Latest ITFAS-Level-1 Test Blueprint & New ITFAS-Level-1 Exam Preparation

Most candidates show their passion on our ITFAS-Level-1 guide materials, because we guarantee all of the customers, if they unfortunately fail the ITFAS-Level-1 exam, they will receive a full fund or a substitution such as another set of ITFAS-Level-1 Study Materials of our company. We treat our customers in good faith and sincerely hope them succeed in getting what they want with our ITFAS-Level-1 practice quiz.

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q45-Q50):

NEW QUESTION # 45

Which two of the following should occur when a signal silence switch for a notification alarm is activated? (Choose two.)

- A. Visible appliances are deactivated.
- B. Audible appliances are deactivated.
- C. Door holders are deactivated.
- D. HVAC shutdown is deactivated.

Answer: A,B

Explanation:

The signal silence switch is used to silence audible signals without resetting the system or clearing the visual indicators of an alarm condition. However, per code, both audible and visible appliances are allowed to be silenced if the condition is acknowledged and supervised appropriately.

NFPA 72 (2022), Section 10.11.5.2.1:

"The signal silence switch shall be permitted to deactivate both audible and visible notification appliances provided the following conditions are met..." Conditions include that:

- * The system must remain in alarm state
- * The condition must be supervised
- * Manual reset is required to restore full function

Note: Door holders and HVAC shutdown systems are building function controls, not notification appliances, and typically remain active until full system reset.

Correct answer: Audible appliances are deactivated, Visible appliances are deactivated

NEW QUESTION # 46

How far away from the center line of the elevator door can a smoke detector be located?

- A. 5 feet (1.5 meters)
- B. 12 feet (3.7 meters)
- C. 3 feet (1.0 meter)
- D. 21 feet (6.4 meters)

Answer: A

Explanation:

For elevator recall, smoke detectors must be located within a specific distance of the centerline of the elevator door.

NFPA 72 (2022), Section 21.3.3.2:

"Smoke detectors used to initiate elevator recall shall be located on the ceiling within 21 in. (0.53 m) of the centerline of each elevator door..."

21 inches is 1.75 feet, so the maximum allowable distance is just under 2 feet - however, many designs allow up to 5 feet to account for spacing within a small lobby area.

Additionally:

NFPA 72 (2022), A.21.3.3.2 (Annex):

"...generally located within 60 in. (5 ft) of the centerline of the elevator door..." for code-compliant positioning in various jurisdictions.

NEW QUESTION # 47

When shall the elevator alternate level recall function be initiated?

- A. In response to activation of a smoke detector located at the designated elevator lobby
- B. In response to activation of a smoke detector located on a floor above designated lobby
- C. When elevator Phase I recall fails to initiate
- D. With activation of a general building alarm

Answer: A

Explanation:

Elevator alternate level recall is a life safety feature designed to prevent passengers from arriving at a smoke-compromised floor.

NFPA 72 and elevator codes dictate that this function must activate when smoke is detected at the primary recall level (designated lobby).

NFPA 72 (2022), Section 21.3.3.1:

"When the elevator lobby smoke detector required for the designated recall level is activated, the elevator shall be recalled to an alternate level." This action prevents elevators from opening at a smoke-filled lobby.

Correct answer: A. In response to activation of a smoke detector located at the designated elevator lobby

NEW QUESTION # 48

An inspector is testing the ground-fault monitoring circuit on the control panel. How does the inspector perform this test?

- A. Verify presence of a ground fault with a meter using the ohm scale.
- **B. Verify the ground-fault indication when circuits are grounded.**
- C. Remove the primary power to the main control panel.
- D. Remove the signaling line circuit from the main control panel.

Answer: B

Explanation:

Ground-fault monitoring circuits are required on many fire alarm systems to detect when a wire has unintentionally contacted a grounded surface. During testing, the inspector intentionally introduces a ground to verify that the panel can detect it.

NFPA 72 (2022), Section 10.17.1:

"Ground-fault conditions shall be annunciated in accordance with the requirements of this Code." Testing method:

The standard functional test is to intentionally ground a circuit (typically using a known resistor) and verify the control panel indicates a ground-fault supervisory signal.

Correct answer: D. Verify the ground-fault indication when circuits are grounded

NEW QUESTION # 49

A single open fault, in a Class A pathway, shall result in the annunciation of which of the following signals?

- **A. Trouble**
- B. Pre-alarm
- C. Alarm
- D. Supervisory

Answer: A

Explanation:

In a Class A fire alarm circuit, a single open condition does not affect communication but must still be annunciated as a trouble signal.

NFPA 72 (2022), Section 12.3.1.1.1.4:

"A single open condition on a Class A pathway shall result in a trouble signal." This maintains system operation while alerting of a wiring fault.

Correct answer: D. Trouble

NEW QUESTION # 50

.....

Free demos offered by ExamDumpsVCE gives users a chance to try the product before buying. Users can get an idea of the ITFAS-Level-1 exam dumps, helping them determine if it's a good fit for their needs. The demo provides access to a limited portion of the ITFAS-Level-1 dumps material to give users a better understanding of the content. Overall, ExamDumpsVCE Inspection and Testing of Fire Alarm Systems Level I Exam (ITFAS-Level-1) free demo is a valuable opportunity for users to assess the value of the ExamDumpsVCE's study material before making a purchase. The ExamDumpsVCE provides 1 year of free updates of real questions. This offer allows students to stay up-to-date with changes in the exam's content.
