

C_TS470_2412 Mock Exam | Efficient C_TS470_2412: SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service

What's more, part of that Dumpkiller C_TS470_2412 dumps now are free: <https://drive.google.com/open?id=1tFRwMCrFL2npvPqX2eUrme6UmlDjh5V3>

It's important for the safety of the website while buying the C_TS470_2412 Exam Bootcamp online. We have in this business for years and the professional of our team will check the website timely, if you buy the C_TS470_2412 exam bootcamp of us, we can ensure the safety of yours, and if you indeed have some problems while operating, you can contact us, we will handle it for you. Safety is very important, it can help you avoid many unnecessary troubles.

SAP C_TS470_2412 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.
Topic 2	<ul style="list-style-type: none"> Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.

Topic 3	<ul style="list-style-type: none"> • Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.
Topic 4	<ul style="list-style-type: none"> • Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.

Cheap C_TS470_2412 Dumps - C_TS470_2412 Reliable Dumps Sheet

The SAP C_TS470_2412 certification exam is one of the top rated career advancement certification exams in the market. This SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C_TS470_2412) exam is designed to prove candidates' skills and knowledge levels. By doing this the SAP C_TS470_2412 certificate holders can gain multiple personal and professional benefits. These benefits assist the C_TS470_2412 Exam holder to pursue a rewarding career in the highly competitive market and achieve their career objectives in a short time period.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q71-Q76):

NEW QUESTION # 71

What options does a service planner have to influence the maintenance plan schedule? Note: There are 3 correct answers to this question.

- A. Freeze call
- B. Release call
- C. Fix call
- D. Copy call
- E. Skip call

Answer: A,C,E

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, a service planner can influence the maintenance plan schedule using specific actions to manage service calls effectively. The maintenance plan schedule is part of the recurring services process, where maintenance plans generate service calls based on defined cycles (e.g., time-based or counter-based). The options available to influence this schedule include:

* Freeze call: This option allows the planner to lock a scheduled call, preventing it from being rescheduled or regenerated automatically until it is unfrozen. It ensures stability in planning for critical service events.

* Skip call: This allows the planner to bypass a specific scheduled call without affecting the overall schedule. It's useful when a service event is not required at a particular time (e.g., due to customer availability).

* Fix call: This option fixes a call at a specific date, ensuring it remains scheduled as planned and is not shifted by automatic rescheduling processes. It provides control over critical service timing.

* Copy call and Release call are not standard options for directly influencing the maintenance plan schedule. Copying a call might be a manual workaround in some scenarios, but it's not a documented feature for schedule influence. Releasing a call is part of execution (e.g., releasing a service order), not schedule planning. These capabilities are detailed in the SAP S/4HANA Service documentation under recurring services and maintenance planning features, such as scope item 3MO (Service Contract Management). "In the maintenance plan scheduling, planners can freeze, skip, or fix calls to adjust the schedule according to operational needs." (SAP Signavio Process Navigator, Solution Process: Recurring Services).

NEW QUESTION # 72

What are possible steps in an in-house repair process in SAP S/4HANA Cloud Private Edition, Service? Note: There are 3 correct answers to this question.

- A. Post a goods receipt for a returned object.
- B. Generate a repair object based on the repair order status.
- C. Create an in-house repair for a repair request from a customer.
- D. Perform a pre-check for an in-house repair and make a decision.
- E. Create an in-house repair after a pre-check for a repair object.

