CompTIA Advanced Security Practitioner (CASP+) is a certification exam designed for professionals who have advanced-level experience in cybersecurity. CAS-004 exam is designed to test the candidate's knowledge and skills in the areas of enterprise security, risk management, research, and analysis, and integration of computing, communications, and business disciplines. CompTIA Advanced Security Practitioner (CASP+) Exam certification is vendor-neutral, which means that it is not tied to any particular technology or vendor.

CompTIA CAS-004 or the CompTIA Advanced Security Practitioner (CASP+) certification is a globally recognized certification program designed to validate advanced-level security skills and knowledge. The CASP+ certification is ideal for cybersecurity professionals who want to demonstrate their expertise in enterprise security, risk management, and the integration of computing, communications, and business disciplines.

Free PDF CompTIA - Reliable CAS-004 - CompTIA Advanced Security Practitioner (CASP+) Exam Simulated Test

Duration	165 mins
Schedule Exam	CompTIA Marketplace Pearson VUE
Exam Code	CAS-004

CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q559-Q564):

NEW QUESTION # 559

A security analyst is examining a former employee's laptop for suspected evidence of suspicious activity. The analyst uses dd during the investigation. Which of the following best explains why the analyst is using this tool?

- A. To deduplicate unnecessary data from the hard drive
- B. To reverse engineer binary programs
- C. To recover deleted logs from the laptop
- **D. To capture an image of the hard drive**

Answer: D

Explanation:

The dd tool creates a bit-for-bit copy of a hard drive, preserving its contents exactly as they are. This is essential for forensic analysis, as it ensures the integrity of evidence. This aligns with CASP+ objective 5.2, which emphasizes forensic tools and techniques for preserving and analyzing digital evidence.

NEW QUESTION # 560

After establishing coding standards and integrating software assurance tools into CI/CD pipelines, an architect continues to find too many different coding styles throughout the team. Which of the following additional measures can the architect take to help improve consistency?

- A. Require two-person integrity for code commits.
- B. Establish a chain of custody to govern code quality.
- **C. Create and proliferate framework code.**
- D. Enhance the monitoring of code coverage for unit testing.

Answer: C

Explanation:

Framework code provides a standardized structure and set of conventions that all team members can follow, ensuring consistency in coding styles across the development team.

Option A (Chain of custody): This relates to tracking and managing code changes for accountability, not standardizing coding styles.
Option C (Two-person integrity): Ensures review and approval for code changes but does not enforce uniform coding styles.
Option D (Code coverage for unit testing): Focuses on test quality rather than addressing inconsistent coding styles.

NEW QUESTION # 561

An organization is preparing to migrate its production environment systems from an on-premises environment to a cloud service. The lead security architect is concerned that the organization's current methods for addressing risk may not be possible in the cloud environment.

Which of the following BEST describes the reason why traditional methods of addressing risk may not be possible in the cloud?

- A. Risks to data in the cloud cannot be mitigated.
- B. Cloud providers are unable to avoid risk.
- C. Migrating operations assumes the acceptance of all risk.
- D. Specific risks cannot be transferred to the cloud provider.

Answer: D

Explanation:

Reference: <https://arxiv.org/ftp/arxiv/papers/1303/1303.4814.pdf>

NEW QUESTION # 562

A large number of emails have been reported, and a security analyst is reviewing the following information from the emails:

Received: From postfix.com [102.8.14.10]
Received: From prod.protection.email.comptia.com [99.5.143.140]
SPF: Pass
From: <carl.b@comptia1.com>
Subject: Subject Matter Experts
X-IncomingHeaderCount: 4
Return-Path: carl.b@comptia.com
Date: Sat, 4 Oct 2020 12:01:59

As part of the image process, which of the following is the FIRST step the analyst should take?

- A. Ignore the emails, as SPF validation is successful, and it is a false positive
- B. Block the email address carl.b@comptia1.com, as it is sending spam to subject matter experts
- C. Validate the final "Received" header against the DNS entry of the domain.
- D. Compare the "Return-Path" and "Received" fields.

Answer: D

NEW QUESTION # 563

A security analyst is investigating a series of suspicious emails by employees to the security team. The email appear to come from a current business partner and do not contain images or URLs. No images or URLs were stripped from the message by the security tools the company uses instead, the emails only include the following in plain text.

There will soon be a new product launch. Please visit <http://www.comptia.com> for more information.

Which of the following should the security analyst perform?

- A. Block the IP address for the business partner at the perimeter firewall.
- B. Pull the devices of the affected employees from the network in case they are infected with a zero-day virus.
- C. Configure the email gateway to automatically quarantine all messages originating from the business partner.
- D. Contact the security department at the business partner and alert them to the email event.

Answer: D

Explanation:

The best option for the security analyst to perform is to contact the security department at the business partner and alert them to the email event. The email appears to be a phishing attempt that tries to trick the employees into revealing their login credentials by impersonating a legitimate sender. The security department at the business partner should be notified so they can investigate the

source and scope of the attack and take appropriate actions to protect their systems and users. Verified References:
