning information to your mobile phone. In this way, whether you are in the subway, on the road, or even shopping, you can take out your mobile phone for review. Professional-Cloud-Developer study braindumps also offer a PDF mode that allows you to print the data onto paper so that you can take notes as you like and help you to memorize your knowledge.

Google Certified Professional - Cloud Developer Sample Questions (Q121-Q126):

NEW QUESTION # 121

The new version of your containerized application has been tested and is ready to deploy to production on Google Kubernetes Engine. You were not able to fully load-test the new version in pre-production environments, and you need to make sure that it does not have performance problems once deployed. Your deployment must be automated. What should you do?

- A. Use Cloud Load Balancing to slowly ramp up traffic between versions. Use Cloud Monitoring to look for performance issues.
- B. Deploy the application via a continuous delivery pipeline using canary deployments. Use Cloud Monitoring to look for performance issues, and ramp up traffic as the metrics support it.
- C. Deploy the application using kubectl and set the spec.updateStrategy.type to RollingUpdate. Use Cloud Monitoring to look for performance issues, and run the kubectl rollback command if there are any issues.
- **D. Deploy the application via a continuous delivery pipeline using blue/green deployments. Use Cloud Monitoring to look for performance issues, and launch fully when the metrics support it.**

Answer: D

Explanation:

https://cloud.google.com/architecture/implementing-deployment-and-testing-strategies-on-gke#perform_a_bluegreen_deployment

NEW QUESTION # 122

You are using Cloud Build to build a Docker image. You need to modify the build to execute unit and run integration tests. When there is a failure, you want the build history to clearly display the stage at which the build failed. What should you do?

- A. Create a Cloud Build build config file with a single build step to compile unit and integration tests.
- B. Add RUN commands in the Dockerfile to execute unit and integration tests.
- C. Create a Cloud Build build config file that will spawn a separate cloud build pipeline for unit and integration tests.
- **D. Create a Cloud Build build config file with separate cloud builder steps to compile and execute unit and integration tests.**

Answer: D

NEW QUESTION # 123

You recently developed an application that monitors a large number of stock prices. You need to configure Pub/Sub to receive messages and update the current stock price in an in-memory database. A downstream service needs the most up-to-date prices in the in-memory database to perform stock trading transactions. Each message contains three pieces of information:

- Stock symbol
- Stock price
- Timestamp for the update

How should you set up your Pub/Sub subscription?

- A. Create a pull subscription with both ordering and exactly-once delivery turned off.

- B. Create a pull subscription with ordering enabled, using the stock symbol as the ordering key.
- **C. Create a push subscription with exactly-once delivery enabled.**
- D. Create a push subscription with both ordering and exactly-once delivery turned off.

Answer: C

NEW QUESTION # 124

You are developing a new application. You want the application to be triggered only when a given file is updated in your Cloud Storage bucket. Your trigger might change, so your process must support different types of triggers. You want the configuration to be simple so that multiple team members can update the triggers in the future. What should you do?

- A. Configure Cloud Storage events to be sent to Pub/Sub, and use Pub/Sub events to trigger a Cloud Build job that executes your application.
- B. Create an Eventarc trigger that monitors your Cloud Storage bucket for a specific filename, and set the target as Cloud Run.
- **C. Configure a Cloud Function that executes your application and is triggered when an object is updated in Cloud Storage.**
- D. Configure a Firebase function that executes your application and is triggered when an object is updated in Cloud Storage.

Answer: C

Explanation:

<https://cloud.google.com/functions/docs/calling>

NEW QUESTION # 125

You work on an application that relies on Cloud Spanner as its main datastore. New application features have occasionally caused performance regressions. You want to prevent performance issues by running an automated performance test with Cloud Build for each commit made. If multiple commits are made at the same time, the tests might run concurrently. What should you do?

- A. Start the Cloud Spanner emulator locally. Load the required data. Shut down the emulator after the test is run.
- B. Create a new project with a random name for every build. Load the required data. Delete the project after the test is run.
- **C. Create a new Cloud Spanner instance for every build. Load the required data. Delete the Cloud Spanner instance after the test is run.**
- D. Create a project with a Cloud Spanner instance and the required data. Adjust the Cloud Build build file to automatically restore the data to its previous state after the test is run.

Answer: C

Explanation:

<https://cloud.google.com/spanner/docs/emulator#limitations>

NEW QUESTION # 126

.....

Professional-Cloud-Developer practice exam enables applicants to practice time management, answer strategies, and all other elements of the final Google Certified Professional - Cloud Developer (Professional-Cloud-Developer) certification exam and can check their scores. The exhaustive report enrollment database allows students to evaluate their performance and prepare for the Google Certified Professional - Cloud Developer (Professional-Cloud-Developer) certification exam without further difficulty.
