### NEW QUESTION # 57

Question:

An organization wants to consume compute, network, and storage resources through a self-service portal. Which cloud service model provides this capability?

- A. Data as a Service
- B. Software as a Service
- C. Platform as a Service
- **D. Infrastructure as a Service**

**Answer: D**

Explanation:

Infrastructure as a Service (IaaS) is a cloud computing model that provides virtualized computing resources over the internet. It offers fundamental infrastructure services such as compute, storage, and networking, which users can provision and manage through a self-service portal. This model allows organizations to scale resources as needed and pay only for what they use.

#### NEW QUESTION # 58

Question:

A company is looking for a backup solution that can reduce its IT management overhead and offer scalability and flexibility. Which type of backup solution would meet these requirements?

- A. Image-based backup
- B. Agent-based backup
- **C. Cloud-based backup**
- D. Tape-based backup

**Answer: C**

Explanation:

Cloud-based backup solutions are managed by third-party providers and offer easy scalability, flexibility, and reduced IT management overhead. They allow businesses to focus on operations while the provider manages infrastructure, updates, and capacity.

\* Image-based backup: Captures entire system images but may still require local storage and management.

\* Agent-based backup: Deploys agents to servers, requiring management of the agents.

\* Tape-based backup: Involves hardware and manual processes for storage, increasing management burden.

Which operations management process is responsible for maintaining information about configuration items (CIs)?

- A. Change management
- B. Capacity management
- C. Performance management
- **D. Configuration management**

**Answer: D**

Explanation:

Configuration Management is the process that ensures all configuration items (CIs) are identified, tracked, and maintained throughout their lifecycle. It maintains a Configuration Management Database (CMDB) that records the relationships and configurations of various components in the IT environment.

#### NEW QUESTION # 60

Question:

Which two interfaces does an OSD (Object Storage Device) gateway typically present to applications?

- A. SSH and SMB
- B. File-based interfaces like NFS and CIFS
- C. HTTP and HTTPS
- **D. REST and SOAP APIs**

**Answer: D**

Explanation:

OSD gateways provide access to object storage systems through APIs. The most common interfaces are:

- \* REST (Representational State Transfer): A stateless protocol using standard HTTP methods, widely used for web services.

- \* SOAP (Simple Object Access Protocol): A protocol for exchanging structured information in web services, using XML.

These APIs allow applications to interact with object storage systems over HTTP/HTTPS protocols.

- \* SSH and SMB: SSH is for secure shell access; SMB is for file sharing, not typically used for object storage.

- \* HTTP and HTTPS: These are transport protocols; while used by REST and SOAP, they are not interfaces themselves.

- \* NFS and CIFS: File-based interfaces, not used for object storage.

What is the availability of Port 4 in that week?

- A. 81.6%
- B. 86.7%
- C. 80%
- D. 90%
