It covers a range of topics such as Apex programming, Visualforce, Lightning Components, integration and data management. PDII exam is computer-based and can be taken remotely or at a test center. Passing the PDII Exam requires a score of 65% or higher. Platform Developer II certification demonstrates a developer's ability to design and implement scalable solutions on the Salesforce platform, making them highly valuable to organizations seeking to optimize their Salesforce implementations.

## Salesforce Platform Developer II Sample Questions (Q133-Q138):

### NEW QUESTION # 133

Which three actions must be completed in a Lightning web component for a JavaScript file in a static resource to be loaded? Choose 3 answers

- A. Import the static resource.
- B. Import a method from the platformResourceLoader.
- C. Reference the static resource in a <script> tag.
- D. Append the static resource to the DOM.
- E. Call loadScript.

Answer: A,B,E

### NEW QUESTION # 134

What is the best practice to initialize a Visualforce page in a test class?

- A. Use Test. currantPage .getParamaters put (MyTaestPaga) ;
- B. Use Test. setCurrentPage (Page. MyTeatPage);
- C. Use controller. currentPage. setPage (MyTastfage) ;
- D. Use Test. setCurrentPage MyTestPags;

Answer: B

### NEW QUESTION # 135

Consider the following code snippet:

```
<c-selected-order>
<template for:each={orders.data} item="order">
  <c-order orderId={order.Id}></c-order>
</template>
</c-selected-order>
```

How should the <c-orders> component communicate to the <c-selected-orders component that an order has been selected by the user?

- A. Create and fire a component event.
- B. Create and fire an application event.
- C. Create and dispatch a custom event.
- D. Create and fire a standard DOM event.

Answer: C

### NEW QUESTION # 136

Universal Containers has an Apex trigger on Account that creates an Account Plan record when an Account is marked as a

Customer.

Recently a record-triggered flow was added so that whenever an Account is marked as a Customer, a 'Customer Since' date field is updated with today's date. Since the addition of the flow, two Account Plan records are created whenever the Account is marked as a Customer.

What might cause this to happen?

- A. The flow is configured to evaluate when a record is created and every time it is edited.
- B. The Apex trigger is not bulk safe and calls insert inside of a for loop.
- C. The Apex trigger does not use a static variable to ensure it only fires once.
- D. The flow is configured to use an 'Update Records' element.

**Answer: A**

Explanation:

The reason why two Account Plan records are created whenever the Account is marked as a Customer is that the flow is configured to evaluate when a record is created and every time it is edited. This means that the flow will run both when the Account is inserted and when the Account is updated by the Apex trigger. Since the flow and the trigger both create an Account Plan record, this results in two Account Plan records being created for the same Account. To avoid this, the flow should be configured to evaluate only when a record is created or only when specified changes are made to the record. This way, the flow and the trigger will not conflict with each other and only one Account Plan record will be created. Reference: [Record-Triggered Flows], [Configure When a Record-Triggered Flow Runs]

#### NEW QUESTION # 137

Exhibit:

```
trigger AssignOwnerByRegion on Account ( before insert, before update )
{
    List<Account> accountList = new List<Account>();
    for( Account anAccount : trigger.new )
    {
        Region__c theRegion = [
            SELECT Id, Name, Region_Manager__c FROM Region__c WHERE Name = :anAccount__Region_Name__c];
        anAccount.OwnerId = theRegion.Region_Manager__c; accountList.add( anAccount );
    }
    update accountList;
}
```

Consider the above trigger intended to assign the Account to the manager of the Account's region. Which two changes should a developer make in this trigger to adhere to best practices? Choose 2 answers

- A. Move the Region\_\_c query to outside the loop.
- B. Use a Map to cache the results of the Region\_\_c query by Id.
- C. Remove the last line updating accountList as it is not needed.
- D. Use a Map accountMap instead of List accountList.

**Answer: A,C**

#### NEW QUESTION # 138

.....

The ExamsTorrent offers three formats for applicants to practice and prepare for the Platform Developer II (PDII) exam as per their needs. The pdf format of ExamsTorrent is portable and can be used on laptops, tablets, and smartphones. Print real Platform Developer II (PDII) exam questions in our PDF file.