Answer: A,C,D

Explanation:

The in-house repair process (scope item 3XK) in SAP S/4HANA Cloud Private Edition, Service involves handling customer repair requests and processing returned objects. Key steps include:

- * Perform a pre-check for an in-house repair and make a decision: A pre-check assesses the repair object's condition to decide whether to proceed with repair, reject it, or take other actions. This is a standard initial step.
- * Post a goods receipt for a returned object: When a customer returns a defective item, a goods receipt is posted (e.g., via transaction MIGO or a service order), creating a repair object in the system.
- * Create an in-house repair for a repair request from a customer: This step involves creating a repair order (e.g., transaction type REPA) based on a customer's request, initiating the process.
- * Generate a repair object based on the repair order status: Repair objects are not generated from order status; they are created upon goods receipt or manually.
- * Create an in-house repair after a pre-check for a repair object: While a pre-check precedes repair, the repair order is typically created first, not after the pre-check as a separate step. These steps align with the SAP Best Practices for in-house repair. "The in-house repair process includes performing a pre-check, posting goods receipt for returns, and creating a repair order based on customer requests." (SAP Signavio Process Navigator, In-House Repair).

NEW QUESTION # 73

For a maintenance plan, how do the call date and the planned date relate to each other?

- A. The call date is equal to the planned date if the previously called service order is not yet confirmed.
- B. The call date is usually before the planned date, to create a preprocessing phase.
- C. The goal of scheduling is to minimize the time period between the call date and the planned date.
- D. The planned date is always before the call date, to not create inconsistencies.

Answer: B

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, a maintenance plan is used to schedule recurring service or maintenance activities. The call date represents the date when the system generates a call object (e.g., a service order) based on the maintenance plan's scheduling parameters, such as cycles or intervals. The planned date, on the other hand, is the date when the actual execution of the service or maintenance activity is scheduled to occur.

Option B states that "the call date is usually before the planned date, to create a preprocessing phase," which aligns with standard SAP functionality. The call date typically precedes the planned date to allow time for preparation, such as resource allocation, spare parts planning, or technician scheduling. This preprocessing phase ensures that all prerequisites are in place before the service is executed. The difference between these dates is influenced by the call horizon, a parameter in the maintenance plan that defines how far in advance the call object is generated relative to the planned execution date.

Option A is incorrect because the call date being equal to the planned date is not a default rule; it depends on specific configurations (e.g., a call horizon of 0%), which is not typical. Option C is a goal of scheduling but does not directly describe the relationship between the dates. Option D is incorrect because the planned date is not always before the call date-this would contradict the purpose of scheduling, as the call initiates the process leading to the planned execution.

"The call date is determined by the scheduling parameters of the maintenance plan, including the call horizon, which specifies the lead time before the planned date. This allows for a preprocessing phase to prepare for the service execution."

NEW QUESTION # 74

Which type of objects can you maintain in the object list assigned to a contract item? Note: There are 3 correct answers to this question.

- A. Functional location
- B. Equipment bill of material
- C. Equipment
- D. Product
- E. Document

Answer: A,C,D

NEW QUESTION # 75

Which cancellation information can you maintain on service contract item level? Note: There are 2 correct answers to this question.

- A. Latest end date
- B. Billing block
- C. Reason
- D. Cancelling party

Answer: C,D

Explanation:

In SAP S/4HANA Service contracts (scope item 3MO), cancellation details at the item level include:

- * Cancelling party: Specifies who initiated the cancellation (e.g., customer or provider), maintained in the contract item data.
- * Reason: A cancellation reason (e.g., customer request) can be recorded for audit and reporting purposes.
- * Latest end date: Defined at the contract header or item validity level, not a cancellation-specific field.
- * Billing block: Applied to block billing but not a cancellation attribute. This is configured in the contract item settings. "Maintain cancelling party and reason at the service contract item level for cancellation tracking." (SAP Help Portal, Service Contract Management).

NEW QUESTION # 76

.....

We all know that pass the C_TS470_2412 exam will bring us many benefits, but it is not easy for every candidate to achieve it. The C_TS470_2412 guide torrent is a tool that aimed to help every candidate to pass the exam. Our C_TS470_2412 exam materials can installation and download set no limits for difficulty of the computers and persons. You can use our C_TS470_2412 Practice Questions directly. We guarantee you that the C_TS470_2412 study materials we provide to you are useful and can help you pass the test.
